

CRYSTAL FIRE

CF-20 Log Set Installation Guide

Thank you for purchasing a gas log set for your CFP20, CFP2424 and BI-16 Crystal Fire burner. These instructions will assist you in setup and placement of your new log set (CFP20 pictured). While your gas logs can be arranged in several configurations, we've provided these instructions as a general guide for log placement.

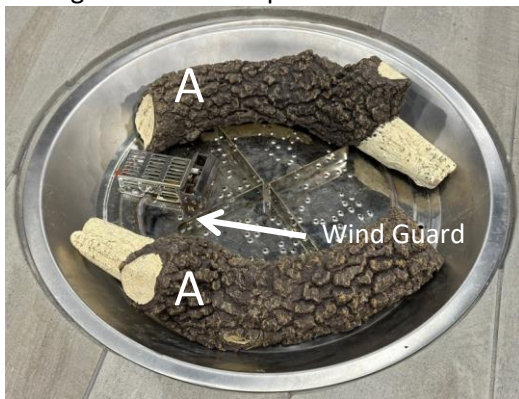

Included in this kit:

- 1 Bag of black lava rock
- 6 Refractory cement gas logs

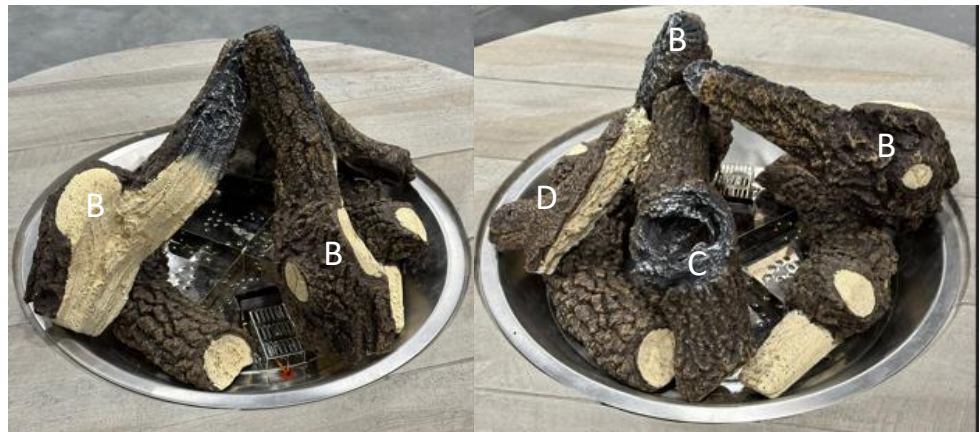

Step 1:

Remove logs from packaging and lay semi-circular logs "A" in base of burner and not covering the wind guard or burner ports.

Step 2:

Lean log "B" against log "C" as shown, adding logs "D" and the second log "B" perpendicularly. Adjust placement to your liking and make sure the arrangement is stable.

Step 3:

Remove lava rock from packaging and evenly scatter in the center of the burn area and around the logs. Glass media can be spread around the perimeter areas but not in the burn area. Take care not to get lava rock inside the wind guard.

Note

Improperly ventilated log configurations may cause soot to appear on log surfaces. Rearranging logs to allow proper airflow should decrease sooting.
