

# Installation Manual

## Installation and appliance setup

**INSTALLER:** Leave this manual with party responsible for use and operation.  
**OWNER:** Retain this manual for future reference.

**NOTICE:** DO NOT discard this manual!

outdoor  
**lifestyles**  
by hearth & home technologies®

**Model:**  
**ODLANAIG-51**

### **DANGER:**

If you smell gas:

1. Shut off gas to the appliance.
2. Extinguish any open flame.
3. If odor continues, keep away from the appliance and immediately call your gas supplier or fire department.

### **WARNING:** For outdoor use only.

### **WARNING:**

Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance  
An LP-cylinder not connected for use Shall not be stored in the vicinity of this or any other appliance

### **WARNING! Risk Of Fire!**

Do not install glass doors on this fireplace.  
Glass doors could cause overheating of adjacent structures.

### **WARNING:**

Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. Read the installation, operating and maintenance instructions thoroughly before installing or servicing this equipment.

# **DANGER**

### **Carbon Monoxide Hazard**

This appliance can produce carbon monoxide which has no odor.

Using it in an enclosed space can kill you.

Never use this appliance in an enclosed space such as a camper, tent, car or home

## ▲ Safety Alert Key:

- **DANGER!** Indicates a hazardous situation which, if not avoided will result in death or serious injury.
- **WARNING!** Indicates a hazardous situation which, if not avoided could result in death or serious injury.
- **CAUTION!** Indicates a hazardous situation which, if not avoided, could result in minor or moderate injury.
- **NOTICE:** Used to address practices not related to personal injury.

# Standard Work Checklist

## Attention Installer: Follow this Standard Work Checklist

This standard work checklist is to be used by the installer in conjunction with, not instead of, the instructions contained in this installation manual

Customer: _____	Date Installed: _____
Lot/Address _____	Location of fireplace _____
_____	Installer _____
_____	Dealer/Distributor Phone # _____
Model ODLANAIG-51	Serial # _____

 **WARNING! Risk of Fire or Explosion!** Failure to install appliance according to these instructions could lead to a fire or explosion.

### Appliance Install Section 3 & 4 (page 7-14)

	YES	IF NO, WHY?
Required non-combustible board is installed.	<input type="checkbox"/>	_____
Verified clearances to combustibles.	<input type="checkbox"/>	_____
Fireplace is leveled and secured.	<input type="checkbox"/>	_____

### Electrical Section 5 (page 15-18)

Unswitched power (110-120Vac.) provided to the appliance.	<input type="checkbox"/>	_____
Switch wires properly installed.	<input type="checkbox"/>	_____

### Gas Section 6 (page 19-21)

Proper appliance for fuel type.	<input type="checkbox"/>	_____
Was a conversion performed?	<input type="checkbox"/>	_____
Leak check performed and inlet pressure verified.	<input type="checkbox"/>	_____

### Finishing Section 7 (page 22-24)

Combustible materials not installed in non-combustible areas.	<input type="checkbox"/>	_____
Verified all clearances meet installation manual requirements.	<input type="checkbox"/>	_____
Mantels and wall projections comply with installation manual requirements.	<input type="checkbox"/>	_____

### Appliance setup Section 8 (page 25)

All packaging and protective materials removed (inside and outside of appliance).	<input type="checkbox"/>	_____
Media installed correctly.	<input type="checkbox"/>	_____
Optional screen or trim kit properly installed.	<input type="checkbox"/>	_____
Manual bag and all of its contents are removed from inside/under the appliance and given to party responsible for use and operation.	<input type="checkbox"/>	_____
Started appliance and verified no gas leak exists.	<input type="checkbox"/>	_____

### Hearth & Home Technologies recommends the following:

- Photographing the installation and copying this checklist for your file.
- That this checklist remain visible at all times on the appliance until the installation is complete.

# 1 Product Specific Information

## A. Appliance Certification

**Model:** ODLANAIG-51  
**Laboratory:** Canadian Standards Association (CSA)  
**Type:** Outdoor Decorative Gas Appliances  
**Standard:** ANSI Z221.97-2014, CSA 2.41-2014

This product is listed to ANSI standards for “Outdoor decorative Gas appliances” and “Gas Fired Appliances for Use at High Altitudes”.

**Notice:** This installation must conform with local codes. In the absence of local codes you must comply with the National Fuel Gas Code, ANSI Z223.1- latest edition in the U.S.A. and the CAN/CGA B149 Installation codes in Canada.

When an appliance is for connection to a fixed piping system, the installation must conform with local codes, or in the absence of local codes with the National Fuel Gas Code, ANSI Z223.1/NFPA 54, or International Fuel Gas Code.

## B. BTU Specifications

Model	Gas Type	Max Input BTU	Natural Orifice Size
ODLANAIG-51	Natural	55,000	(2) #32
	Propane	53,000	(2) # 52

## C. High Altitude Installations

Notice: If the heating value of the gas has been reduced, these rules do not apply. Check with your local gas utility or authorities having jurisdiction.

When installing above 2000 feet elevation:

- In the USA: reduce input rate 4% for each 1000 feet above 2000 feet.
- In CANADA: Input ratings are certified without a reduction of input rate for elevations up to 4500 feet (1350m) above sea level. Please consult provincial and/or local authorities having jurisdiction for installations at elevations above 4500 feet (1370m.)

Check with your local gas utility to determine proper orifice size.

## D. Non-combustible Materials Specification

Material which will not ignite and burn. Such materials are those consisting entirely of steel, iron, brick, tile, concrete, slate, glass, plasters or any combination thereof.

Materials that are reported as passing **ASTM E 136, Standard Test Method for Behavior of Materials in a Vertical Tube Furnace at 750 °C** shall be considered non-combustible materials.

## E. Combustible Materials Specification

Materials made of or surfaced with wood, compressed paper, plant fibers, plastics, or other material that can ignite and burn, whether flame proofed or not, or plastered or unplastered shall be considered combustible materials.

## F. Electrical Codes

Notice: This appliance must be electrically wired and grounded in accordance with local codes or, in the absence of local codes, with **National Electric Code ANSI/NFPA 70-latest edition or the Canadian Electrical Code CSA C22.1.**

- A 110-120Vac. circuit for this product must be protected with ground-fault circuit-interrupter protection, in compliance with the applicable electrical codes.

## G. Fuel

This appliance must not be used to burn solid fuel. When an appliance is connected to a fixed piping system, the installation must conform with local codes, or in the absence of local codes with the **National Fuel Gas Code, ANSI Z223.1/NFPA 54, or International Fuel Gas Code.**

 **WARNING: This product and the fuels used to operate this product (liquid propane or natural gas), and the products of combustion of such fuels, can expose you to chemicals including benzene, which is known to the State of California to cause cancer and reproductive harm. For more information go to: [www.P65Warnings.ca.gov](http://www.P65Warnings.ca.gov).**

## 2 Getting Started

### A. Design and Installation Considerations

The Lanai series gas appliance is designed for outdoor use and may be installed as a stand alone unit or built into a wall.

An outdoor space is defined as follows:

1. An appliance is considered to be outdoors if installed with shelter no more inclusive than:
2. With walls on all sides, but no overhead cover
3. Within a partial enclosure which includes an overhead cover and no more than two side walls. These side walls may be parallel, as in a breezeway, or at right angles to each other; or
4. Within a partial enclosure which includes an overhead cover and three sidewalls, as long as 30% or more of the horizontal periphery of the enclosure is permanently open.

The appliance may be installed on a wood or non-combustible deck. Refer to section three for clearances. Installation **MUST** comply with local, regional, state and national codes and regulations. Consult the authorities having jurisdiction over restrictions, installation inspection and permits.

Before installing, determine the following:

- Where the appliance is to be installed.
  - Clearances to side walls.
  - Location of indoor appliance terminations, air inlets, gas meters, etc.
  - Location of the fireplace to a door that swings open to ensure it doesn't interfere with the fireplace when opened
  - Location of Windows.
  - Location of Walkways.
  - Possibility of flooding or running water.
- Gas supply piping requirements.
- Electrical wiring requirements.
- Framing and finishing details.

### B. Tools and Supplies Needed

Before beginning the installation be sure that the following tools and building supplies are available.

Tape Measure	Framing material
Pliers	Hammer
Phillips screwdriver	Manometer
Gloves	Framing square
Voltmeter	Electric drill and bits (1/4 inch)
Plumb line	Safety glasses
Level	Reciprocating saw
3/4 inch wrench	Crescent wrench
7/8 inch wrench	1/4 inch nut driver
7/16 inch wrench	pipe sealant
Flat head screwdriver	
Non-corrosive leak check solution	
1/2 - 3/4 inch length, #6 or #8 Self-drilling screws	
Caulking material (300°F Minimum continuous exposure rating.)	

myhht  
FACTORY  
training

Installation and service of this appliance should be performed by qualified personnel. Hearth & Home Technologies recommends HHT Factory Trained or NFI certified professionals

Improper installation, adjustment, alteration, service or maintenance can cause injury or property damage. For assistance or additional information, consult a qualified service technician, service agency or your dealer.

## C. Inspect Appliance and Components

- Carefully remove the appliance and components from the packaging.
- Remove non-combustible material located on the back side of the appliance.
- Remove deflection glass and eyebrow located on the backside of the appliance.
- Remove crystal media which is packaged separately and located on top of the appliance.
- Remove wall control which is packaged separately and located on top of the appliance.
- Remove protective coating.
- Report any components damaged in shipping to your dealer.
- Read all of the instructions before starting the installation. Follow these instructions carefully during the installation to ensure maximum safety and benefit.

**WARNING! Risk of Fire or Explosion!** Damaged parts could impair safe operation. **DO NOT** install damaged, incomplete or substitute components.

Hearth & Home Technologies disclaims any responsibility for, and the warranty will be voided by, the following actions:

- Installation and use of any damaged appliance.
- Modification of the appliance.
- Installation other than as instructed by Hearth & Home Technologies.
- Improper positioning of the media.
- Installation and/or use of any component part not approved by Hearth & Home Technologies.

**Any such action may cause a fire hazard.**

**WARNING! Risk of Fire, Explosion or Electric Shock!**

**DO NOT** use this appliance if any part has been under water. Call a qualified service technician to inspect the appliance and to replace any part of the control system and/or gas control which has been under water.

# 3 Framing and Clearances

## A. Appliance Dimension Diagrams

Dimensions are actual appliance dimensions. Use for reference only. For framing dimensions and clearances refer to Figure 3.2 and Figure 3.4.

### ODLANAIG-51

Note: All measurements are in inches

Figure 3.1. Appliance Dimensions – ODLANAIG-51

## B. Clearances to Combustibles

When selecting a location for the appliance, it is important to consider the required clearances to walls (see Figures 3.2, 3.3, and 3.4.)

**WARNING! Risk of Fire or Burns!** *Provide adequate clearance around air openings and for service access. Due to high temperatures, the appliance should be located out of traffic and away from furniture and draperies.*

**WARNING! Risk of Fire or Burns!** *The appliance is hot and wind may cause flames to reach out in front.*

- Keep furniture, draperies and other combustibles away.
- Locate the appliance away from traffic areas.
- Clean up fallen leaves, branches and other combustible materials before using the appliance.
- See Figure 3.2, 3.3 and 3.4 for required clearances.
- Only install on wood or solid noncombustible surfaces extending full width and depth to prevent damage.

**WARNING! Risk of Fire!** *Maintain specified air space clearances to appliance:*

- *Insulation and other materials must be secured to prevent accidental contact.*
- The chase/enclosure must be properly blocked to prevent blown insulation or other combustibles from entering and making contact with the appliance.
- Failure to maintain air space may cause overheating and a fire.

# ODLANAIG-51

NOTICE: Illustrations reflect typical installations and are FOR DESIGN PURPOSES ONLY. Illustrations/ diagrams are not drawn to scale. Actual installation may vary due to individual design preference.

Figure 3.2. Appliance Locations and Framing Dimensions - ODLANAIG-51

## C. Vent Minimum Clearances

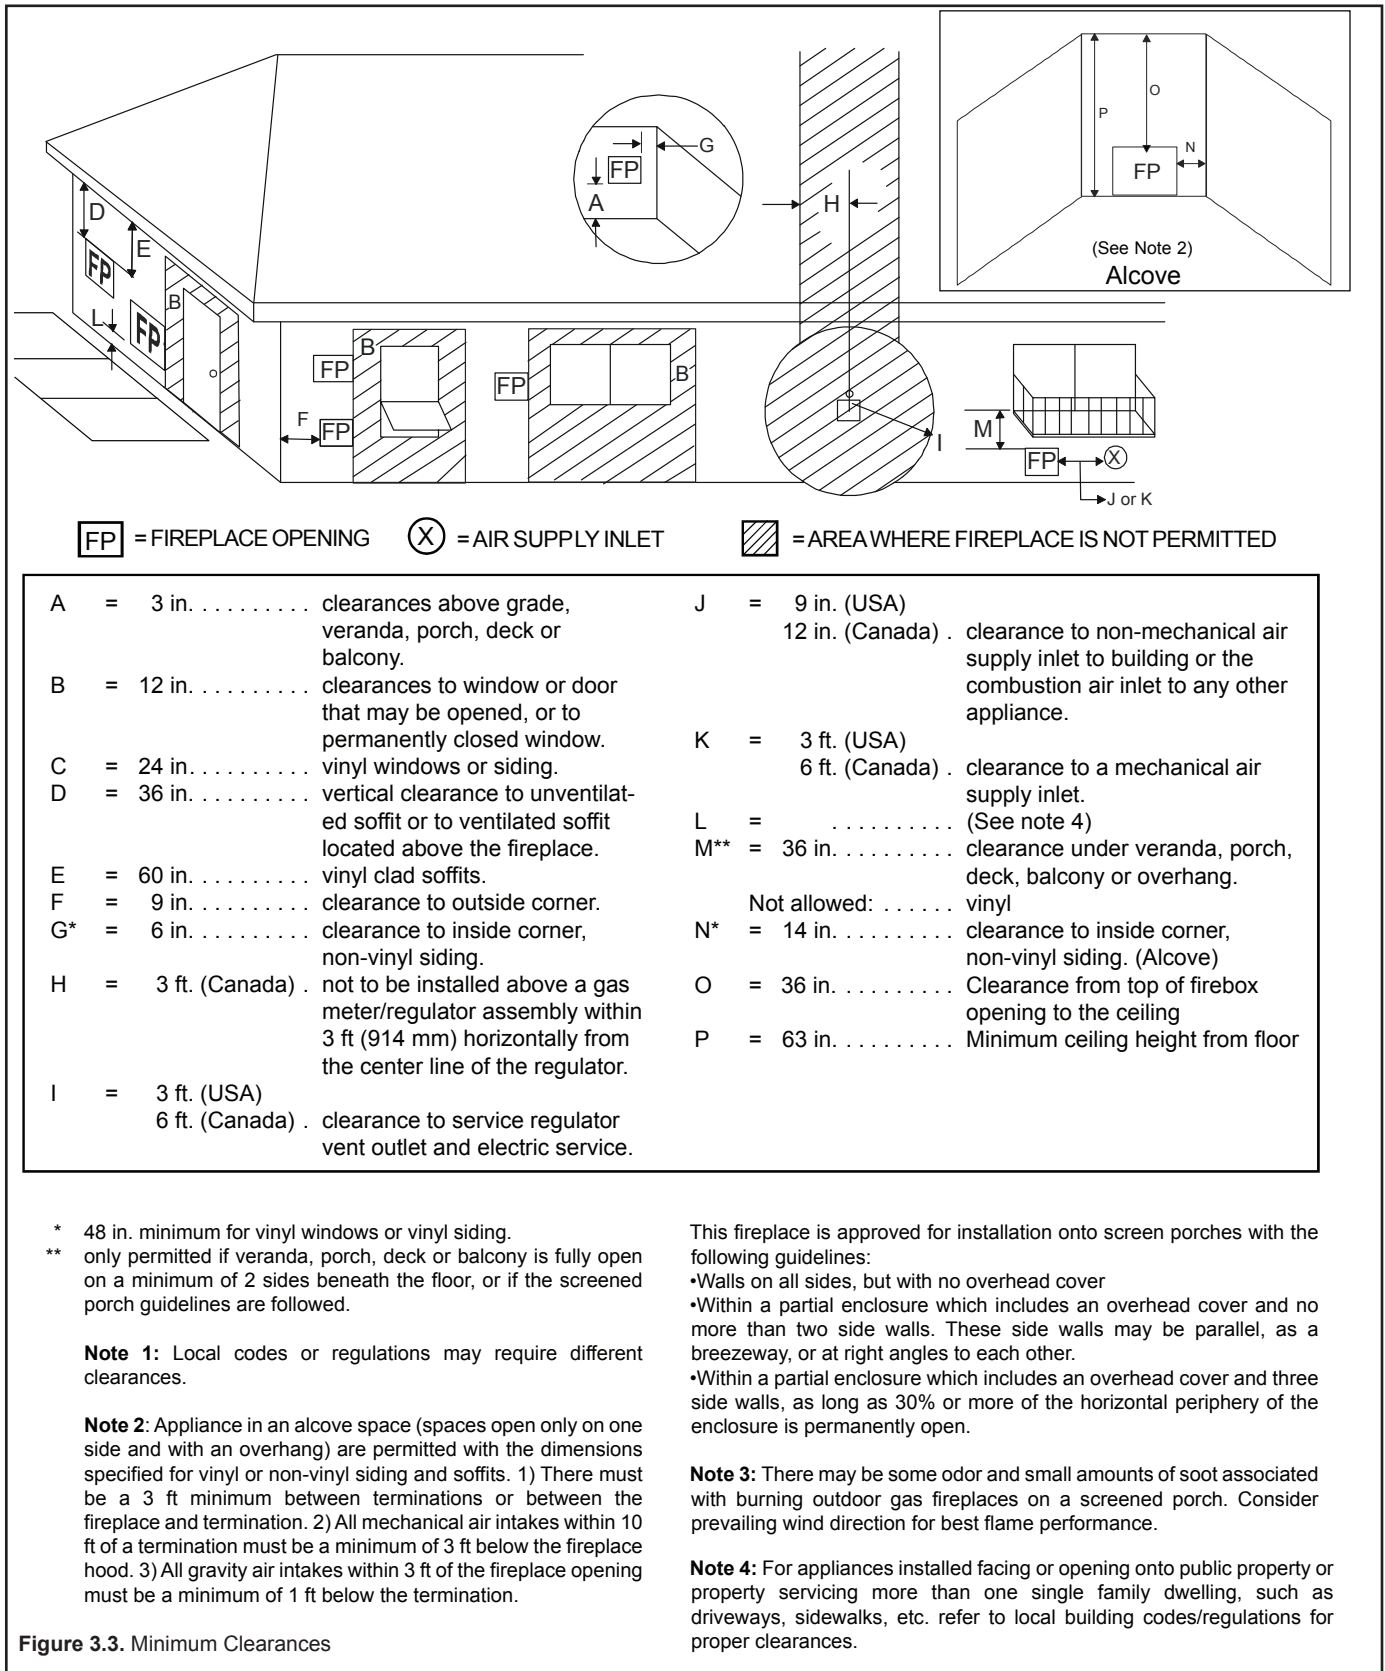

Figure 3.3. Minimum Clearances

## • Built-in Installation

When this appliance is installed into a wall, we recommend that the wall be an exterior wall system.

- See framing measurements in Figure 3.2 and 3.4.
- You must maintain 1 ½ in. air space at the back and sides. See Figure 3.2
- The header must not be placed below the top of the top standoffs.
- Noncombustible wall sheathing material is required 8" above the appliance. (See Figure 3.4)
- An 8" tall cement board has been provided for this installation.

Flash the perimeter of the appliance, corners and the appliance face in a manner consistent with regional practices as required to prevent water penetration around the appliance. See Section 3B and Figure 3.3 and 3.4 for more information regarding wall and enclosure construction.

**WARNING! Risk of Fire!** Comply with all minimum clearances to combustibles as specified. Framing or finishing material closer than the minimums listed must be constructed entirely of non-combustible materials (i.e., steel studs, concrete board, etc).

## D. Hearth Extension/Floor Protection

This application does not require a hearth extension.

## E. Stand-Alone Installation

This appliance may be installed as a stand-alone unit.

- Construct a stand-alone framing of combustible or noncombustible materials.
- Cement board or other noncombustible material can be applied directly to the face of the appliance.
- Tape and seal all joints and corners.
- Provide proper flashing and moisture management if installed on surfaces that may rot or otherwise be damaged by water. (See also Section 4.B.)

## **F. Moisture Resistance**

This outdoor appliance will shed moderate amounts of water, but is not waterproof. This appliance must be enclosed or covered with noncombustible finish material and all joints sealed to prevent water infiltration.

The firebox will not perform as an exterior wall. Moisture penetration must be considered for construction that places the appliance in structure walls or on moisture sensitive surfaces.

**When installed on exterior walls:** Hearth & Home Technologies recommends that the chase be constructed outside the structure's weather envelope. Where the platform meets the wall, use a flashing detail similar to that required for attached decks. Chase platforms, including hearths should slope away from the structure at 1/8 in. to 1/4 in. per foot. The appliance can be shimmed level.

**Water Drainage:** The Lanai is designed to operate outdoors experiencing rain and other sources of moisture that will enter the firebox. The unit has eight built-in 1 7/8" drain holes in the base which will allow moisture to pass through the bottom of the enclosure. When constructing the enclosure, the builder must provide a means of draining water from under the unit and out of the structure. This can be achieved by properly positioned drain holes, slots or other means to allow water to exit at the lowest grade of the structure. Choosing the location of the unit is also important so that an area that may experience excessive water flow or standing water is avoided. In some cases a drain pan is needed to ensure proper drainage. This can be constructed from a corrosion resistant metal, or suitable material for outdoor use with a water resistant membrane. A slope of 1/4" per foot toward the drain ports of the structure is recommended. In instances where a drain pan is used, the framing height of the unit must be adjusted from 3" to 6" from the base of the unit to the bottom of the enclosure to allow for proper installation of the drain pan. A drain pan can also be purchased (ODLANAIG-51DP).

## 4 Appliance Preparation

### A. Securing and Leveling Appliance

**CAUTION! Risk of cuts, abrasions or flying debris. Wear protective gloves and safety glasses during installation. Sheet metal edges are sharp.**

Position, level and secure the appliance.

- Place the appliance into position on either a wood or noncombustible continuous flat surface.
- Level the appliance from side to side and front to back.
- Shim the appliance with noncombustible material, such as sheet metal, as necessary.
- Chase platforms, including hearths, should slope away from the structure at 1/8 inch to 1/4 inch per foot.
- Nailing tabs must be moved from shipping position to installation position and secured to framing. Bend the two nailing tabs out on each side. See Figure 4.1.

### B. Flashing

- Flash the appliance in a manner consistent with regional practices to prevent water penetration around the appliance. Due to elevated temperatures across the top of the appliance, metal flashing and high temperature sealant must be used. Adhesive polymers flashing materials may melt.
- For brick, stone, stucco and similar construction, weep screeds should be installed per regional codes.
- See Section 3.F. and Figures 3.2. for more information regarding wall and enclosure construction required to prevent moisture penetration into the structure. The appliance will shed moderate amounts of water but is not waterproof.

Figure 4.1. Positioning and Securing Nailing Tab

# 5 Electrical Information

## A. Wiring Requirements

**Note:** The Lanai appliance **MUST** be connected to a GFCI (Ground Fault Circuit Interrupter) protected circuit breaker.

**WARNING! Risk of Shock or Explosion! DO NOT** wire 110-120 Vac. to the valve or to the appliance wall switch. Incorrect wiring will damage controls.

**NOTICE:** This appliance must be electrically wired and grounded in accordance with local codes, or in the absence of local code, with **National Electric Code ANSI/NFPA 70-latest edition or the Canadian Electric Code CSA C22.1.**

**Total Electrical Requirements: 110-120Vac., 60Hz., less than 12 Amperes.**

- Wire the appliance junction box to unswitched 110-120Vac. This is required for proper operation of the appliance.
- A 110-120Vac. circuit for this appliance must be protected with ground-fault circuit-interrupter protection in compliance with the applicable electrical codes.
- Low voltage and 110-120 VAC voltage cannot be shared within the same wall box.

## Electrical Service and Repair

**WARNING! Risk of Shock! Label all wires prior to disconnection when servicing controls. Wiring errors could cause improper and dangerous operation. Verify proper operation after servicing.**

## B. IntelliFire Pilot Ignition System Wiring

- Wire the appliance junction box to 110-120Vac. for proper operation of the appliance.

**WARNING! Risk of Shock or Explosion! DO NOT** wire IPI controlled appliance junction box to a switched circuit. Incorrect wiring will override IPI safety lockout.

**THIS APPLIANCE IS SUPPLIED STANDARD WITH:**

- IntelliFire control valve (3V)
- Wall switch Control – Operates unit On/Off and LED lights.

- Two (2) LED outdoor rated light strips (12V)
- Conductor wall switch wire

## C. Installing the Electrical

The Lanai is supplied with the junction box located on the right side of the appliance. If the electrical must be run from the left, a cover plate has been provided to relocate the junction box to the opposite side.

### Wiring Junction Box

- Remove (4) screws securing junction box access panel and gasket to appliance, pull junction box away from unit. See Figure 5.1.

Figure 5.1. Access Panel Removal

- Unplug transformer and power supply.
- Disassemble junction box. See Figure 5.2

Figure 5.2. Junction Box

- Wire junction box and reassemble. See Figure 5.3.

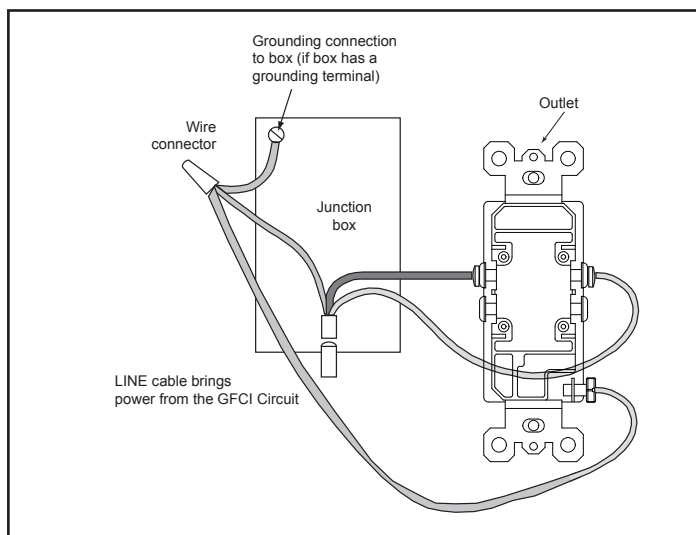

Figure 5.3. Wire Junction Box

- Plug in transformer and power supply, install junction box and gasket on right or left side of the appliance.

Note: If the junction box is relocated to the left side of the appliance, the cover plate and gasket removed from the left side must be reinstalled on the right side.

# Wiring Diagram

Figure 5.5. Wiring diagram

## D. Wall Switch Control Assembly

The Lanai series outdoor gas appliance is supplied with a wired wall switch control panel, a control mounting box with cover. See Figure 5.5.

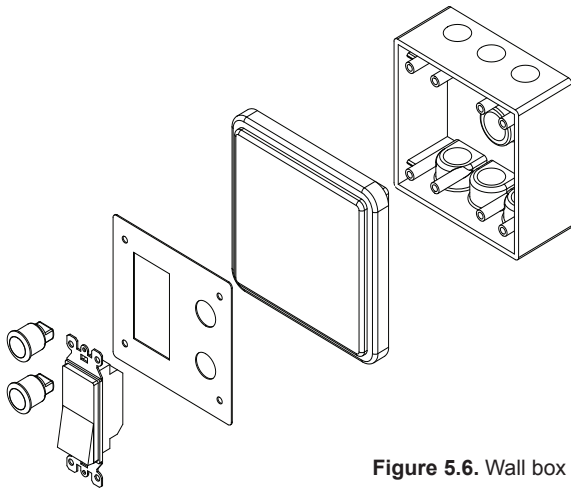

Figure 5.6. Wall box cover.

- The wall switch control assembly is shipped prewired.

- ▶ **NOTE:** Supplied wire allows for the control assembly to be mounted up to 14 feet from the appliance. The supplied grommet can be installed on the left or right side of the appliance for wall switch control wire routing.
- The control box can be rerouted on the right or left side of the unit.
- Locate controls by lifting engine and using support legs. Remove three (3) screws at the bottom of cover showing access to intellifire control module and valve.
- The rocker switch wire (Black/white) must be plugged into the two brown wires on the control wiring harness. There is no incorrect connection for these two wires. Shown in wiring diagram (Figure 5.4.)
- The yellow cable for the two LED buttons plugs into the LED module (Blue control module) located on the left side of the engine base. Make sure the cable is completely engaged and clip is over top of the plug.
- Using the tabs, mount the 4 x 4 gang box to a stud within 14' of the appliance.

Figure 5.7. Wall switch mounting

# 6 Gas Information

## A. Valve Access

The valve and controls are located in the appliance control box. See Figure 6.1.

The control box and controls can be accessed by lifting engine assembly and shown in Figure 6.1

- Make sure unit is off and cool.
- Remove media and deflection glass panel from hearth pan.
- Remove two (2) screws securing burner assembly to appliance, located on the front left and right of the burner assembly directly behind the deflection glass retainers.
- Lift the burner assembly and place the two engine supports, provided under the Engine, against lower front space at the bottom of the face, and slide into the slots at the bottom of the engine assembly. See Figure 6.1.

Figure 6.1. Appliance with engine lifted

- Remove screws securing control cover panel revealing valve and control board.
- Remove screws securing hearth pan to firebox bottom.
- Lift engine to reveal control box cover.
- Remove screws securing control box cover.

## B. Gas Pressure

Gas Pressure	Natural Gas	Propane
Minimum inlet pressure	5.0 in. w.c.	11 in. w.c.
Maximum inlet pressure	10.5 in. w.c.	13 in. w.c.
Manifold pressure	3.5 in. w.c.	10 in. w.c.

## WARNING

Fire Risk.  
Explosion Hazard.

High pressure will damage valve. Low pressure could cause an explosion. Disconnect gas supply piping BEFORE pressure testing gas line at test pressures above 1/2 psig.

Close the manual shut-off valve BEFORE pressure testing gas line at test pressures equal to or less than 1/2 psig.

- Verify inlet pressures. Verify minimum pressures when other household gas appliances are operating
- Install regulator upstream of valve if line pressure is greater than 1/2 psig.

- Optimum appliance performance requires proper input pressures.
- Gas line sizing requirements will be determined in ANSI Z233.1 National Fuel Gas Code in the USA and CAN/CGA B149 in Canada.
- Pressure requirements are:

These pressures can be verified by lifting engine and removing control cover to reveal the valve.

When an appliance is connected to a fixed piping system, the installation must conform with local codes, or in the absence of local codes with the **National Fuel Gas Code, ANSI Z223.1/NFPA 54 or International Fuel Gas Code.**

**Note:** Have the gas supply line installed in accordance with local codes, if any. If not, follow ANSI 223.1 Installation should be done by a qualified installer approved and/or licensed as required by the locality. (In the commonwealth of Massachusetts, installation must be performed by a licensed plumber or gas fitter.)

**Note:** An individual manual shut-off valve (not supplied) is required when installing this appliance. The manual shut-off valve must be located in an easily accessible area, no more than six feet from the appliance.

**Note:** A listed (and commonwealth of Massachusetts approved) 1/2 inch (13mm) T-handle manual shut-off valve and flexible gas connector are connected to the 1/2 inch (13mm) control valve inlet.

- **If substituting for these components, please consult local codes for compliance.**

### C. Gas Connection

- Refer to Section 3 for location of gas line access in appliance.
- The gap between supply piping and gas access hole may be caulked with a minimum of 300°F continuous exposure rating or stuffed with noncombustible, unfaced insulation to help prevent rodents and insects from getting into the control area of the appliance.
- Ensure that gas line does not come in contact with outer wrap of the appliance. Follow local codes.
- Pipe incoming gas line into lower compartment.
- Connect incoming gas line to the 1/2 inch (13mm) connection on the manual shut-off valve.

**WARNING! Risk of Fire or Explosion!** Support control when attaching pipe to prevent bending gas line.

- A small amount of air will be in the gas supply lines.

Light the appliance. It will take a short time for air to purge from lines. When purging is complete, the appliance will light and operate normally.

**WARNING! Risk of Fire, Explosion or Asphyxiation!** Check all fittings and connections with a non-corrosive commercially available leak-check solution. **DO NOT** use open flame. Fittings and connections could have loosened during shipping and handling.

**WARNING! Risk of Fire or Explosion!** Gas build-up during line purge could ignite.

- Purge should be performed by a qualified service technician.
- Ensure adequate ventilation.
- Ensure there are no ignition sources such as sparks or open flames.

### D. Fuel Conversion

- Make sure the appliance is compatible with available gas types.
- The Lanai series gas appliance is supplied from the factory for use with natural gas. If a Propane(LP) conversion is required, kit LPK-ODLANAIG51 must be purchased in order to convert the unit for use with propane.
- Conversions must be made by a qualified service technician using Hearth & Home Technologies specified and approved parts.

### E. High Altitude Installations

**Notice:** *If the heating value of the gas has been reduced, these rules do not apply. Check with your local gas utility or authorities having jurisdiction.*

When installing above 2000 feet elevation:

- In the USA: Reduce input rate 4% for each 1000 feet above 2000 feet.
- In Canada: Input ratings are certified without a reduction of input rate for elevations up to 4500 feet (1370m) above sea level. Please consult provincial and/or local authorities having jurisdiction for installations at elevations above 4500 feet (1370m.)

Check with your local gas utility to determine proper orifice size. See conversion kit (LPK-ODLANAIG51) for instructions on how to change main burner orifice.

# 7 Finishing

## A. Facing Material

The fireplace structure can be covered with any noncombustible material. Refer to Section 1.D.

**WARNING! Risk of Fire! DO NOT** apply combustible materials beyond the minimum clearances. Comply with all minimum clearances to combustibles as specified in this manual. Overlapping materials could ignite. Any installation outside the scope as stated in this manual please contact you authorized HHT dealer prior to installation.

## Mantel and Wall Projections

**WARNING! Risk of Fire!** Comply with all minimum clearances to combustible as specified. Framing or finishing material closer than the minimums listed must be constructed entirely of noncombustible materials (i.e. steel studs, concrete board, etc.) Figure 7.1 and 7.2 show the dimensions for mantels or other combustible projections above the appliance opening.

Figure 7.1. Minimum vertical and maximum horizontal mantel dimensions for combustible materials.

## Good Faith Guidelines for TV Installation's above a Typical Gas Fireplace

### Notes:

1. TV installation as shown requires the mantel be constructed entirely of non-combustible material as it is below the allowable height for a combustible mantel.
2. These are good faith recommended clearances only and not a guarantee of compliance with all TV manufacturers' maximum allowable operating temperatures.
3. Since every home has unique air flow characteristics and maximum allowable operating temperatures can vary from manufacturer to manufacturer and from model to model, actual TV temperatures should be validated at the time of each installation. TVs should not be used in situations where the actual TV temperature exceeds the manufacturers' maximum allowable operating temperatures identified in the TV's technical specifications. Contact the TV's manufacturer directly if you cannot locate this information or have questions regarding the information.
4. Mantel height and depth must conform to mantel requirements specified in the fireplace installation manual.

Figure 7.2. Good faith TV guidelines

## 8 Appliance setup

### A. Remove the Shipping Materials

Remove the plastic coating and shipping materials from the firebox.

**WARNING! Risk of Fire!** Close the ball valve before installing the media template to prevent accidental lighting. Remove the media template before lighting the appliance.

### B. Clean the Appliance

Clean/vacuum any sawdust that may have accumulated inside the firebox.

### C. Optional Accessories

Install approved accessories per instructions included with accessories. Contact your dealer for a list of approved accessories.

**WARNING! Risk of Fire and Electric Shock!** Use ONLY Hearth & Home Technologies-approved optional accessories with this appliance. Using non-listed accessories could result in a safety hazard and will void the warranty.

### D. Verify Pilot Shield

Ensure proper placement of the pilot shield and media placement template. See Figure 8.1. Shipping could cause them to become displaced.

### E. Install Deflection Glass

Remove deflection glass packaging. Carefully place deflection glass into support bracket provided. See Figure 8.1.

### F. Install Clear Crystal Media

Pour crystal media into the hearth area. Cover the entire hearth pan area evenly, including burner area.

### G. Remove Media Placement Template

Remove screws attaching the media placement template and remove. Do not discard template. This must be used at any time media is applied to unit.

Figure 8.1. Media placement template

#### **Optional Screen – ODLANAIG-51SCN**

- The Lanai series outdoor gas appliance offers a protection screen that is designed to protect the inside of the appliance from trash and other debris (sticks, leaves, etc.) while not in use. This appliance may be operated with the screen installed.

#### **Optional Trim Kit – ODLANAIG-51CFT**

- The Lanai series outdoor gas appliance offers a trim kit that will allow the owner the option to cover the face of the appliance down to the firebox opening. This four (4) piece kit comes with an integrated eyebrow and 3/4" stainless steel lip that frames in the opening for a clean and seamless install.

#### **Optional Drain Pan – ODLANAIG-51DP**

- The lanai series outdoor gas appliance offers a drain pan that is designed to channel moisture to the front or rear of the enclosure housing the unit. This option will help ensure moisture does not become trapped inside the structure and helps to keep the area under the appliance free of standing water.
