
Kit Parts Number: PSNEU02

Parts List:

1. (1) Bag of Filter Material

NOTICE

The depletion of the neutralization media depends upon the operation of the Prestige Boiler. To determine the necessary refill interval, check media level several times during the first year of operation. As a minimum the media should be replaced annually to maintain a pH value above 6.5.

Instructions:

1. Loosen the hose clamp and remove the boiler condensate drain hose from the condensate neutralizer.
2. Unscrew the end cap from the condensate neutralizer and discard any remaining media.
3. Refill the condensate neutralizer with the filter media and reattach the end cap.
4. Ensure that both barbed fittings are clear of any obstruction and re-attach the boiler condensate hose. Secure using the hose clamp.
