WARNING: If the following information in this manual is not followed exactly, a fire or explosion may result causing property damage, personal injury, or loss of life.

-DO NOT STORE OR USE GASOLINE OR OTHER FLAMMABLE VAPORS AND LIQUIDS IN THE VICINITY OF THIS OR ANY OTHER APPLIANCE.

-WHAT TO DO IF YOU SMELL GAS
  * Do not try to light any appliance.
  * Do not touch any electrical switch; do not use any phone in your building.
  * Immediately call your gas supplier from a neighbor's phone.
    Follow the gas supplier's instructions.
  * If you cannot reach the gas supplier, call the fire department.

-Installation and service must be performed by a qualified installer, service agency, or the gas supplier.

-This appliance is intended for supplemental heating.

This is an unvented and vented gas-fired heater. It uses air (oxygen) from the room in which it is installed. Provisions for adequate Combustion and Ventilation Air must be provided. Refer to Section V, page 34.

This appliance may be installed in an aftermarket, permanently located, manufactured (mobile) home, where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases.

WARNING: This appliance is equipped for (natural or propane) gas. Field conversion is not permitted.

INSTALLER: Leave this manual with the appliance.
CONSUMER: Retain this manual for future reference.

SECTION I
SAFETY INFORMATION
WARNINGS

IMPORTANT: READ THIS OWNER'S MANUAL CAREFULLY AND COMPLETELY BEFORE TRYING TO ASSEMBLE, OPERATE, OR SERVICE THE APPLIANCE. IMPROPER USE OF THESE LOGS CAN CAUSE SERIOUS INJURY OR DEATH FROM BURNS, FIRE, EXPLOSION, AND CARBON MONOXIDE POISONING.

Early signs of carbon monoxide poisoning resemble the flu, with headaches, dizziness, and/or nausea. If you have these signs, the heater may not be working properly. Get fresh air at once! Turn off gas. Have burner serviced. Some people (such as pregnant women, persons with heart or lung disease, persons with anemia, those under the influence of alcohol, and those at high altitudes) are more affected by carbon monoxide than others. Make certain you understand and read all Warnings. Keep this manual for reference. It is your guide to safe and proper operation of these logs.

1. Install log set only in a solid-fuel-burning masonry fireplace or U.L. listed pre-fabricated fireplace constructed of non-combustible materials.
2. The installation must conform with local codes or, in the absence of local codes, with the National Fuel Gas Code, ANSI Z223.1/NFPA 54.
3. This appliance may be installed in an After Market* Manufactured (Mobile) Home, where not prohibited by state or local codes.
   (* After Market: Completion of sale, not for purpose of resale from the manufacturer.)

NOTE: This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases.

NOTE: See Section IV for Mobile Home Installation and Producing adequate Combustion and Ventilation Air.

IMPORTANT: VENT-FREE HEATERS ADD MOISTURE TO THE AIR. ALTHOUGH THIS IS BENEFICIAL, INSTALLING HEATER IN ROOMS WITHOUT ADEQUATE VENTILATION MAY CAUSE MILDEW TO FORM FROM TOO MUCH MOISTURE.

4. Never install the log set:
   - In a recreational vehicle.
   - Where curtains, furniture, clothing, or other flammable objects are less than 42" from the front of the heater.
   - In high traffic areas or in windy areas.

NOTE: These log sets comply with both the ANSI Z21.11.2b-2010 "Unvented Room Heater" and ANSI Z21.60b-2004. CSA 2.26-2004 Decorative Appliance For "Solid Fuel Burning Fireplace".

WARNING: ANY CHANGE TO THIS HEATER OR ITS CONTROLS CAN BE DANGEROUS.
5. Two models are available. One specific model for propane (LP) and one for natural gas. Use the correct gas type for your home. This unit is not field convertible.

6. If these gas logs are for use with propane gas, do not place propane supply tank(s) inside any structure. Locate propane supply tank(s) outdoors.

7. If you smell gas:
   - Shut off gas supply.
   - Do not try to light any appliance.
   - Do not touch any electrical switch; do not use any phone in your building.
   - Immediately call your gas supplier from a neighbor's phone. Follow the gas supplier's instructions.
   - If you cannot reach your gas supplier, call the fire department.

8. When operated for the first time, the logs may emit a "paper burning" smell. This smell will gradually diminish and will be totally eliminated after the first few hours of operation. Run the gas logs with the flue damper open during this time. Do not use the blower at this time.

9. This heater shall not be installed in unusually tight construction unless provisions are provided for adequate combustion and ventilation air. "See Section V “Producing Adequate Combustion and Ventilation Air”, page 34.

10. Surface of gas logs becomes very hot when operating. Keep children and adults away from hot surface. Gas logs will remain hot for some time after shutdown. Allow surface to cool before touching.

11. Never place any objects on these gas logs.

12. These gas logs MUST NOT BE USED with glass doors in the closed position.

13. If equipped, fresh air damper must be closed.

14. Keep appliance area clean and free from combustible materials, gasoline, and other flammable vapors and liquids. Keep burner and control compartment clean. See installation and operating instructions accompanying heater.

15. If burner shuts off, do not relight until you provide fresh outside air. If burner keeps shutting off, have unit serviced.

16. An unvented room heater having input rating of more than 10,000 BTU per hour shall not be installed in a bedroom or bathroom.

17. Maintain clearance around air openings.

**WARNING:** This appliance is equipped for (natural or propane) gas. Field conversion is not permitted.
18. Do not use the appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

19. Turn off the gas logs and let cool before servicing.

20. The logs are made of light weight refractory. Hold both ends of the logs when removing or replacing.

21. Make sure any safety screen or guard (if any) that was removed for servicing is in place before operating gas logs.

22. Strong drafts, such as a ceiling fan placed directly in front of the fireplace, may create sooting. Sooting may discolor walls.

23. Installation and repair should be done by a qualified service person. The heater and the gas logs should be inspected before use and at least annually by a professional service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding materials, etc. It is important that the control compartment, burners, and circulating air passageways of these gas logs be kept clean and clear.

24. Do not use these gas logs for burning trash or cooking. Never place matches, paper, garbage or any other material on top of logs or into the flames.

25. Do not install or operate these gas logs in areas where impurities in the air exist (such as tobacco smoke and heavy cooking grease). Particles from impurities may discolor walls.

26. The appliance and its individual shutoff valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressures in excess of 1/2 psi (3.5 kPa).

27. The appliance must be isolated from the gas piping system by closing its individual manual shut off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 PSIG.

28. Any outside air ducts and/or ash dumps in the fireplace shall be permanently closed at time of appliance installation.

29. Due to high temperatures, the appliance should be located out of traffic and away from furniture and draperies.

31. Do not place clothing or other flammable material on or near the appliance.

**WARNING:** State or local codes may only allow operation of this appliance in a vented configuration. Check your state on local codes.
SECTION II
RESIDENTIAL INSTALLATION OF GAS LOGS

FIREPLACE PREPARATION

The fireplace needs to be prepared before installing the gas logs.

A. Turn off the gas supply to the fireplace.
B. Any outside air ducts on the fireplace shall be permanently closed at the time of the appliance installation.

WARNING: BEFORE INSTALLING IN A SOLID FUEL BURNING FIREPLACE, THE CHIMNEY FLUE AND FIREBOX MUST BE CLEANED OF SOOT, CREOSOTE, ASHES AND LOOSE PAINT BY A QUALIFIED CHIMNEY CLEANER.

WARNING: DO NOT ALLOW FANS TO BLOW DIRECTLY INTO THE FIREPLACE. AVOID ANY DRAFTS THAT ALTER BURNER FLAME PATTERN.

LOCATION

Centrally locate the gas logs in the fireplace. Place them deep enough into the fireplace to accomplish adequate draft (if use as a vented gas log set is planned). Ensure that the front of the logs sit inside the front edge of the fireplace.

For your convenience, we have furnished two holes in the back bottom bar of the burner base to fasten it to the floor if you deem it necessary.

NOTE: IF THE EXISTING FIREPLACE IS EQUIPPED WITH A SCREEN IT MUST BE IN PLACE WHEN THE APPLIANCE IS OPERATING. THE SCREEN SHALL HAVE ADEQUATE OPENING(S) FOR INTRODUCTION OF AIR FOR COMBUSTION AND VENTILATION.

NOTE: MAINTAIN PROPER CLEARANCE FOR PURPOSE OF SERVICING, PROPER INSTALLATION, AND OPERATION.

* WARNING: Canopy model number MAPSFP must be used at all times unless a 10-inch mantel is installed at 36-inches above the fireplace opening. (Can be obtained from your local dealer or purchased from the factory.)
WARNING: THIS APPLIANCE IS FOR INSTALLATION ONLY IN A SOLID FUEL BURNING MASONRY OR UL127 FACTORY BUILT FIREPLACE OR IN A LISTED VENTLESS FIREBOX ENCLOSURE.

IT HAS BEEN DESIGN CERTIFIED FOR THESE INSTALLATIONS. EXCEPTION: DO NOT INSTALL THIS APPLIANCE IN A FACTORY BUILT FIREPLACE THAT INCLUDES INSTRUCTIONS STATING IT HAS NOT BEEN TESTED OR SHOULD NOT BE USED WITH UNVENTED GAS LOGS.

INSTALLATION AND CLEARANCES

To ensure a safe installation into an existing solid fuel burning fireplace, the following instructions must be carefully followed.

NOTE: Gas control knobs are located on right side facing unit.

1) Side wall Clearances:
   Clearance from the right and left side of the fireplace opening to any adjacent combustible wall should not be less than 8".

2) Ceiling Clearances:
   The ceiling height should not be less than 42" from the top of the fireplace opening.

3) Mantel Clearances:
   For clearances from top of heater to mantel or mantel supports see Figure 1.

4) Front Clearances:
   No objects should be placed within 24" from the front of the fireplace opening.

MINIMUM FIREPLACE DIMENSIONS FOR LOG SETS MANUFACTURED BY NEW BUCK CORPORATION FOR SOLID FUEL BURNING FIREPLACE OR MASONRY FIREPLACE AND PREFAB OR MANUFACTURED FIREPLACES.

NOTE: When using logsets with the Model 19HS heat shield see page 30 for clearances.

WARNING: ANY CHANGE TO THIS HEATER OR ITS CONTROLS CAN BE DANGEROUS.

WARNING: Cutting any sheet metal parts of the solid-fuel burning fireplace or listed ventless firebox enclosure in which the unvented fireplace insert (log set) is to be installed is prohibited.

NOTE: Smoke shelves, shields and baffles may be removed if attached by mechanical fasteners.

NOTE: Refractory, glass doors, screen rails, screen mesh and solid-fuel log grates (if applicable) can be removed from the fireplace before installing the unvented fireplace insert.

NOTE: Glass doors must be in the open position, and screens must be in place in the closed position when the appliance is in use.
GAS CONNECTION

Check gas type. Use only the type of gas indicated on the valve rating plate. If the type of gas listed on the plate is not your type of gas supply, **DO NOT INSTALL**. Contact your dealer for proper model.

Always use an external regulator for all LP heaters to reduce the supply tank pressure to a maximum of 13” W.C. This is in addition to the regulator furnished with the heater.

**Warning:** Connection directly to an unregulated LP tank can cause an explosion.

The normal gas connection is 3/8” N.P.T. made at the right side facing the log set. If a left side connection is desired, the connecting pipe may be routed under the back of the burner base to terminate at the right hand side for connection to the inlet of the valve.

**NOTE:** The connecting pipe must be internally tinned copper tubing for use with natural gas. Test for leaks using a solution of soap and water after completing the connection. **DO NOT USE OPEN FLAME.**

PREPARING LOG KIT

Open the cartons containing the Burner Base and the logs. Inside one of the cartons you will find the Burner Base. The logs are boxed separately.

**WARNING:** POSITIONING OF LOGS IS VERY CRITICAL (See Figure 2).

LOG PLACEMENT FOR 18 (FIBER) LOG SETS:
1) Place back log (flat faced)#1 on back log support. The log has alignment notches on each corner.
2) Place ember strip (wrapped in cardboard box)#2 on front bottom andirons. Center from side to side.
3) Next place middle log (with ember burn out)#3 over front burner tube. The two ends are notched out on bottom to ensure proper fitting over ends of burner.
4) Right top log is a “y” shaped log #4. The round stem lays in the notched out space on the right top corner of back log. There is a pin on the middle log, and a hole on the flattened end of the top left log. Place hole over pin.
5) Place one end of the left top log #5 in notch of left corner on back log and the other end of the left top log in notch on top middle log.

Solid fuels shall not be burned in the same fireplace where an unvented room heater has been installed.

**NOTE:** The following label has been provided with this appliance and must be read and then attached to the floor of the fireplace or firebox area beneath the appliance. The label is a peel and stick label. Make sure the area is cleaned before attaching the label to it.

**WARNING:** This solid-fuel burning fireplace or listed ventless enclosure has been converted for use with an unvented fireplace insert only. A solid-fuel burning fireplace cannot be used for burning wood or solid fuels unless all original parts have been replaced, and the fireplace re-approved by the authority having jurisdiction. A ventless firebox enclosure cannot be used with an unvented gas log unless all original parts have been replaced, and the ventless firebox enclosure re-approved by the authority having jurisdiction.
WARNING: Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this heater may result in property damage or personal injury.

LOG PLACEMENT FOR MODEL 24 (FIBER) LOG SETS (See Figure 3.)
1) Front log #1 has two notches in bottom of log. Place the log so the notches are over the 3/4” x 3/4” square bar of each leg of burner base.
2) Place middle log #2 over front burner tube. There are alignment notches in each corner.
3) Rear log #3 has notches in both back corners. Place in the back log holders at the rear of the burner base.
4) Place the big end of right top log #4 over pin in the middle of rear logs. The smaller end also has a hole that places over the pin in the middle log.
5) Left top log #5 sits in notches on rear and middle logs.

FIGURE 3
LOG PLACEMENT FOR MODEL 30 (FIBER) LOG SETS:

Repeat steps for Model 24 (Fiber) Log Placement except before placing #1 front log into position, place the retrofit grate that comes with Model 30 logs over the two 3/4" x 3/4" square bar on legs of burner base.

**WARNING:** Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this heater may result in property damage or personal injury.
Open the cartons containing the Burner Base and the logs. Inside one of the cartons you will find the Burner Base. The logs are boxed separately.

**CR18:** 1) Rear Log, 2) Ember strip, 3) Front log, 4) Top Log.

**WARNING:** POSITIONING OF LOGS IS VERY CRITICAL. (See Figure 5.)

**LOG PLACEMENT FOR CR18 LOG SETS:**
1) Place rear log #1 on rear log support. The log has two alignment notches on back.
2) Place ember strip #2 on front bottom andirons. Center from side to side.
3) Next place front log #3 between rear and front burner tubes on the log supports for proper alignment.
4) Left top log #4 has two holes provided to fit over the pins in the front log to insure proper fit.

**WARNING:** Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this heater may result in property damage or personal injury.
CR24 LOG SET  
(WITH DOUBLE BURNER DX24MV LOG BASE)

Open the cartons containing the Burner Base and the logs. Inside one of the cartons you will find the Burner Base. The logs are boxed separately.

**CR24:** 1) Rear Log, 2) Middle Log, 3) Front Log, 4) Right Top Log, 5) Left Top Log, 6) *Extreme Front log used only with C24DTB Tri Burner Base.

**WARNING:** POSITIONING OF LOGS IS VERY CRITICAL. (See Figure 6.)

**LOG PLACEMENT FOR CR24 LOG SETS:**
1) Align the two holes on the bottom of the rear log #1 over rear base legs and slide down to the supports.
2) Place the middle log #2 on the support between the front and rear burner sliding log flush to the back of the support. Center from side to side.
3) Next place front log #3 behind the front of the andirons, resting on top of its legs.
4) Right top log #4 has two holes provided to fit over the pins in the right side of the middle log to ensure proper fit.
5) Left top log #5 has two holes provided to fit over the pins in the left side of the middle log to ensure proper fit.

* NOTE: Discard log #6 on double burner log base.

**WARNING:** Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this heater may result in property damage or personal injury.

![Figure 6](image-url)
CR24 MOUNTAINEER LOG SET
(WITH DOUBLE BURNER DX24MV LOG BASE)

WARNING: POSITIONING OF LOGS IS VERY CRITICAL. (See Figures 6a & 6b)

LOG PLACEMENT FOR CR24 MOUNTAINEER LOG SETS:
1) Align the hole on back of the rear log (#1) with the right rear leg and slide down to the supports. Left side of rear log (#1) will simply rest on left support.
2) Place the middle log (#2) on the support between the front and rear burner sliding log flush to the back of the support. Center from side to side.
3) Next place front log (#3) behind the front of the andirons, resting on top of its legs. Small notch on the right of the log (#3) should line up with the right andiron support.
4) Left top log (#4) has two holes provided to fit over the pins in the left side of the rear log (#1) and the left side middle log (#2) to ensure proper fit.
5) Center top log (#5) has a hole to fit over the pin in the center of the rear log (#1). The other end of the center top log (#5) comes to rest on the flattened area in the center of the middle log (#2).
6) Right top log (#6) has a hole to fit over the pin on the right side of the middle log (#2). The other end of the right top log (#6) comes to rest on the top right of the front log (#3) pointing towards the andiron.

Completed Log Placement (Front View)
Completed Log Placement (Left Angle View)
CR30 LOG SET  
(WITH DOUBLE BURNER DX24MV LOG BASE)

Open the cartons containing the Burner Base and the Log Set. Inside one of the cartons you will find the Burner Base. The Log Set is boxed separately.

**CR30:** 1) Rear Log. 1) Middle Log. 2) Front Logs. 3A, 3B) Right Top Log. 4) Left Top Log 5).

There are (2) two brass round knobs to enhance your Log Set. The knobs are threaded in the bottom. Position the knobs over the threaded studs of the front top andirons and tighten.

Remove the Front Log(s) Base Plate. The Base Plate sets just behind the front andirons with the two (2) locator studs facing upward. Insure that the Base Plate is completely seated on to the log base. See diagram bellow.

**WARNING:** POSITIONING OF THE LOGS IS VERY CRITICAL.

**LOG PLACEMENT FOR CR30 LOG SET (SPLIT FRONT LOG) :**

1) Align the two notches on the bottom rear of the Rear Log #1 over the rear log supports mounted to the rear legs of the burner base.
2) Place the Middle Log #2 on the support between the front and rear burner sliding the log flush to the back of the support. Center the log from side to side.
3) Next place Front Log #3A behind the front of the andirons (left side), resting on the locator stud, which is located on the top of the front log(s) Base Plate. Repeat this step with Front Log #3B (right side). The logs should meet and overlap in the center of the log base.
4) The Right Top Log #4 has (2) two holes provided to insure proper placement. Align the holes in the log with the pins on the right hand side of the Middle Log #2, place the log gently onto the pins.
5) To place the Left Top Log #5 use the (2) holes provided and the pins on the left side of the logs and repeat the steps in #4.
LOG PLACEMENT FOR CR30 LOG SET (SPLIT FRONT LOG):

WARNING: Failure to position the parts in accordance with this diagram or failure to use only parts specifically approved with this heater may result in property damage or personal injury.
CR24 ASPEN LOG SET
(WITH DOUBLE BURNER DX24MV LOG BASE)

**WARNING:** POSITIONING OF LOGS IS VERY CRITICAL.

**LOG PLACEMENT FOR CR24 ASPEN LOG SET:**
1) Align the two holes on the bottom of the rear log #1 over rear base legs and slide down to the supports.
2) Place the middle log (#2) on the support between the front and rear burner sliding log flush to the back of the support. Center from side to side.
3) Next place front log (#3) behind the front of the andirons, resting on top of its legs. Small notch on the right of the log (#3) should line up with the right andiron support.
4) Left top log (#4) has two holes provided to fit over the pins in the left side of the middle log (#1) and the left side front log (#2) to ensure proper fit.
5) Right top log (#5) has a hole to fit over the pins on the right side of the rear log (#1) and the right side middle log (#2) to ensure proper fit.

![Completed Log Placement (Front View)](image1)

![Completed Log Placement (Left Angle View)](image2)
GAS PRESSURE CHECK

Check the inlet pressure to the burner to ensure that it is as shown in the table below. **NOTE:** The pressure check point is located on right side of valve facing the burner.

The appliance and its appliance main gas valve must be disconnected from the gas supply piping system during any pressure testing of that system at test pressure in excess of 1/2 psi (3.5 kPa).

The appliance must be isolated from the gas supply piping system by closing its equipment shut-off valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2 psi (3.5 kPa).

</tr>
</tbody>
</table>

**NOTE:** On initial installation it may be required to bleed out air in the gas lines. Do this by holding the control knob and turning the knob to the pilot position for about 30 seconds.

The pressure should be checked with the heater burning and the control set on high. After measuring the pressure, close pressure tap screw, ensuring there are no leaks. Regulator pressure check screw located above “OFF/ PILOT/ON” knob at right upper corner of valve.

**WARNING:** This appliance is equipped for (natural or propane) gas. Field conversion is not permitted.
OPERATING INSTRUCTIONS
Before operating this appliance, proceed through the following checklist.

1. Read and understand these instructions before operating this appliance.

2. Check that there are no gas leaks. If you smell gas do not attempt to light this appliance.

3. Verify that log placement is correct.

LIGHTING INSTRUCTIONS
SIT-MILLIVOLT VALVE
FOR YOUR SAFETY READ BEFORE LIGHTING

WARNING: If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury, or loss of life.

A. This appliance has a pilot which must be lit by hand. When lighting the pilot follow these instructions exactly. If piezo fails, then light the pilot using matches. Refer to the match lighting instructions.

B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle to the floor.

WHAT TO DO IF YOU SMELL GAS:
* Do not try to light any appliance.
* Do not touch any electric switch; do not use any phone in your building.
* Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
* If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to push in or turn the gas knob. Never use tools. If the knob will not push in or turn by hand, don’t try to repair it. Call a qualified service technician. Force or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any or part of it has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.
**LIGHTING INSTRUCTIONS**

1. **STOP!** Read the safety information on the reverse side of this label (page 17).
2. Make sure manual shutoff valve is fully closed. If equipped with thermostat, set to the lowest setting.
3. Turn off all electrical power to the appliance.
4. Push in gas control knob slightly and turn clockwise to the full “OFF” position.

5. Wait (5) five minutes to clear out any gas. Then smell for gas, including near the floor. If you smell gas, **STOP!** Follow “B” in the safety information on the reverse side of this label. If you don’t smell gas, go to the next step.
6. Find Pilot: follow metal tube from gas control. The pilot is located behind the back burner tube and in front of the rear log. Fully open the manual shutoff valve.
7. Press in and turn knob on gas control counterclockwise to “PILOT” and continue pressing in the knob for (15) fifteen seconds.
8. With control knob pressed in push down (in) and release the igniter button (igniter button is located on the left hand side of the front of the appliance). This will light the pilot. If needed, keep repeating this step until pilot lights.
9. Keep control knob pressed in for (1) one minute after lighting pilot. After (1) minute, release the control knob and it will pop back up. Pilot should remain lit. If pilot goes out, repeat steps 1 through 9.
   - If the knob does not pop up when released, stop and immediately call your service technician or gas supplier.

**NOTE:** Knob cannot be turned from “PILOT” to “OFF” unless knob is pushed in slightly. Do not force.
* If the pilot will not stay lit after several tries, turn the gas control knob to “OFF” and call your service technician or gas supplier.

10. Turn control knob counterclockwise to “ON”.

11. If using unit without wall thermostat place Auto/Off/Manual switch into the manual position. If using wall thermostat place Auto Off Manual Switch into the auto position and place thermostat to a setting higher than the room temperature.

12. Turn on all electrical power to the appliance.

13. Your heater is equipped with a HI & LO control. Turn clockwise for Low and counterclockwise for High.

14. Set thermostat to desired setting.

---

**CAUTION**

DO NOT TRY TO ADJUST HEATING LEVELS BY USING THE MANUAL SHUTOFF VALVE.

---

**TO TURN OFF GAS TO APPLIANCE**

**SHUTTING OFF UNIT**

1. If equipped with thermostat set to lowest setting.
2. Turn control knob clockwise to the full “OFF”.
3. Turn off all electric power to the appliance if service is to be performed.

**SHUTTING OFF BURNER ONLY (Pilot stays lit.)**

1. Turn control knob clockwise to the “PILOT” position.

---

**CAUTION:** Hot while in operation. Do Not Touch. Keep children, clothing, furniture, gasoline, and other liquids having flammable vapors away.

**CAUTION:** DO NOT TRY TO ADJUST HEATING LEVELS BY USING THE MANUAL SHUTOFF VALVE.

---

**WARNING:** Improper installation, adjustment, alteration, service or maintenance can cause property damage, personal injury, or loss of life. Refer to owner’s information manual provided with this appliance. Installation and service must be performed by a qualified installer, service agency, or the gas supplier.

---

**IMPORTANT:** Always operate the appliance at the completely “ON” or the completely “OFF” positions. Never use the heater at a setting between these positions as this can result in improper combustion and excessive carbon monoxide emissions.
1. If the pilot cannot be ignited with the piezo, it can be manually lit with the use of a paper match and lighter rod.

2. Place the match in the holder and light. With the left hand, depress the control knob counterclockwise to “PILOT”. Hold in.

3. Take rod and light match and ignite pilot. The pilot is located behind the right hand side of the front log.

4. Continue to hold the control knob for an additional 1 (one) minute to ensure the pilot is lit.
LIGHTING INSTRUCTION
MODULATING VALVE (SIT)

FOR YOUR SAFETY READ BEFORE LIGHTING

WARNING

IF YOU DO NOT FOLLOW THESE INSTRUCTIONS EXACTLY, A FIRE OR EXPLOSION MAY RESULT CAUSING PROPERTY DAMAGE, PERSONAL INJURY OR LOSS OF LIFE.

A. This appliance has a pilot which must be light by hand. When lighting the pilot, follow these instructions exactly.

B. BEFORE LIGHTING smell all around the appliance area for gas. Be sure to smell next to the floor because gas is heavier than air and will settle on the floor.

WHAT TO DO IF YOU SMELL GAS:

- Do not try to light any appliance.
- Do not touch any electric switch. Do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don’t try to repair it call a qualified service technician. Force or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.
LIGHTING INSTRUCTION

1. **STOP!** Read the safety information on preceding page 21.

2. Set the thermostat to lowest setting.

3. Make sure manual shutoff valve is fully closed.

4. Turn off all electrical power to the appliance.

5. Open access panel door, located at the lower front center of the appliance.

6. Turn control knob clockwise to the full “OFF” position.

7. Wait five (5) minutes to clear out any gas. Then smell for gas, including near the floor. If you smell gas, **STOP!** Follow “B” on preceding page in the Safety Information. If you don’t smell gas, go to the next step.

8. Find Pilot: follow metal tube from gas control. The pilot is located behind the back burner tube and in front of the rear log. Fully open the manual shutoff valve.

9. Press in and turn gas control knob counterclockwise to the “PILOT” position continue pressing in control knob for fifteen (15) seconds.

10. With control knob pressed in, push down (in) and release the igniter button (igniter button is located on the left hand side of the gas control valve). This will light pilot. If needed, keep repeating this step until pilot lights.

11. Keep control knob pressed in for one (1) minute after lighting pilot. After one (1) minute, release control knob and it will pop back up. Pilot should remain lit. If pilot goes out, repeat steps 1 through 9.
   - If the knob does not pop up when released, stop and immediately call your service technician or gas supplier.
   - If the pilot will not stay lit after several tries, turn the gas control knob to “OFF” and call your services technician or gas supplier.
12. Turn gas control knob counterclockwise to “ON” position. Continue to turn the gas control knob counterclockwise to your desired setting.

13. Close access panel door.

14. Turn on all electrical power to the appliance.

15. Set thermostat to desired setting.

**CAUTION**

DO NOT TRY TO ADJUST HEATING LEVELS BY USING THE MANUAL SHUTOFF VALVE.

**TO TURN OFF GAS TO APPLIANCE**

**SHUTTING OFF UNIT**

1. Open access panel door.

2. Set thermostat to lowest setting.

3. Turn gas control knob clockwise to the full “OFF” position.

4. Turn off all electric power to the appliance if service is to be performed.

5. Close access panel door.

**SHUTTING OFF BURNER ONLY (pilot stays lit)**

1. Turn control knob clockwise to the “PILOT” position.

**CAUTION:** Hot while in operation. Do Not Touch. Keep children, clothing, furniture, gasoline, and other liquids having flammable vapors away.

**CAUTION:** DO NOT TRY TO ADJUST HEATING LEVELS BY USING THE MANUAL SHUTOFF VALVE.

**WARNING:** Improper installation, adjustment, alteration, service or maintenance can cause property damage, personal injury, or loss of life. Refer to owner’s information manual provided with this appliance. Installation and service must be performed by a qualified installer, service agency, or the gas supplier.

**IMPORTANT:** Always operate the appliance at the completely “ON” or the completely “OFF” positions. Never use the heater at a setting between these positions as this can result in improper combustion and excessive carbon monoxide emissions.
THERMOSTAT CONTROL OPERATION

The thermostat control used on this heater differs from standard thermostats. Standard thermostats simply turn the burner on and off. The thermostat used on this heater senses the room temperature. The thermostat adjusts the amount of gas flow to the burner. This increases or decreases the burner flame height. At times the room may exceed the set temperature. If so, the burner will shut off. The burner will cycle back on when the room temperature drops below the set temperature. The control knob can be set to any level between LOW and HIGH.

NOTE: The thermostat sensing bulb measures the temperature of air near the heater cabinet. This may not always agree with room temperature (depending on housing construction, installation location, room size, open air temperatures, etc.). Frequent use of your heater will let you determine your own comfort levels.

MANUAL LIGHTING PROCEDURE

1. If the pilot cannot be ignited with the piezo, it can be manually lit with the use of a paper match and lighter rod.

2. Place the match in the holder and light. With the left hand, depress the control knob counterclockwise to “PILOT”. Hold in.

3. Take rod and light match and ignite PILOT. The PILOT is located behind the right hand side of the front log.

4. Continue to hold the control knob for an additional one (1) minute to ensure the pilot is lit.
FOR YOUR SAFETY READ BEFORE LIGHTING

**WARNING**

IF YOU DO NOT FOLLOW THESE INSTRUCTIONS EXACTLY, A FIRE OR EXPLOSION MAY RESULT CAUSING PROPERTY DAMAGE, PERSONAL INJURY OR LOSS OF LIFE.

A. This appliance has a pilot which must be lighted by hand. When lighting the pilot, follow these instructions exactly.

B. **BEFORE LIGHTING** smell all around the appliance area for gas. Be sure to smell next to the floor because gas is heavier than air and will settle on the floor.

**WHAT TO DO IF YOU SMELL GAS:**

- Do not try to light any appliance.
- Do not touch any electric switch. Do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

C. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, don’t try to repair it, call a qualified technician. Force or attempted repair may result in a fire or explosion.

D. **Do not** use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.
1. **STOP!** Read the safety information on preceding page 25.

2. Set the thermostat to lowest setting.

3. Make sure manual shutoff valve is fully closed.

4. Turn off all electrical power to the appliance.

5. Open access panel door, located at the lower front center of the appliance.

6. Turn control knob clockwise \(\rightarrow\) to the full “OFF” position.

7. Wait five (5) minutes to clear out any gas. Then smell for gas, including near the floor. If you smell gas, **STOP!** Follow “B” on preceding page in the Safety Information. If you don’t smell gas, go to the next step.

8. Find Pilot: follow metal tube from gas control. The pilot is located behind the rear burner tube and in front of the rear log. Fully open the manual shutoff valve.

9. Press in and turn gas control knob counterclockwise \(\leftarrow\) to the “PILOT” position continue pressing in control knob for fifteen (15) seconds.

10. With control knob pressed in, push down (in) and release the igniter button (igniter button is located on the left hand side of the gas control valve). This will light pilot. If needed, keep repeating this step until pilot lights.

11. Keep control knob pressed in for one (1) minute after lighting pilot. After one (1) minute, release control knob and it will pop back up. Pilot should remain lit. If pilot goes out, repeat steps 1 through 9.
   - If the knob does not pop up when released, stop and immediately call your service technician or gas supplier.
   - If the pilot will not stay lit after several tries, turn the gas control knob to “OFF” and call your services technician or gas supplier.
12. Turn gas control knob counterclockwise to “ON” position. Continue to turn the gas control knob counterclockwise to your desired setting.
13. Close access panel door.
14. Turn on all electrical power to the appliance.
15. Set thermostat to desired setting.

**CAUTION**
**DO NOT TRY TO ADJUST HEATING LEVELS BY USING THE MANUAL SHUTOFF VALVE.**

**TO TURN OFF GAS TO APPLIANCE**

**SHUTTING OFF UNIT**
1. Open access panel door.
2. Set thermostat to lowest setting.
3. Turn gas control knob clockwise to the full “OFF” position.
4. Turn off all electric power to the appliance if service is to be performed.
5. Close access panel door.

**SHUTTING OFF BURNER ONLY (pilot stays lit)**
1. Turn control knob clockwise to the “PILOT” position.

**CAUTION:** Hot while in operation. Do Not Touch. Keep children, clothing, furniture, gasoline, and other liquids having flammable vapors away.

**CAUTION:** DO NOT TRY TO ADJUST HEATING LEVELS BY USING THE MANUAL SHUTOFF VALVE.

**WARNING:** Improper installation, adjustment, alteration, service or maintenance can cause property damage, personal injury, or loss of life. Refer to owner’s information manual provided with this appliance. Installation and service must be performed by a qualified installer, service agency, or the gas supplier.

**IMPORTANT:** Always operate the appliance at the completely “ON” or the completely “OFF” positions. Never use the heater at a setting between these positions as this can result in improper combustion and excessive carbon monoxide emissions.
THERMOSTAT CONTROL OPERATION

The thermostat control used on this heater is very standard. It simply turns the burner on and off manually. The control knob can be set to any level between HI and LOW.

MANUAL LIGHTING PROCEDURE

1. If the pilot cannot be ignited with the piezo, it can be manually lit with the use of a paper match and lighter rod.

2. Place the match in the holder and light. With the left hand, depress the control knob counterclockwise to “PILOT”. Hold in.

3. Take rod and light match and ignite PILOT. The PILOT is located behind the right hand side of the front log.

4. Continue to hold the control knob for an additional one (1) minute to ensure the pilot is lit.
**BURNER & PILOT FLAME CHECK**

A periodic check of the flames should be made. The pilot flame should always be present when the gas logs are in operation. See figure below.

Rear Flames: The flames at the rear or at either side of the top log should be very similar, yellow in color, and should extend about 3" to 4" above the large rear log for natural gas logs and about 6" for propane (LP) gas log sets.

Front Flame: The flame should be 1-1/2" to 2" high touching front of middle log producing red glowing on this log.

---

**WHEN USED AS A HEATING APPLIANCE**

**HEAT OUTPUT**

The heat output into the room can be controlled by the position of the flue damper, when used as “vented gas logs”. See Section VI - Vented Models.

The heat output is controlled by the “ON/OFF” switch or wall thermostat, not by the control knob. The gas logs are either “ON” or “OFF”.

The gas logs may be used as non-vent gas logs only where permitted by local state and city codes. If non-vent gas logs are not permitted, then the fireplace vent area required by local codes must be met. **In the absence of local codes, the latest edition of the National Fuel Gas Code (ANSI Z223.1) must be met.**
For installation of gas supply see “Fireplace and Gas Connection” in Section II, page 8.

**NOTE:** Centrally locate the Heat Shield in the fireplace and place it deep enough into the fireplace to accomplish adequate draft (if use as a vented heater is planned). Ensure that the Heat Shield front is inside the front edge of the fireplace, see Figure 8. Using the screws and anchor provided, fasten the Heat Shield to the floor of the fireplace. On each side of floor frame of Heat Shield base, there is a “go through hole”. Position the Heat Shield as described above. Mark the hole for drilling. See Figure 8.

**NOTE:** When using Log Sets with optional Heat Shield the following minimums must be met:

- 18 - Front 25" - Rear 23" - Height 20" - Depth 19 1/2"
- 24 - Front 30" - Rear 29" - Height 20" - Depth 19 1/2"
- 30 - Front 36" - Rear 32" - Height 20" - Depth 19 1/2"

To avoid any movement of the gas log set during operation, screw the base to the floor of the fireplace using the screws provided. Then follow log positioning in Section II.

**NOTE:** For the first few hours of burning, you will have a paint and burning smell. It is recommended to leave the fan off during this period. You may also want to raise a window or open the doors.
REPLACEMENT PARTS
FOR (OPTIONAL) HEAT SHIELD MODEL 19HS

Always include correct name, part number, and model number of the heater when ordering service parts.

**WARNING:** CHILDREN AND ADULTS SHOULD BE ALERTED TO THE HAZARDS OF HIGH SURFACE TEMPERATURES AND SHOULD STAY AWAY TO AVOID BURNS OR CLOTHING IGNITION. YOUNG CHILDREN SHOULD BE CAREFULLY SUPERVISED WHEN THEY ARE IN THE SAME ROOM AS THESE GAS LOGS.

**WARNING:** Clothing or other flammable material should not be placed on or near this appliance.

---

**WIRING DIAGRAM**
(For Optional Heat Shield Model 19HS)

![Wiring Diagram](image)

**NOTE:** If any of the original wire supplied with the appliance must be replaced, it must be replaced with a wire of at least a 105°C. temperature rating.

**NOTE:** Installation and repair should be done by a qualified service person. This heater should be inspected before use and at least annually by a qualified service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding material, etc. It is imperative that control compartments and circulating air passageways of the heater be kept clean.

**CAUTION:** Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation.

Verify proper operation after servicing.
**WARNING:** Electrical Grounding Instructions—This appliance is equipped with three-prong grounding plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle.

**WARNING:** Do not use a blower insert, heat exchanger insert or other accessories not approved for use with this heater.

**WARNING:** The motor is permanently lubricated. Do not add any type of lubricant.
SECTION IV
AFTER MARKET MOBILE HOME INSTALLATION

THIS APPLIANCE MAY BE INSTALLED IN AN AFTERMARKET*, PERMANENTLY LOCATED, MANUFACTURED (MOBILE) HOME, WHERE NOT PROHIBITED BY LOCAL CODES. *After Market: Completion of sale, not for the purpose of resale from the manufacturer.

THIS APPLIANCE IS ONLY FOR USE WITH THE TYPE OF GAS INDICATED ON THE RATING PLATE. THIS APPLIANCE IS NOT CONVERTIBLE FOR USE WITH OTHER GASES.

SECTION V
PRODUCING ADEQUATE COMBUSTION AND VENTILATION AIR

The National Fuel Gas Code, ANSI Z223.1/NFPA 54 defines unusually tight construction or unconfined space as a space whose volume is less than 50 cubic feet per 1,000 BTU per hour (4.8 m$^3$ per kw) of the aggregate input rating of all appliances installed in that space and an unconfined space as a space whose volume is not less than 50 cubic feet per 1,000 BTU per hour (4.8 m$^3$ per kw) of the aggregate input rating of all appliances installed in that space. Rooms communicating directly with the space in which the appliances are installed, through openings not furnished with doors, are considered a part of the unconfined space.

WARNING: IF THE AREA IN WHICH THE HEATER MAY BE OPERATED IS SMALLER THAN THAT DEFINED AS AN UNCONFINED SPACE OR IF THE BUILDING IS OF UNUSUALLY TIGHT CONSTRUCTION, PROVIDE ADEQUATE COMBUSTION AND VENTILATION AIR BY ONE OF THE METHODS DESCRIBED IN THE NATIONAL FUEL GAS CODE, ANSI Z223.1/NFPA 54, SECTION 5.3 OR APPLICABLE LOCAL CODES.

Unusually tight construction is defined as construction where:

A) Walls and ceilings exposed to the outside atmosphere have a continuous water vapor retarder with a rating of 1 perm (6 x $10^{-11}$ kg per pa-sec-m$^2$) or less with openings gasketed or sealed.

B) Weather stripping has been added on openable windows and doors.

C) Caulking or sealants are applied to areas such as joints around window and door frames, between sole plates and floors, between wall-ceiling joints, between wall panels, at penetrations for plumbing, electrical, and gas lines, and at other openings.
NOTICE

SOME AREAS IN THE UNITED STATES HAVE HIGHER REQUIREMENTS FOR CUBIC FEET PER 1000 BTU/HOUR INPUT. (EX. CINCINNATI, OHIO CODES REQUIRE 70 CUBIC FEET). CHECK YOUR LOCAL CODE BEFORE INSTALLATION.

DETERMINING FRESH-AIR FLOW FOR HEATER LOCATION

DETERMINE IF YOU HAVE UNUSUALLY TIGHT CONSTRUCTION OR UNCONFINED SPACE

Use this worksheet to determine if you have unusually tight construction or unconfined space.

SPACE: Includes the room in which you will install heater plus adjoining rooms with doorless passageways or ventilation grills between the rooms.

1. Determine the volume of the space (length x width x height).
   
   Length x Width x Height =________ cu.ft. (volume of space)
   
   EXAMPLE: 20 ft.(Length) x 16 ft.(Width) x 8 ft.(ceiling Height)=
   
   2560 cu. ft. (volume of space)

   If additional ventilation to adjoining room is supplied with grills or openings, add the volume of these rooms to the total volume of the space.

2. Divide the space volume by 50 cubic feet to determine the maximum BTU/Hr the space can support.
   
   _________ (volume of space)/50 cu. ft. = maximum BTU/Hr the space can support)

   EXAMPLE: 2560 cu. ft. (volume of space /50 cu. Ft = 51.2 or 51200 (maximum BTU/Hr the space can support)

3. Add the BTU/Hr of all fuel burning appliances in the space.

   Vent-free heater
   Gas water heater*
   Gas furnace
   Vented gas heater
   Gas fireplace logs
   Other gas appliances*

   Total

   +

   =

   BTU/Hr

   BTU/Hr

   BTU/Hr

   BTU/Hr

   BTU/Hr

   BTU/Hr

   BTU/Hr
Example: Gas water heater 40000 BTU/Hr
        Vent-free heater + 18000 BTU/Hr
        Total = 58000 BTU/Hr

*Does not include direct-vent gas appliances. Direct-vent draws combustion air from the outdoors and vents to the outdoors.

4. Compare the maximum BTU/Hr the space can support with the actual amount of BTU/Hr used.

        ______________BTU/Hr (maximum the space can support)
        ______________BTU/Hr (actual amount of BTU/Hr used)

Example: 51200 BTU/Hr (maximum the space can support)
        58000 BTU/Hr (actual amount of BTU/Hr used)

The space in the above example is unusually tight construction because the actual BTU/Hr used is more than the maximum BTU/Hr the space can support. You must provide additional fresh air. Your options are as follows:

A. Rework worksheet, adding the space of an adjoining room. If the extra space provides an unconfined space, remove door to adjoining room or add ventilation grills between rooms. See “Air For Combustion And Ventilation Inside Building”, page 37.
B. Vent room directly to the outdoors. See “Air For Combustion And Ventilation Outdoors”, page 38.
C. Install a lower BTU/Hr heater, if lower BTU/Hr size makes room unconfined.

If the actual BTU/Hr used is less than the maximum BTU/Hr the space can support, the space is an unconfined space. You will need no additional fresh air ventilation.

<table>
<thead>
<tr>
<th>WARNING</th>
</tr>
</thead>
<tbody>
<tr>
<td>YOU MUST PROVIDE ADDITIONAL COMBUSTION AND VENTILATION AIR IN UNUSUALLY TIGHT CONSTRUCTION.</td>
</tr>
</tbody>
</table>
AIR FOR COMBUSTION AND VENTILATION INSIDE BUILDING

This fresh combustion and ventilation air would come from an adjoining unconfined space. When ventilating to an adjoining space, you must provide two permanent openings: one within 12" of the ceiling and one within 12" of the floor on the wall connecting the two spaces (See options 1 and 2, Figure 9). You can also remove door into adjoining room (See option 3, Figure 9).

WARNING

Rework worksheet, adding the space of the adjoining unconfined space. The combined spaces must have adequate amount of air to supply all appliances in both spaces.

NOTE: Each opening shall have a minimum free area of 1 square inch per 1000 BTUs per hour of the total input rating of all gas utilization equipment in the confined space, but not less than 100 square inch.

Figure 9
AIR FOR COMBUSTION AND VENTILATION OUTDOORS

Provide extra fresh combustion and ventilation air by using ventilation grills or ducts. You must provide two permanent openings: one within 12” of the ceiling and one within 12” of the floor. Connect these items directly to the outdoors. These spaces include attics and crawl spaces. Follow the National Fuel Gas Code **NFPA 54/ANSI Z223.1**, Section 5.3, Air For Combustion and Ventilation for required size of ventilation grills or ducts.

**IMPORTANT:** Do not provide openings for inlet air into attic if attic has a thermostat-controlled power vent. Heated air entering the attic will activate the power vent.

---

**WARNING**

THIS HEATER MUST HAVE ADEQUATE AMOUNT OF AIR FOR PROPER OPERATION. IF NOT, POOR FUEL COMBUSTION COULD RESULT. READ THE FOLLOWING INSTRUCTIONS TO ENSURE PROPER AMOUNT OF AIR FOR THIS AND OTHER FUEL-BURNING APPLIANCES IN YOUR HOME.

---

**Figure 10**
SECTION VI
VENTED

(1) This appliance must be installed only in a solid-fuel burning fireplace with a working flue and constructed of non-combustible materials.

(2) A minimum of 34 sq. in. (Min. 6" chimney) or see page 41, permanent flue opening must be provided by either the fireplace chimney or chimney damper to vent the flue gases.

(3) Solid fuels shall not be burned in a fireplace where a decorative appliance is installed.

(4) Any chimney damper must be fixed in a manner which will maintain the minimum permanent vent opening at all times. See figure 11.

NOTE: See chart on page 41.

MINIMUM FIREPLACE DIMENSIONS FOR LOG SETS MANUFACTURED BY NEW BUCK CORPORATION FOR SOLID FUEL BURNING FIREPLACE OR MASONRY FIREPLACE AND PREFAB OR MANUFACTURED FIREPLACES.

NOTE: When using logsets with the Model 19HS heat shield see page 30 for clearances.

IMPORTANT SAFEGUARDS

Although your gas logs are very realistic in appearance, it is not a real burning fireplace and must not be used for burning solid fuel.

To avoid irreparable damage to the heater or personal injury, matches, paper, garbage, or any other material must not be placed or thrown on top of the logs or into the flames.

To avoid personal injury, do not touch hot surfaces when the heater is operating. Close supervision is necessary when the heater is being operated near children.

NOTE: An annual examination and cleaning of the venting system of the solid-fuel burning fireplace, must be done by a qualified agency.

WARNING: ALL THE LOGS ARE MANUFACTURED FROM BONDED CERAMIC FIBER. THIS IS A COMMONLY USED MATERIAL IN INDUSTRY WORLDWIDE. IN THE EVENT OF THE LOG BEING REMOVED, CARE SHOULD BE TAKEN TO NOT DAMAGE THE BONDED MATERIAL.

INTENTIONAL MISUSE OR DELIBERATELY FRAGMENTING THE MATERIAL COULD LEAD TO INHALING FIBERS AND BE INJURIOUS TO YOUR HEALTH.

THE HEATER IS INTENDED FOR USE AS A GAS HEATER MOUNTED IN A VENTED OR VENT-FREE FIREPLACE AS DESCRIBED IN THESE INSTRUCTIONS. IT SHOULD NOT BE USED FOR ANY OTHER PURPOSE.

CLEANING

CAUTION: BEFORE CLEANING OR MOVING LOGS OR OTHER PARTS OF THE HEATER, BE SURE TO READ THE ABOVE SECTION ON “IMPORTANT SAFEGUARDS”.

All cleaning should be carried out when the heater is cold. Only limited cleaning will be required under normal use. Dusting the front of the base, the top of the piezo cover, or the control knob panel may be required occasionally. Do not use any cleaning fluids to clean the logs or any other part of the heater.

If the flames show any unusual shapes or behavior, or if the burners fail to ignite properly, then the burner holes may require cleaning. If this occurs, it is preferable to contact your nearest dealer to get your heater serviced.

Alternatively, the heater can be cleaned by removing the top, front, and rear logs. Handle the logs gently so as not to damage the fiber pieces. Always lift each log by holding it carefully at each end. Use a vacuum cleaner to carefully remove dust and loose particles from the base, logs, and from around the burners. Gloves are recommended to prevent the fibers from breaking your skin. If the skin is broken, wash gently with soap and water.

WARNING: Failure to keep the primary air opening(s) of the burner(s) clean may result in sooting and property damage.
## TROUBLESHOOTING

### WARNING
TURN OFF, UNPLUG HEATER AND LET COOL BEFORE SERVICING. ONLY A QUALIFIED SERVICE PERSON SHOULD SERVICE AND REPAIR HEATER.

### CAUTION
NEVER USE A WIRE, NEEDLE, OR SIMILAR OBJECT TO CLEAN ODS/PILOT. THIS CAN DAMAGE ODS/PILOT.

</table>
**WARNING**

**IF YOU SMELL GAS:**
* SHUT OFF GAS SUPPLY
* DO NOT TRY TO LIGHT APPLIANCE
* DO NOT TOUCH ANY ELECTRICAL SWITCH; DO NOT USE ANY PHONE IN YOUR BUILDING
* IMMEDIATELY CALL YOUR GAS SUPPLIER FROM A NEIGHBOR’S PHONE. FOLLOW THE GAS SUPPLIER’S INSTRUCTIONS.
* IF YOU CANNOT REACH YOUR GAS SUPPLIER, CALL THE FIRE DEPARTMENT.

**IMPORTANT:** Operating heater where impurities in the air exist may create odors. **Cleaning** supplies, paint, paint remover, cigarette smoke, cements and glues, new carpet or textiles, etc. create fumes. These fumes may mix with combustion air and create odors.

NOTE: You may want to have your chimney cleaned by a professional before installing unit.

SERVICING

Repair and replacement work should only be done by a qualified service person.

Always shut off the gas supply and make sure that heater is cool before beginning any service operation. Always check for gas leaks after servicing.

REPLACEMENT PARTS

SIT MILLIVOLT VALVE 18”, 24: BASE FOR LOG SETS

A parts list with exploded view follows. Always include correct name, part number and model number of the heater when ordering service parts.

**REPAIR PARTS**

A parts list with exploded view follows. Always include correct name, part number, and model number of the heater when ordering service parts. Please contact your local dealer or distributor when ordering. If one is not available, you may contact.

New Buck Corporation  
PO Box 69  
200 Ethan Allen Drive  
Spruce Pine, NC 28777
NEW BUCK CORPORATION
200 ETHAN ALLEN DRIVE
SPRUCE PINE, NC  28777

We reserve the right to amend these specifications at any time without notice. The only warranty applicable is our standard written warranty. We make no other warranty, expressed or implied.

LIMITED WARRANTY
VENT-FREE AND VENTED GAS LOGS

New Buck warrants this product to be free from defects in materials and components for two (2) years from the date of first purchase, provided that the product has been properly installed, operated and maintained in accordance with all applicable instructions. To make a claim under this warranty the Bill of Sale or canceled check must be presented.

This warranty is extended only to the original retail purchaser. This warranty covers only the cost of part(s) required to restore this heater to proper condition. Warranty part(s) MUST be obtained through authorized dealers of this product and/or New Buck who will provide original factory replacement parts. Failure to use original factory replacement parts voids this warranty. The heater MUST be installed by a qualified installer in accordance with all local codes and instructions furnished with the unit.

This warranty does not apply to parts that are not in original condition, because of normal wear and tear, or parts that fail or become damaged as a result of misuse, accidents, lack of proper maintenance or defects caused by improper installation.

What is not covered:
* Removal and re-installation costs.
* Labor costs for replacement or repairs.
* Transportation or labor costs.
* The cost of a service call to diagnose trouble.
* Painted surfaces.
* Damage or defect caused by improper installation, accident, misuse, abuse, or alteration.

TO THE FULL EXTENT ALLOWED BY THE LAW OF THE JURISDICTION THAT GOVERNS THE SALE OF THE PRODUCT, THIS EXPRESS WARRANTY EXCLUDES ANY AND ALL OTHER EXPRESSED WARRANTIES AND LIMITS THE DURATION OF ANY AND ALL IMPLIED WARRANTIES, INCLUDING WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE TO ONE (1) YEAR FROM THE DATE OF FIRST PURCHASE. NEW BUCK LIABILITY IS HEREBY LIMITED TO THE PURCHASE PRICE OF THE PRODUCT AND NEW BUCK SHALL NOT BE LIABLE FOR ANY OTHER DAMAGES WHATSOEVER INCLUDING INDIRECT, INCIDENTAL OR CONSEQUENTIAL DAMAGES.
Some states do not allow a limitation on how long an implied warranty lasts or an exclusion or limitation of incidental or consequential damages, so the above limitation on implied warranties, or exclusion or limitation on damages may not apply to you.

This warranty gives you specific legal rights, and you may also have other rights that vary from state to state.

**OWNER REGISTRATION**

The attached owner registration card must be completed in its entirety and mailed within 30 days from date of installation in order for warranty coverage to begin to:

New Buck Corporation  
P.O. Box 69  
Spruce Pine, NC 28777  
Email: info@buckstove.com

PLEASE NOTE: Owner Registration Card must contain Authorized Buck Stove Dealer Number and Certified Installer’s number (if applicable) for warranty coverage to begin.
