SERIAL #:

H-Burner MODELS

H-Burner Kit	Description	Natural Gas (NG)
FG-H-24SSK	24" x 6" H-Burner	90,000 Btu's
FG-H-30SSK	30" x 6" H-Burner	120,000 Btu's
FG-H-36SSK	36" x 6" H-Burner	150,000 Btu's
FG-H-48SSK	48" x 6" H-Burner	170,000 Btu's

Outdoor Fire Pit Burners

Installation and Operating Instructions

IF YOU CANNOT READ OR UNDERSTAND THESE INSTALLATION INSTRUCTIONS DO NOT ATTEMPT TO INSTALL OR OPERATE THIS APPLIANCE

INSTALLATION PRECAUTION:

This system requires a minimum 18 square inches (per side) of cross ventilation. Failure to provide proper ventilation will void the warranty.

Warning: For Outdoor Use Only

We recommend that our gas hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Gas Specialists.

DANGER

CARBON MONOXIDE HAZARD

This appliance can produce carbon monoxide which has no odor.

Using it in an enclosed area can kill you.

Never use this appliance in an enclosed space such as a camper, tent, car or home.

DANGER

If you smell gas:

1. Shut off gas to the appliance
2. Extinguish any open flame.
3. If odor continues, keep away from the appliance and immediately call your gas supplier or fire department.

WARNING

Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or other appliances.

Any LP cylinder not connected for use shall not be stored in the vicinity of this or other appliances.

WARNING

Do not leave unattended during use.
Do not use for cooking.
Follow all gas leak procedures in this manual prior to operation.

WARNING

Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Read the installation, operating and maintenance instructions thoroughly before installing or servicing this equipment.

WARNING

If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or death.

FOR YOUR SAFETY

Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or other appliances.

Fuels used in gas fired appliances, and the products of combustion such as fuels, contain chemicals known to cause cancer, birth defects and/or other reproductive harm.

This warning is issued pursuant to the California Health & Safety Code Sec. 25249.1

CALIFORNIA PROPOSITION 65

WARNING

This product can expose you to Chromium, which is known to the state of California to cause cancer and birth defects or other reproductive harm.
(For more information, go to www.p65warnings.ca.gov)

CAUTION

All media (i.e. lava rock, lava stones, lava boulders and fire glass) has the potential of thermal spalling. This is a process that may occur when media is wet and moisture gets trapped inside of the material due to rapid temperature differences. When this happens the media has the potential to crack or “pop” outside the fire feature.

WE HIGHLY RECOMMEND COVERING ALL FIRE FEATURES WHEN NOT IN USE

The use of a cover can lessen the impact of thermal spalling; however, heavy rains, high humidity and the presence of moisture may still cause the media to pop.

ALWAYS USE CAUTION WHEN USING THE FIRE FEATURE

Extra caution should be taken when lighting a fire feature when heavy rains, high humidity and moisture are present. Light the fire feature; leave the area allowing any moisture in the media to dissipate. We strongly recommend that during this drying out time that you monitor the fire feature from a distance. This drying out period should be no less than 30 minutes. Continue monitoring the flame from distance to ensure that all popping has ceased before fully enjoying the fire.

SPECIFICATIONS

Table 1 H-burner specifications

BEFORE INSTALLING THE H-BURNER DETERMINE WHAT PAN WILL BE USED:

The H-Burner models above are not provided with pans for installation. We suggest you provide an appropriate non-combustible burner pan to install the H-Burner. Burner pans sizes listed in Table 1 are suggested sizes based on the H-Burner model size. The pans should be rectangular with metal sides or a flat metal disc. **NOTE:** It is recommended to use 304 Stainless Steel. Burner pans should have ¼" drainage holes to prevent standing water in pan and the center hole/slot for the burner venturi tube should be 1" x 5 ½" diameter. A recommended material thickness for any burner pan or disc is 16 gauge. When or if a burner pan is chosen then proceed with this manual to complete the installation.

CAUTION: DO NOT use stiff screen or perforated metal as a burner pan. Some gases are heavier than air and screen or perforated metal can enable the gas to flow down inside an enclosure which could cause delayed ignitions or explosions.

Fig. 1 H-Burner Dimensions (length & width); refer to Table 1.

Fig. 2 Clearance to Combustibles (Not to be used in an enclosed space)

Models:	Factory Orifice NG	BTU's NG	Factory Orifice LP	Btu's LP
FG-H-24SSK	H-OAS-NG22 (4.0mm)	90,000	H-OAS-LP37 (2.6mm)	88,000
FG-H-30SSK	H-OAS-NG13 (4.7mm)	120,000	H-OAS-LP31 (3.0mm)	117,000
FG-H-36SSK	H-OAS-NG06 (5.2mm)	150,000	H-OAS-LP29 (3.5mm)	150,000
FG-H-48SSK	H-OAS-NG02 (5.6mm)	170,000	H-OAS-LP27 (3.7mm)	168,500

Table 2 Btu Specifications

Disclaimer: Btu listings are based on 7.0"WC for Natural Gas and 11.0"WC for Liquid Propane (LP) at the burner orifice. Flex line size and proper gas pipe sizing will also affect Btu's. As a result your Btu's may vary slightly from Table 2 specifications.

Pressure	NG	LP
Min. Inlet	3.5" WC	8.0" WC
Max. Inlet	10.5" WC	13.0" WC
Normal Inlet	7.0" WC	11.0" WC

Table 3 Gas Pressures

PREPARING A NON-COMBUSTIBLE STRUCTURE

The fire pit can be installed on a flat, stable surface, away from any combustible materials. Install Fire pit on any level, outdoor non-combustible, flat stable surface or a combustible floor according to the clearances specified in this manual. **NOTE:** Do not place fire pit directly on grass, dirt, or rocks this may prevent proper ventilation. **Ensure proper water drainage is also incorporated into the fire pit enclosure.**

HARD PIPING TO FIRE PIT WITHOUT GAS PROXIMITY

NOTE: Refer to the NFPA54 (National Fuel Gas Code) for proper pipe sizing. See gas line sizing chart on page 6 as a reference.

1. Turn **OFF** gas supply system. **NOTE:** All gas connections (except for brass to brass) require the following. **A)** Clean pipe threads using either a wire brush or steel wool. **B)** Apply pipe sealant to the fittings before making connections.
2. Ensure all gas connections are snug, but do not over tighten! **BE CAREFUL!**
3. Install necessary pipe for the distance required and a manual shut-off valve at the exterior house wall. Check with local codes for proper procedures. If pipe is to pass through a foundation or house wall, make sure to seal the area around the pipe with weather sealant. Consult a plumber for proper installation to ensure you are providing adequate gas supply for your application.
4. The primary gas shut-off (not supplied) will require a 1/2" male flared fitting to enable connection of the stainless steel flex gas line supplied with the fire pit (see Fig. 6 page 9).
5. Do not place an LP tank inside any fire pit enclosure. Locate all Liquid Propane (LP) tanks outside the enclosure.
6. To prevent performance problems with LP gas fire pits, do not use a LP tank less than 100lbs. capacity.

WARNING: Proper clearances from combustible materials must be maintained from all sides, top and bottom of this appliance. Use the specifications listed on this page for proper clearance to combustibles (See Table 1 and Fig. 2).

IMPORTANT

Installation of Natural or LP gas should be done by a qualified installer, service agency or gas supplier. This appliance must be isolated from the gas supply piping system by closing its manual shutoff valve during any pressure testing of the gas supply piping system at test pressures equal to or less than 1/2" psi (3.5kPa)

HIGH ELEVATION INSTALLATION

This appliance is listed for elevations from 0-4500 feet in Canada and the U.S. If elevation exceeds 4500 feet it may be necessary to decrease the input rating by changing the existing burner orifice to a smaller size. Input should be reduced 4% for each 1000 feet beyond the 4500 feet above sea level. Check with your local gas utility for assistance in determining the proper orifice in your location. In some cases the heating value may already be reduced and downsizing the orifice may not be necessary.

VENTILATION FOR NON-COMBUSTIBLE ENCLOSURE

Fire pits are subjected to many outdoor elements such as rain, snow, wind, heat or cold. **A minimum of 18 square inches (opposite sides) of cross ventilation is required to keep the components in good working order.** Use Fig 3 as guide to assist to incorporate proper ventilation.

Fig. 3 Cross Ventilation Example

GAS PIPE SIZING CHART

NATURAL GAS : PIPE SIZING CHART

Length of Pipe in Feet	1/2"	3/4"	1"	1 - 1/4"	1 - 1/2"	2"	2 - 2 1/2"	3"	4"
10	108	230	387	793	1237	2259	3640	6434	-

60	42	89	159	336	513	957	1559	2684	5647
70	38	82	149	317	476	896	1447	2492	5250
80	36	76	140	299	443	840	1353	2315	4900
90	33	71	133	275	420	793	1288	2203	4667
100	32	68	126	266	411	775	1246	2128	4518
125	28	60	117	243	369	700	1143	1904	4065
150	25	54	105	215	327	625	1008	1689	3645
175	23	50	93	196	303	583	993	1554	3370
200	22	47	84	182	280	541	877	1437	3160
300	17	37	70	145	224	439	686	1139	2539

- Natural Gas (NG) flow is given in thousands of BTU/hr. = 1 cubic foot of NG gas - 1000 BTU
- Nominal pressure at the burner for Natural Gas is 3.5" of water column. (Typical machine supply 5"-7")
- Pipe length must include additional length for all fittings. Add approximately 5 feet of pipe per fitting.
- Natural Gas Example: A machine with a burner that requires 440,000 BTU would need a 1 -1/4" pipe for a 20" long run.

LIQUID PROPANE : PIPE SIZING CHART

Length of Pipe in Feet	1/2"	3/4"	1"	1 - 1/4"	1 - 1/2"	2"	2 - 2 1/2"	3"	4"
10	275	567	1071	2205	3307	6221	10140	17990	35710
20	189	393	732	1496	2299	4331	7046	12510	25520
30	152	315	590	1212	1858	3465	5695	10110	20620

150	48	100	185	390	590	1138	1808	3210	6549
175	43	90	168	353	534	1030	1637	2905	5927
200	40	83	155	325	491	947	1505	2671	5450
300	37	77	144	303	458	887	1404	2492	5084

- Liquid Propane (LP) Gas flow is given in thousands of BTU/hr. = 1 cubic foot of LP gas - 2500 BTU.
- This chart refers to low pressure LP, after regulation, Standard nominal pressure at the burner for Liquid Propane Gas is 11" of water column.
- Pipe length must include additional length for all fittings. Add approximately 5 feet of pipe per fitting.
- LP Example: A machine with a burner that requires 440,000 BTU would need a 1" pipe for a 20' long run.

NOTE: The sizing charts above list the specific pipe sizes required for the amount of BTU's for a new gas line installations. If you are using an existing gas line you must take into consideration the existing gas line capacities to ensure you will have proper pressure. **This chart is for reference only, we recommend you consult with a Licensed Plumber/Gas Fitter or NFPA54 (National Fuel Gas Code - current edition) for more details.**

Table 4 Gas Pipe Sizing Chart

INSTALLATION OF FIRE PIT INTO AN APPROVED ENCLOSURE

REQUIREMENTS

1. Only non-combustible materials should come in direct contact with any part of the fire pit. Underneath area should be non-combustible or a flat level combustible surface according to the clearances specified in this manual..
2. Refer to the NFPA54 (National Fuel Gas Code) for proper pipe sizing. Determine the size of the fire pit you are preparing to install (Refer to page 6)..
3. Determine the size of the rectangular fire pit you are preparing to install (Refer to page 4).
4. You must provide a rectangular opening to install the fire pit into the non-combustible enclosure. A minimum burner pan dimension is listed in Table 1.
5. Follow the local code requirements for the gas type being used. This fire pit should be installed in accordance with local codes and ordinances or in the absence of local codes, with the latest National Fuel Gas Code, ANSI Z223.1 NFPA54 or CSA B149.1, Natural and Propane Installation Code in Canada.
6. Fire pits create high temperatures, it is very important to have any combustibles at a safe distance.
7. Do not fill the enclosure cavity with gravel, rock or sand. The enclosure requires free flowing air underneath to keep it cool and provide ventilation to prevent moisture, and additional provided an outlet for gas to escape if a leak occurs.
8. **CAUTION: A minimum of 18 square inches of cross ventilation (per opposite sides) is required to keep the enclosure dry.**
9. These products are designed for outdoor use only. **Not approved for any indoor use or any enclosed space.**
10. This fire pit is designed to have Firegear Outdoors lava rock or glass media completely covering the burner tube, so that the burner is not visible. Do not cover more than 1" above the top of burner. Use lava rock a minimum of 1" diameter as a base to fill the burner pan. **DO NOT USE STONE OR RIVER ROCK.**
11. Gas lines and fittings must be installed in to the non-combustible structure. All gas connections must be leak tested before installation of the fire pit. Soapy water leak detection is required before regular use of the fire pit.
12. Do not use material that will absorb moisture over time and will not release this moisture quickly. Moisture can boil in this material and can rapidly break apart and cause damage or personal injury.
13. Never leave any combustible material on top of the fire pit. This could cause unsafe operation of this system and damage to the component that will not be covered under our warranty.
14. **Ensure proper water drainage is also incorporated into the fire pit enclosure.**

H-BURNER INFORMATION

All H-Burners come ready to install and have a ½" male center nipple. The H-Burner must be installed as shown in Fig. 4 with center nipple facing downward. Ensure to seal each NPT fitting with thread tape or pipe compound.

NOTE: Flared fittings do not require tape or compound.

H-Burner Kit: Included H-Burner, orifice, flared fitting, manual key valve with 12-inch key and 28" flex connector.

H-BURNER ASSEMBLY

Although, a pan is not required, the H-Burner needs a center hole/slot 1" x 5 1/2" if a pan is being used. We recommend using a pan for all applications especially Propane or LP gas installations. Once the H-Burner is placed into the center hole of your fire pit pan then install a flex gas line (T100-9898-28) as shown in Fig. 6. **Note:** Use Teflon tape or pipe compound rated for gas to seal all NPT threads.

Fig. 4 Installing H-Burner into a pan.

INSTALLING KEY VALVE

Note: It is recommended to use the key valve assembly provided in the H-Burner kit. Otherwise, you will need to provide a key valve for the installation.

The key valve contents: 1- key valve, 1- key and 1- flange. (See Fig. 6). The valve requires a 1 1/4" round clearance hole in the non-combustible enclosure wall. See the instructions supplied with the key valve for more specific details.

Note: Be sure to leak test all fittings before operation. Fig. 6 on page 9 shows an example of a typical installation.

Fig. 5 Key valve components.

TYPICAL INSTALLATION DRAWINGS

NOTE: Key valve and flexible gas lines are supplied. Gas shut-off is not supplied.

Key Valve Side View Detail

Note: A 1¼" x 2" black iron or galvanized coupler/nipple (not supplied) can be used as a spacer between the manual valve and the valve flange to add additional support to hold the manual key valve in place.

OPERATION

CAUTION: Children and adults should be alerted to the hazards on high surface temperatures and should stay away to avoid burns or clothing ignition. Young children should be carefully supervised when they are in the area of the appliance.

WARNING: Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of control system and any gas control, which has been under water.

SAFETY WARNINGS

1. Never leave the fire pit unattended during operation.
2. Clothing or other flammable materials should not be placed on or near the appliance.
3. Any guard or other protective device removed for servicing the appliance must be replaced prior to operating the appliance.
4. Installation and repair should be done by a qualified service person. The appliance should be inspected before use and at least annually by a qualified service person. More frequent cleaning may be required as necessary. It is imperative the control compartment, burners and circulating air passageways of the appliance be kept clean.
5. Inspect the fuel supply connection before each use of the appliance.
6. Temporary storage of this appliance indoors is permissible only if it has been disconnected from its fuel supply (Natural or Propane gas line).

WARNING

1. This appliance is hot when operated and can cause severe burns if contacted.
2. Do not burn any solid fuels in this appliance.

LIGHTING INSTRUCTIONS

READ ALL WARNING AND SAFETY INFORMATION ABOVE BEFORE ATTEMPTING TO LIGHT FIRE PIT

CAUTION: Ensure you have leak tested the fire pit before operating.

TURNING ON FIRE PIT

1. Insert key into shut-off valve and secure into square end (See Figs. 7 & 8).
2. Light a long match or butane lighter and hold it near the burner (See Fig. 9).
3. Turn the key slowly counter-clockwise in key valve (ON position) to allow gas to flow and simultaneously apply the long burning match or Butane lighter as close to the end of the burner as possible to light the fire pit.
4. Gas should ignite within 10 seconds or less. If fire pit does not light within 10 seconds turn key clockwise to turn **OFF** the gas supply. Ensure there is not too much media on top of the burner that might inhibit gas flow and try again in 5 minutes.

TURNING OFF FIRE PIT

1. Insert key into shut-off valve and secure into square end.
2. Turn key clockwise until it stops.
3. After cooling off install cover.

Fig. 7 Key Valve Face

Fig. 8 Inserting Key into Valve

Fig. 9 Lighting fire pit with lighter

H-BURNER REPLACEMENT PARTS

Drawings not to scale.

H-BURNER REPLACEMENT PARTS

Item	Description	Qty.	Part Number

CONVERTING H-BURNER TO LP GAS

This instruction will properly convert the fire pit from Natural gas to Propane (LP) gas. Follow the steps below to proceed. See Table 2 on page 5 for proper LP orifice.

Step 1: Shut OFF gas supply.

Step 2: Remove media from fire pit.

Step 3: Carefully lift fire pit out of the enclosure.

Step 4: Remove the 3/8" flex connector from the main burner orifice. See Fig. 10 for reference.

Fig. 10 Shows main burner orifice location.

Step 5: Remove the flared fitting. Inside the end of the flared fitting is the main burner orifice. Remove the burner orifice and replace it with the new LP orifice for the correct model fire pit.

3/8" Flared Fitting

Fig. 11 Shows main burner orifice.

Step 6: After the main burner orifice and brass fitting is removed then slide the air shutter sleeve off the burner tube and expose the hole for the LP gas (Figs. 12 & 13).

Fig. 12. Natural gas setting; air shutter sleeved installed.

Fig. 13 LP gas setting; air shutter sleeved removed.

Step 7: Install the main burner orifice and brass fitting back into the burner tube.

Step 8: Reattach the 3/8" flex connector to the flared fitting.

Step 9: Reinstall media.

Step 10: Installation is complete. Reinstall the fire pit into the enclosure, turn ON the gas supply and conduct a leak test before presuming normal use with the fire pit.

Model	LP Conversion Kit
FG-H-24SSK	H-OAS-LP37
FG-H-30SSK	H-OAS-LP31
FG-H-36SSK	H-OAS-LP29
FG-H-48SSK	H-OAS-LP27

Table 5 Conversion kits

Note: No Teflon tape or thread compound is required when threading brass to brass fittings.

FIRE PIT MAINTENANCE

1. The fire pit should be inspected and cleaned before initial use at least annually by a qualified field service person.
2. Any component that is found faulty must be replaced with an approved component.
3. Any tampering or modifying with the fire pit is dangerous and voids all warranties.
4. During winter months in cold climates and various seasons operation the fire pit may be affected by weather conditions. It is recommended to use a ventilated cover ovetop of your fire pit to protect it from humid/rainy weather conditions when not in use. Heavy rains/downpours could affect the fire pit operation if not covered; if this occurs ensure you allow the fire pit time to dry out before attempting to operate. **NOTE:** If a combustible type cover is used over the fire pit when not in use be sure to remove it before operation to prevent a severe safety hazard.
5. Over time stainless steel parts can discolor when heated, usually a golden or brown hue. This discoloration is normal and does not affect the performance of the appliance.

TROUBLE SHOOTING

Symptom

Remedy

Fire pit won't light

1. Bleed gas line.
2. Ensure all gas supply lines are turned ON.
3. Ensure there is not too much media ovetop of burner; it can inhibit gas from flowing.
4. Check gas pressure.

Low flame

1. Ensure the base media is at least 1-inch in diameter and top media is no more than 1-inch over top of burner.
2. Ensure all shut-off valves and key valve is fully open. See page 7; Fig. 6.
3. Check gas pressure.

Water in my fire pit

1. Excess dust/sand material from media may be blocking the weep holes to relieve water. Remove all media and unplug weep holes. Clean or install new media free of dust and dirt.
2. Ensure fire pit enclosure has proper drainage for water and proper ventilation to dry out.

H-Burner Kit Contents

ACCESSORIES

The following accessories are available from your local Firegear Outdoors dealer/distributor.

LIMITED WARRANTY

Skytech Products Group (Firegear Outdoors) hereby warrants to the end user that products will be free from material and workmanship defects that prevent safe and correct operation of the product. The warranty commences from date of sale to the end user for the following period:

CONSUMER/NON-COMMERCIAL APPLICATIONS:

Stainless Steel Components	5 Years
Gas Valve, Spark Igniter & Electronic Parts	2 Years
Log Sets	5 Years
Glass Windshields	5 Years
Glass Media	1 Year
Controls	5 Years
AnF Enclosures	5 Years
GFRC (Glass Fiber Reinforced Concrete)	1 Year

Lava Rock and Lava Stones are not covered by warranty

COMMERCIAL APPLICATIONS:

Stainless Steel Components	1 Year
Gas Valve, Spark Igniter & Electronic Parts	1 Year
Log Sets	1 Year
Glass Windshields	1 Year
Glass Media	1 Year
Controls	1 Year
AnF Enclosures	1 Year
GFRC (Glass Fiber Reinforced Concrete)	1 Year

Lava Rock and Lava Stones are not covered by warranty

End User must provide a bill of sale, canceled check, or payment record from the end user to verify purchase date and to establish warranty period. This Limited Warranty shall be valid and limited to the original purchaser only.

WARNING Any modification to the product will void the warranty.

This Limited Warranty shall be limited to the repair and/or replacement of parts that have proven to be defective under normal use and service. Before returning any parts, contact our Technical Service Department for a Return Materials Authorization (RMA) number. All warranty claims must be made by the OEM / Distributor / Dealer account on behalf of the end user. You may contact Technical Service at (855) 498-8324.

All approved returned defects must be confirmed by our Technical Service Department. If the defect is confirmed and we approve the claim, we will replace such parts without charge. This warranty gives you specific legal rights, and you may also have other rights, which vary from state to state.

Travel, diagnostic cost, service labor to repair the defect and freight charges on warranty parts to and from the factory will be responsibility of the owner. We will not be responsible for labor charges and/or damage incurred in installation, repair, and replacement.

This Limited Warranty is voided if not assembled, installed and operated as intended. This Limited Warranty does not cover any defects due to accident, abuse, misuse, alteration, misapplication, vandalism, improper installation or improper maintenance or service, removal from the original location or re- installation into another location, or failure to perform normal and routine maintenance.

Damage due to severe weather conditions such as hail, hurricanes, earthquakes, tornadoes, discoloration due to overheating, exposure to chemicals (including salt), either directly or in the atmosphere, or very high humidity, is not covered by this Limited Warranty.

There are no other express warranties except as set forth herein. For consumer applications, any applicable implied warranties of merchantability and fitness are limited induration to the period of coverage of this Limited Warranty. Some states do not allow limitation on how long an implied warranty lasts, so this limitation may not apply to you.

For Commercial applications, the liability of Firegear Outdoors is limited to the express terms of this warranty. We expressly disclaim any and all implied warranties, including any warranties of fitness for a particular purpose or merchantability.

We are not liable for any special, indirect or consequential damages. Our maximum liability is limited to the purchase price of the purchased products. Some states do not allow the exclusion or limitation of incidental or consequential damages, so this limitation or exclusions may not apply to you.

We do not authorize any person or company to assume for it any other obligation or liability in connection with the sale, installation, use, removal, return, or replacement of its equipment; and no such representations are binding.

REV. 6/18
