## PRODUCT SPECIFICATIONS

## TECHNICAL DATA

## HEAT RECOVERY VENTILATOR

### DESCRIPTION

Heat Recovery Ventilators are the complete whole house ventilation system designed to bring a continuous supply of fresh air into the house while exhausting an equal amount of stale air.

### CASING

Steel casing is covered with high-quality multilayer aluminium and zinc alloy to prevent corrosion. The casing is equipped with a switch to turn the ventilator off when the service panel is opened.

### FILTER

Washable MERV 6 air filters in exhaust and supply air streams.

Optional supply: anti grease aluminum filter.

Heat recovery core

The aluminum cross-flow core ensures efficient heat recovery.

### DIMENSIONS

### DEFROST SYSTEM

To protect the heat recovery core, the freezing electronic protection system is applied. It switches the supply fan off as the temperature sensor requires. Warm extract air defrosts the heat recovery core, then the supply fan switches on and the ventilator continues operating under rated conditions.

### MOTOR

German made high-efficient motor combined with backward inclined impeller delivers exceptionally powerful airflow and high static pressure. Built-in thermal overheating protection with automatic restart makes the motor operation secure and reliable. Permanently lubricated ball bearings inside the motor provide long (40000 hours) trouble- and maintenance-free operation.

### FANS

The ventilator is equipped with supply and exhaust centrifugal fans with forward inclined blades and built-in thermal overheating protection with automatic restart.

The electric motors and the impellers are dynamically balanced in two planes.

### CONTROL

The ventilator is supplied with a thyristor speed control.

The unit can be equipped with wide range of additional controls (page 24) to switch boost on demand.

### WARRANTY

5 year warranty

2016-10
