1. Summary

Outdoor Unit:

MULTI18HP230V1EO

MULTI30HP230V1EO MULTI36HP230V1EO MULTI42HP230V1EO

Model list:

No.	Model	Product code
1	MULTI18HP230V1EO	CB228W16800
2	MULTI24HP230V1EO	CB228W16900
3	MULTI30HP230V1EO	CB228W16700
4	MULTI36HP230V1EO	CB228W17900
5	MULTI42HP230V1EO	CB228W17800

MULTI24HP230V1EO

2. Specifications

Model			MULTI18HP230V1EO
Product 0	Code		CB228W16800
Davier	Rated Voltage	V~	208/230
Power	Rated Frequency	Hz	60
supply	Phases		1
Cooling of	capacity	Btu/h	17000
Heating of		Btu/h	18000
_	Power Input	W	1420
	Power Input	W	1380
	Current Input	Α	6.28
	Current Input	Α	6.12
	ower Input	W	2300/2100
Rated Cu		Α	10.0/9.0
EER		(Btu/h)/W	12.00
COP		(Btu/h)/W	13.03
		(Dta/11)/VV	21.00(SEER)
SEER			21.00(SEER2)
HSPF			10.00(HSPF) 10.00(HSPF2)
	Compressor Trademark		ZHUHAI LANDA COMPRESSOR CO., LTD.
	Compressor Model		QXF-A139zH170A
	Compressor Refrigerant Oil Type		FW68DA or equivalent
	Compressor Type		Inverter Rotary
	L.R.A	Α	25
	Compressor Rated Load Amp (RLA)	A	9.95
	Compressor Power Input	W	1295
	Compressor Thermal Protector	VV	KSD115°C HPC115/95U1
	·		Electron expansion valve
	Throttling Method	°F	-22~118
	Cooling Operation Ambient Temperature Range Heating Operation Ambient Temperature Range	°F	
		Г	-22~75.2
	Condenser Material		Aluminum Fin-copper Tube
	Condenser Pipe Diameter	mm	Ф7.94
	Rows-Fin Gap(mm)	mm	2-1.4
	Coil length (I) X height (H) X coil width (L)	mm	834×528×38.1
	Fan Motor Speed (rpm)	rpm	cooling:900 heating:900
Outdoor	Output of Fan Motor	W	30
Unit	Fan Motor RLA	Α	1
	Fan Motor Capacitor	μF	1
	Air Flow Volume of Outdoor Unit	CFM	1354
	Fan Type-Piece		Axial-flow Axial-flow
	Fan Diameter	mm	Ф420-131.1
	Defrosting Method		Automatic Defrosting
	Climate Type		T1
	Isolation		I
	Moisture Protection		IPX4
	Permissible Excessive Operating Pressure for the Discharge Side	PSIG	550
	Permissible Excessive Operating Pressure for the Suction Side	PSIG	240
	Dimension (WXDXH)	inch	32 23/64X13 55/64X21 21/32
	Dimension of Package (LXWXH)	inch	34 7/32X15 35/64X23 25/64
	Dimension of Package(LXWXH)	inch	34 21/64X15 43/64X24 13/32
	Net Weight	lb	77.2
	Gross Weight	lb	82.7
	efrigerant Charge		R410A

● ● ● ● ● <u>Technical Information</u>

	Cross-sectional Area of Power Cable Conductor	sq in	0.0032 (AWG14)
	Recommended Power Cable(Core)	N	3
	Connection Pipe Connection Method	-	Flare Connection
	Not Additional Gas Connection Pipe Length	ft	32.8
	Connection Pipe Gas Additional Charge	oz/ft.	0.2
	Outer Diameter of Liquid Pipe1(GREE Allocation) (Metric)	inch	1/4"
	Outer Diameter of Liquid Pipe2(GREE Allocation) (Metric)	inch	1/4"
Outdoor	Outer Diameter of Gas Pipe1(GREE Allocation) (Metric)	inch	3/8"
Unit	Outer Diameter of Gas Pipe2(GREE Allocation) (Metric)	inch	3/8"
	Connection Pipe Max. Height Distance(indoor and indoor)	ft	49.2
	Connection Pipe Max. Height Distance(indoor and outdoor and indoor up)	ft	49.2
	Connection Pipe Max. Height Distance(indoor and outdoor up)	ft	49.2
	Max. equivalent connection pipe length(outdoor to last indoor)	ft	65.6
	Connection Pipe Max. Length Distance(total lenght)	ft	131.2

● ● ● ● ● <u>Technical Information</u>

6. Function and Control

1 Basic functions of the system

1.1 Cooling Mode

1.1.1 Cooling conditions and process:

If the compressor is in stop status and start the unit for cooling operation, when one of the indoor units reaches the cooling operation condition, the unit start cooling operation; in this case, the electronic expansion valve, the outdoor fan and the compressor start operation.

1.1.2 Stop in cooling operation

1.1.2.1 Compressor stops

The compressor stops immediately, the outdoor fan stops after 1min.

1.1.2.2 Some of the indoor units reach the stop condition (the compressor does not stop) The compressor operates immediately according to the required frequency. For the indoor unit with no requirement, the corresponding electronic expansion valve is closed to OP.

1.1.3 Cooling mode transfers to heating mode

When the unit transfers to heating mode, the 4-way valve is energized after the compressor stops for 2min. The other disposals are the same as stopping in cooling mode.

1.1.4 4-way valve: in this mode, the 4-way valve is closed.

1.1.5 Outdoor fan control in cooling mode

The outdoor fan starts before 5s of the starting of compressor. The outdoor fan will run in high speed for 3min after starting and then it will run in set speed. The fan shall run at every speed for at least 80s. (When the quantity of running indoor unit is changed, the unit will enter the control described in 1.3.5.1 and 1.3.5.2);

When the compressor stops, the outdoor fan runs at present speed and stops after 1min.

1.2 Dry Mode

1.2.1 The dry conditions and process are the same as those in cooling mode;

1.2.2 The status of 4-way valve: closed;

1.2.3 The temperature setting range: $16 \sim 30^{\circ}$ C;

1.2.4 Protection function: the same as those in cooling mode;

1.2.5 In dry mode, the maximum value A of the capacity requirement percentage of single unit is 90% of that in cooling mode.

The open condition of the electronic expansion valve, outdoor fan and compressor is the same as those in cooling mode.

1.3 Heating Mode(Only for heat pump models)

1.3.1 Heating conditions and process:

When one of the indoor units reaches the heating operation condition, the unit starts heating operation.

1.3.2 Stop in heating operation:

1.3.2.1 When all the indoor units reach the stop condition, the compressor stops and the outdoor fan stops after 1min;

1.3.2.2 Some of the indoor units reach the stop condition

The compressor reduces the frequency immediately and operates according to the required frequency;

1.3.2.3 Heating mode transfers to cooling mode(dry mode), fan mode

a. The compressor stops; b. the power of 4-way valve is cut off

after 2min; c. the outdoor fan stops after 1min; d. the status of 4-way valve: energized;

1.3.3 Outdoor fan control in heating mode

The outdoor fan starts before 5s of the starting of compressor and then it will run in high speed for 40s;

The fan shall run at every speed for at least 80s;

When the compressor stops, the outdoor fan stops after 1min.

1.3.4 Defrosting function

When the defrosting condition is met, the compressor stops; the electronic expansion valve of all indoor units open in big angle; the outdoor fan stops after 40s of the stop of compressor, meanwhile, the 4-way valve reverses the direction; after the 4-way valve reverses the direction, the compressor starts; then begin to calculate the time of defrosting, the frequency of the compressor rises to reach the defrosting frequency.

1.3.5 Oil-returned control in heating mode

1.3.5.1 Oil-returned condition

The whole unit is operating in low frequency for a long time.

1.3.5.2 Oil-returned process in heating mode

The indoor unit displays "H1"

1.3.5.3 Oil-returned finished condition in heating mode.

The duration reaches 5min

1.4 Fan Mode

The compressor, the outdoor fan and the 4-way valve are closed; temperature setting range is $16\sim30^{\circ}$ C.

2. Protection Function

2.1 Mode Conflict Protection of indoor unit

When the setting mode is different of different indoor unit, the unit runs in below status:

a. The mode of the first operating indoor unit is the basic mode, then compare the mode of the other indoor units to see if there is a conflict. Cooling mode (dry mode) is in conflict with heating mode.

b. Fan mode is in conflict with heating mode and the heating mode is the basic mode. No matter which indoor unit operates first, the unit will run in heating mode.

2.2 Overload protection function

When the tube temperature is a little low, the compressor raises the operation frequency; when the tube temperature is a little high, the compressor frequency is restricted or lows down the operation frequency; when the tube temperature is too high, the compressor protection stops running.

If the discharge temperature protection continuously appears for 6 times, the compressor can't resume running. The compressor can resume running after cutting off the power and then putting through the power. (if the running time of the compressor is longer than 7min, the protection times record will be cleared)

2.3 Discharge Protection Function

When the discharge temperature is a little low, the compressor raises the operation frequency; when the discharge temperature is a little high, the compressor frequency is restricted or lows down the operation frequency; when the discharge temperature is too high, the compressor protection stops running.

If the discharge temperature protection continuously appears for 6 times, the compressor can't resume running. The compressor can resume running after cutting off the power and then putting through the power. (if the running time of the compressor is longer than 7min, the protection times record will be cleared)

2.4 Communication malfunction

Detection of the quantity of installed indoor units:

After 3min of energizing, if the outdoor unit does not receive the communication data of certain indoor unit, the outdoor unit will judge that indoor unit is not installed and will treat it as it is not installed. If the outdoor unit receives the communication data of that indoor unit later, the outdoor unit will treat that unit as it is installed.

2.5 Overcurrent Protection

a. Overcurrent protection of complete unit; b. phase wire current protection; c. compressor phase current protection

2.6 Compressor high-pressure protection

2.6.1 When the high-pressure switch is detected cut off for 3s continuously, the compressor will enter high-pressure protection as it stops when reaching set temperature. Meanwhile, the outdoor unit will send the signal of "high-pressure protection" to the indoor units:

2.6.2 After the appearance of high-pressure protection, when the high-pressure switch is detected closed for 6s continuously, the compressor can resume running only after cutting off the power and then putting through the power.

2.7 Compressor overload protection

If the compressor overload switch is detected having movement, the indoor unit will display the corresponding malfunction as it stops when the indoor temperature reaching set temperature. When the compressor stops for more than 3min and the compressor overload switch is reset, the unit will resume operation status automatically. If the protection appears for more than 6 times (if the running time of the compressor is longer than 30min, the protection times record will be cleared), the unit can not resume operation status automatically, but can resume

running only after cutting off the power and then putting through the power.

2.8 Compressor Phase-lacking Protection

When the compressor starts, if one of the three phases is detected open, the compressor will enter phase-lacking protection.

The malfunction will be cleared after 1min, the unit will restart and then detect if there is still has phase-lacking protection. If the phase-lacking protection is detected for 6 times continuously, the compressor will not restart but can resume running only after cutting off the power and then putting through the power. If the running time of the compressor is longer than 7min, the protection times record will be cleared.

2.9 IPM Protection

2.9.1 When the IPM module protection is detected, the unit will stop as the indoor temperature reaching set temperature, PFC is closed, display IPM protection malfunction. After the compressor stops for 3min, the unit will resume operation status automatically; if the IPM protection is detected for more than 6 times continuously (If the running time of the compressor is longer than 7min, the protection times record will be cleared), the system will stop and send the signal of module protection to indoor unit. The unit can not resume operation status automatically, but can resume running only after cutting off the power and then putting through the power.

2.9.2 IPM module overheating protection

2.9.2.1 When $T_{\text{IPM}} > 85^{\circ}\text{C}$, prohibit to raise frequency;

2.9.2.2 When $T_{\text{IPM}} \ge 90^{\circ}\text{C}$, the operation frequency of compressor lows down by 15% every 90s according to the present capacity requirement of the complete unit. It will keep 90s after lowing down the frequency. After lowing down the frequency, if $T_{\text{IPM}} \ge 90^{\circ}\text{C}$, the unit will circulate the above movement until reaching the minimum frequency; if $85^{\circ}\text{C} < T_{\text{IPM}} < 90^{\circ}\text{C}$, the unit will run at this frequency; when $T_{\text{IPM}} \le 85^{\circ}\text{C}$, the unit will run at the frequency according to the capacity requirement;

2.9.2.3 When $T_{IPM} \ge 95^{\circ}C$, the compressor stops. After the compressor stops for 3min, if $T_{IPM} < 85^{\circ}C$, the compressor and the outdoor fan will resume operation.

26 <u>Technical Information</u>

7. Notes for Installation and Maintenance

Safety Precautions: Important!

Please read the safety precautions carefully before installation and maintenance.

The following contents are very important for installation and maintenance.

Please follow the instructions below.

- •The installation or maintenance must accord with the instructions.
- Comply with all national electrical codes and local electrical codes.
- Pay attention to the warnings and cautions in this manual.
- All installation and maintenance shall be performed by distributor or qualified person.
- •All electric work must be performed by a licensed technician according to local regulations and the instructions given in this manual.
- Be caution during installation and maintenance. Prohibit incorrect operation to prevent electric shock, casualty and other accidents.

Warnings

Electrical Safety Precautions:

- 1. Cut off the power supply of air conditioner before checking and maintenance.
- 2. The air condition must apply specialized circuit and prohibit share the same circuit with other appliances.
- 3. The air conditioner should be installed in suitable location and ensure the power plug is touchable.
- 4. Make sure each wiring terminal is connected firmly during installation and maintenance.
- 5. Have the unit adequately grounded. The grounding wire can't be used for other purposes.
- 6. Must apply protective accessories such as protective boards, cable-cross loop and wire clip.
- 7. The live wire, neutral wire and grounding wire of power supply must be corresponding to the live wire, neutral wire and grounding wire of the air conditioner.
- 8. The power cord and power connection wires can't be pressed by hard objects.
- 9. If power cord or connection wire is broken, it must be replaced by a qualified person.
- 10. If the power cord or connection wire is not long enough, please get the specialized power cord or connection wire from the manufacture or distributor. Prohibit prolong the wire by yourself.
- 11. For the air conditioner without plug, an air switch must be installed in the circuit. The air switch should be all-pole parting and the contact parting distance should be more than 3m.
- 12. Make sure all wires and pipes are connected properly and

the valves are opened before energizing.

- 13. Check if there is electric leakage on the unit body. If yes, please eliminate the electric leakage.
- 14. Replace the fuse with a new one of the same specification if it is burnt down; don't replace it with a cooper wire or conducting wire.
- 15. If the unit is to be installed in a humid place, the circuit breaker must be installed.

Installation Safety Precautions:

- 1. Select the installation location according to the requirement of this manual.(See the requirements in installation part)
- 2. Handle unit transportation with care; the unit should not be carried by only one person if it is more than 20kg.
- 3. When installing the indoor unit and outdoor unit, a sufficient fixing bolt must be installed; make sure the installation support is firm.
- 4. Ware safety belt if the height of working is above 2m.
- 5. Use equipped components or appointed components during installation.
- 6. Make sure no foreign objects are left in the unit after finishing installation.

Refrigerant Safety Precautions:

When refrigerant leaks or requires discharge during installation, maintenance, or disassembly, it should be handled by certified professionals or otherwise in compliance with local laws and regulations.

- 1. Avoid contact between refrigerant and fire as it generates poisonous gas; Prohibit prolong the connection pipe by welding.
- 2. Apply specified refrigerant only. Never have it mixed with any other refrigerant. Never have air remain in the refrigerant line as it may lead to rupture or other hazards.
- 3. Make sure no refrigerant gas is leaking out when installation is completed.
- 4. If there is refrigerant leakage, please take sufficient measure to minimize the density of refrigerant.
- 5. Never touch the refrigerant piping or compressor without wearing glove to avoid scald or frostbite.

Improper installation may lead to fire hazard, explosion, electric shock or injury.

Safety Precautions for Installing and Relocating the Unit:

To ensure safety, please be mindful of the following precautions.

1. When installing or relocating the unit, be sure to keep the refrigerant circuit free from air or substances other than the specified refrigerant.

Any presence of air or other foreign substance in the refrigerant circuit will cause system pressure rise or compressor rupture, resulting in injury.

2. When installing or moving this unit, do not charge the refrigerant which is not comply with that on the nameplate or unqualified refrigerant.

Otherwise, it may cause abnormal operation, wrong action, mechanical malfunction or even series safety accident.

3. When refrigerant needs to be recovered during relocating or repairing the unit, be sure that the unit is running in cooling mode. Then, fully close the valve at high pressure side (liquid valve). About 30-40 seconds later, fully close the valve at low pressure side (gas valve), immediately stop the unit and disconnect power. Please note that the time for refrigerant recovery should not exceed 1 minute.

If refrigerant recovery takes too much time, air may be sucked in and cause pressure rise or compressor rupture, resulting in injury.

4.During refrigerant recovery, make sure that liquid valve and gas valve are fully closed and power is disconnected before detaching the connection pipe.

If compressor starts running when stop valve is open and connection pipe is not yet connected, air will be sucked in and cause pressure rise or compressor rupture, resulting in injury.

5. When installing the unit, make sure that connection pipe is securely connected before the compressor starts running.

If compressor starts running when stop valve is open and connection pipe is not yet connected, air will be sucked in and cause pressure rise or compressor rupture, resulting in injury.

6.Prohibit installing the unit at the place where there may be leaked corrosive gas or flammable gas.

If there leaked gas around the unit, it may cause explosion and other accidents.

7.Do not use extension cords for electrical connections. If the electric wire is not long enough, please contact a local service center authorized and ask for a proper electric wire.

Poor connections may lead to electric shock or fire.

8.Use the specified types of wires for electrical connections between the indoor and outdoor units. Firmly clamp the wires so that their terminals receive no external stresses.

Electric wires with insufficient capacity, wrong wire connections and insecure wire terminals may cause electric shock or fire.

Main Tools for Installation and Maintenance

Screw driver

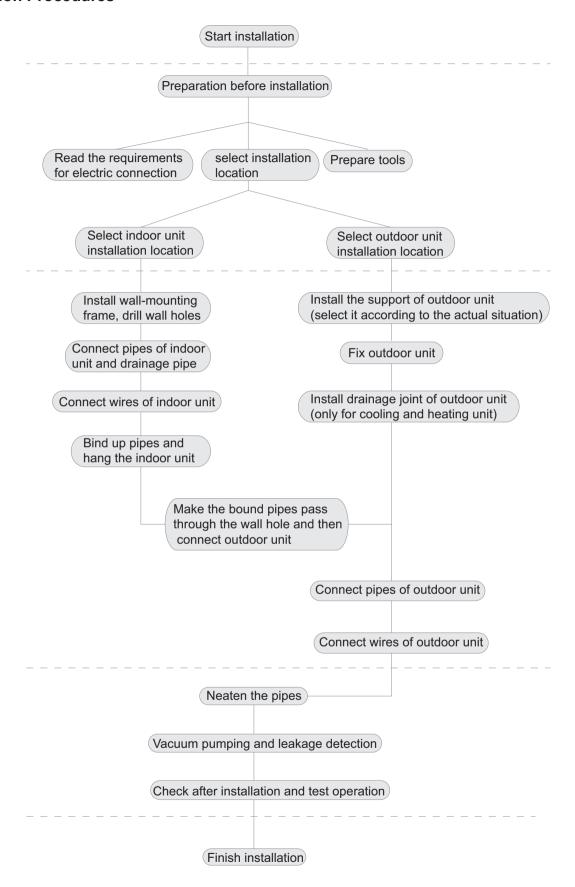

8. Installation

Installation Procedures

Note: this flow is only for reference; please find the more detailed installation steps in this section.

8.1 Electrical Connections

- 1. Remove the handle at the right side plate of the outdoor unit (one screw).
- 2. Remove the cable clamp, connect the power connection cable with the terminal at the row of connection and fix the connection. The fitting line distributing must be consistent with the indoor unit. terminal of line bank. Wiring should meet that of indoor unit.
- 3. Fix power connection wire by wire clamp.
- 4. Ensure wire has been fixed well.
- 5. Install the handle.
- ⚠ Including an air switch with suitable capacity, please note the following table. Air switch should be included magnet buckle and heating buckle function, it can protect the circuit-short and overload. (Caution: please do not use the fuse only for protect the circuit)

Air-conditioner	Air switch capacity
MULTI18HP230V1EO	20A
MULTI24HP230V1EO	25A
MULTI30HP230V1EO	35A
MULTI36HP230V1EO	45A
MULTI42HP230V1EO	45A

- ⚠ An all-pole disconnection switch having a contact separation of at least 3mm in all pole should be connected in fixed wiring.
- ⚠ Wrong wire connection may cause malfunction of some electric components. After fixing cable, ensure that leads between connection to fixed point have some space.
- ♠ For 18K:

The connection pipes and the connection wirings of the unit A, and unit B must be corresponding to each other respective.

The connection pipes and the connection wirings of the unit A, unit B and unit C must be corresponding to each other respective.

♠ For 30/36K:

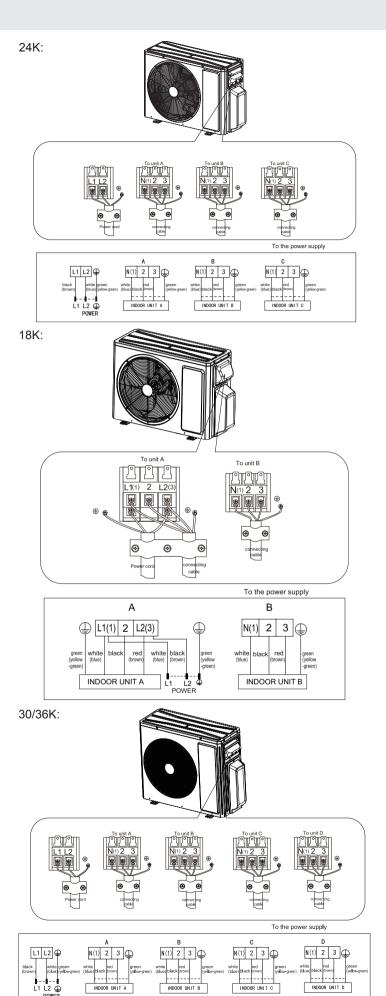

The connection pipes and the connection wirings of the unit A, unit B, unit C and unit D must be corresponding to each other respective.

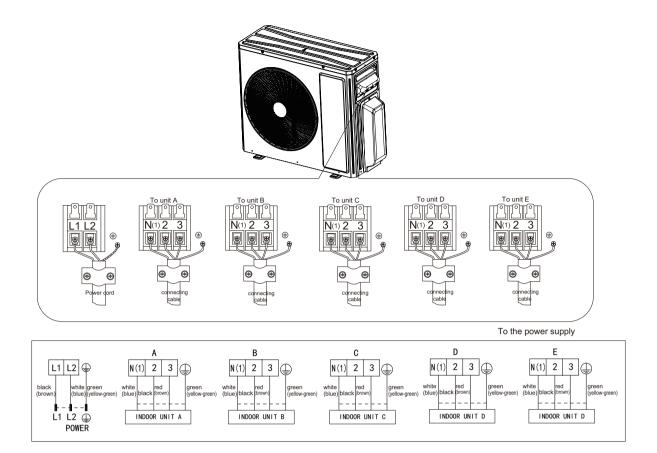

♠ For 42K:

The connection pipes and the connection wirings of the unit A, unit B, unit C, unit D and unit E must be corresponding to each other respective.

⚠ The appliance shall be installed in accordance with national wiring regulations.

Note: the above figures are only intended to be a simple diagram of the appliance and may not correspond to the appearance of the units that have been purchased.

8.2 Installing the Outdoor Unit

⚠ Use bolts to secure the unit to a flat, solid floor.

When mounting the unit on a wall or the roof, make sure the support is firmly secured so that it cannot move in the event of intense vibrations or a strong wind.

♠ Do not install the outdoor unit in pits or air vents.

Installing the pipes

▲ Use suitable connecting pipes and equipment for the refrigerant R410A.

Models(m)	18K	24K	30K	36K	42K
Max. connection pipe length	40	60	80	80	100
Max. connection pipe length(Simpleone indoor unit)	20	20	25	25	25

⚠ Wrap all the refrigerant pipes and joints.

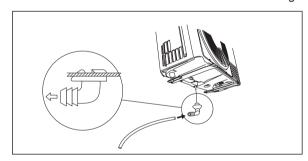

▲ Tighten the connections using two wrenches working in opposite directions.

Caution: Installation Must be Performed in Accordance with the NEC/CEC by Authorized Personnel Only.

Install the drain fitting and the drain hose (for model with heat pump only)

Condensation is produced and flows from the outdoor unit when the appliance is operating in the heating mode. In order not to disturb neighbours and to respect the environment,install a drain fitting and a drain hose to channel the condensate water.

Install the drain fitting and rubber washer on the outdoor unit chassis and connect a drain hose to itn as shown in the figure.

8.3 Bleeding

Humid air left inside the refrigerant circuit can cause compressor malfunction. After having connected the indoor and outdoor units, bleed the air and humidity from the refrigerant circuit using a vacuum pump.

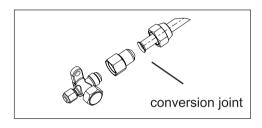

- (1) Unscrew and remove the caps from the 2-way and 3-way valves.
- (2) Unscrew and remove the cap from the service valve.
- (3) Connect the vacuum pump hose to the service valve.
- (4) Operate the vacuum pump for 10-15 minutes until an absolute vacuum of 10 mm Hg has been reached.
- (5) With the vacuum pump still in operation, close the low-pressure knob on the vacuum pump coupling. Stop the vacuum pump.
- (6) Open the 2-way valve by 1/4 turn and then close it after 10 seconds. Check all the joints for leaks using liquid soap or an

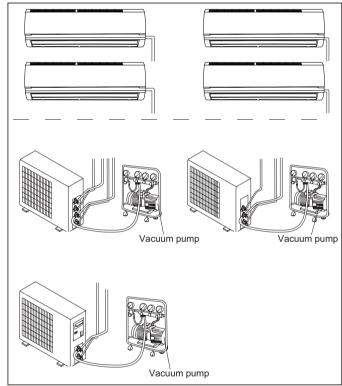

electronic leak device.

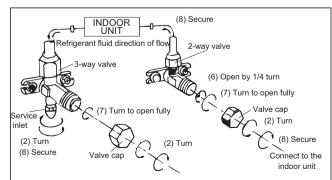

- (7) Turn the body of the 2-way and 3-way valves. Disconnect the vacuum pump hose.
- (8) Replace and tighten all the caps on the valves.

Piping size (inch)	Twisting moment (N·m)
1/4"	15-20
3/8"	35-40
5/8"	60-65
1/2"	45-50
3/4"	70-75

When the adaptor is required for the connection of indoor unit and the $24K\$ 30K outdoor unit, the method of pipe connection as follows:

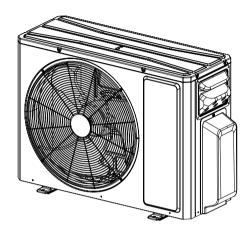

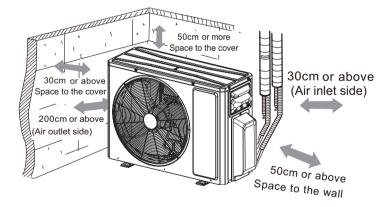

8.4 Maintenance

- ⚠ Use suitable instruments for the refrigerant R410A.
- ⚠ Do not use any other refrigerant than R410A.
- ♠ Do not use mineral oils to clean the unit.

8.5 Installation Dimension Diagram

- The installation must be done by trained and qualified service personnel with reliability according to this manual.
- Contact service center before installation to avoid the malfunction due to unprofessional installation.
- Mhen picking up and moving the units, you must be guidedby trained and qualified person.
- ▲ Ensure that the recommende dspace is left around the appliance.

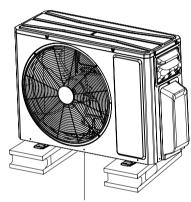

Fix the support of outdoor unit (select it according to the actual installation situation)

- 1. Select installation location according to the house structure.
- 2. Fix the support of outdoor unit on the selected location with expansion screws.

NOTICE:

- Take sufficient protective measures when installing the outdoor unit.
- Make sure the support can withstand at least four times of the unit weight.
- The outdoor unit should be installed at least 3cm above the floor in order to install drain joint. (for the model with heating tube, the installation height should be no less than 20cm.)
- •For the unit with cooling capacity of 2300W ~ 5000W, 6 expansion screws are needed; for the unit with cooling capacity of 6000W~ 8000W, 8 expansion screws are needed; for the unit with cooling capacity of 10000W~16000W, 10 expansion screws are needed.
- •As for the shape of drainage joint, please refer to the current product. Do not install the drainage joint in the severe cold area. Otherwise, it will be frosted and then cause malfunction.

at least 3cm above the floor

8.6 Check after Installation

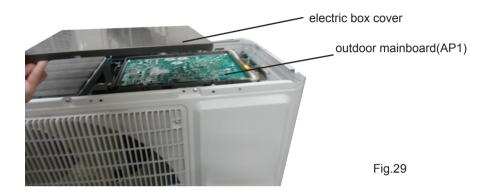

Problems Owing to Improper Installation
1 Toblems Owing to improper installation
The unit may drop, vibrate or make noises
May cause unsatisfactory cooling (heating) effect
May cause condensation and water dropping
May cause condensation and water dropping
The unit may bread down or the components may be burned out
The unit may bread down or the components may be burned out
Risk of electrical leakage
The unit may bread down or the components may be burned out
The unit may bread down or the components may be burned out
It is not easy to decide the charge amount of refrigerant.

9. Maintenance

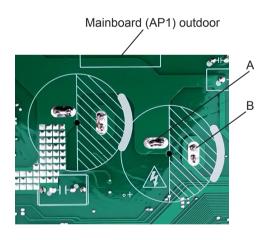

9.1 Precautions before Performing Inspection or Repair

There are high-capacity electrolytic capacitors on the outdoor mainboard. Thus, even the power is cut off, there is high voltage inside the capacitors and it needs more than 20min to reduce the voltage to safety value. Touching the electrolytic capacitor within 20min after cutting the power will cause electric shock. If maintenance is needed, follow the steps below to discharge electricity of electrolytic capacitor after power off.

(1) Open the top cover of outdoor unit and then remove the cover of electric box cover.

(2) As shown in the fig below, connect the plug of discharge resistance (about 100ohm, 20W) (if there is no discharge resistance, you can use the plug of soldering iron) to point A and B of electrolytic capacitor. There will be sparks when touching them. Press them forcibly for 30s to discharge electricity of electrolytic capacitor.

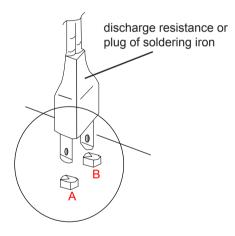

Fig.30

(3) After finish discharging electricity, measure the voltage between point A and B with universal meter to make sure if electricity discharging is completed, in order to prevent electric shock. If the voltage between the two points is below 20V, you can perform maintenance safely.

9.2 Flashing LED of Indoor/Outdoor Unit and Primary Judgement

1. Requirement of malfunction display

When several malfunctions happen at the same time, malfunction codes will be displayed circularly.

- 2. Malfunction display method
- (1) Hardware malfunction: it will be displayed immediately, please refer to "Malfunction status sheet";
- (2) Operation status: it will be displayed immediately, please refer to "Malfunction status sheet";
- (3) Other malfunction: It will be displayed after the compressor has been stopped for 200s, please refer to "Malfunction status sheet".

(Note: when the compressor starts up again, malfunction display waiting time (200s) will be cleared.)

3. Malfunction display control

Indoor unit displays malfunction code as shown in the sheet below. ODU communication light will be off for 1s and then blink for 1s circularly.

Malfunction status	sheet	
Malfunction name	Malfunction type	Nixie tube
Zero cross detection circuit malfunction	Hardware malfunction	U8
Malfunction protection of jumper cap	Hardware malfunction	C5
Feedback of without IDU motor	Hardware malfunction	H6
Indoor ambient temperature sensor is open/short circuited	Hardware malfunction	F1
Indoor evaporator temperature sensor is open/short circuited	Hardware malfunction	F2
Liquid valve temperature sensor is open/short circuited	Hardware malfunction	b5
Gas valve temperature sensor is open/short circuited	Hardware malfunction	b7
Modular temperature sensor is open/short circuited	Hardware malfunction	P7
Outdoor ambient temperature sensor is open/short circuited	Hardware malfunction	F3
Outdoor condenser middle pipe temperature sensor is	Hardware malfunction	F4
open/short circuited		
Outdoor discharge temperature sensor is open/short circuited	Hardware malfunction	F5
Communication malfunction	Hardware malfunction	E6
Malfunction of phase current detection circuit for compressor	Hardware malfunction	U1
Compressor demagnetization protection		HE
Malfunction of voltage dropping for DC bus-bar	Viewing malfunction code	U3
Module high temperature protection	through remote controller within	P8
Refrigerant lacking or blockage protection of system (not available for residential ODU)	200s; displayed directly on nixietube after 200s	F0
Charging malfunction of capacitor	Hardware malfunction	PU
High pressure protection of system	Hardware malfunction	E1
Low pressure protection of system (reserved)	Hardware malfunction	E3

Compressor overload protection	Viewing malfunction code through remote controller within 200s; displayed directly on nixietube after 200s	Н3
Indoor unit and outdoor unit do not match	Hardware malfunction	LP
Malfunction of memory chip	Hardware malfunction	EE
Wrong connection of communication wire or malfunction of electronic expansion valve	Hardware malfunction	dn
Malfunction of complete units current detection	Hardware malfunction	U5
Malfunction protection of outdoor fan 1	Hardware malfunction	L3
Detection status of wrong connection of communication wire or malfunction of electronic expansion valve	Operation status	dd
Mode conflict	Operation status	E7
Refrigerant recycling mode	Operation status	Fo
X-fan	Operation status	AL
Defrosting or oil return in heating mode	Operation status	H1
Start failure of compressor		Lc
High discharge temperature protection of compressor		E4
Overload protection		E8

IPM modular protection	nixietube after 200s	H5
DC bus-bar low voltage protection		PL
DC bus-bar high voltage protection		PH
PFC protection		HC
The four-way valve is abnormal		U7

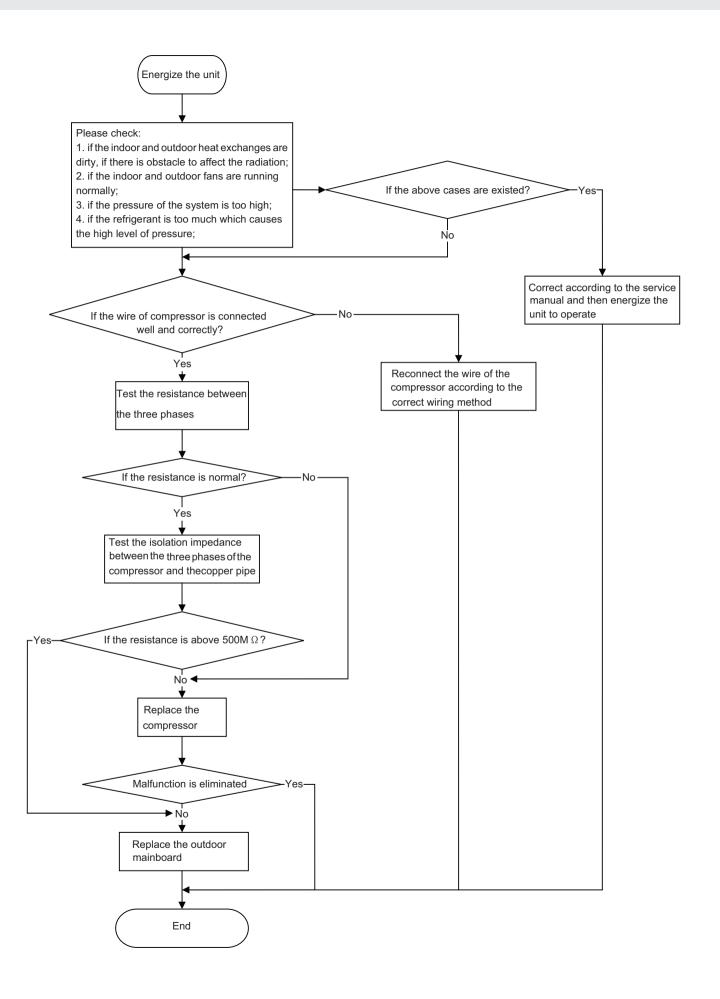

9.3 Malfunction Checking and Elimination

1 IPM protection malfunction:

Main checking point:

- If the input voltage of the unit is within normal range?
- If the connection wire of compressor is connected well? Is it loose? If the connection sequence is correct?
- If the resistance of compressor coil is normal? If the isolation of compressor coil with copper pipe is good?
- If the unit is overloaded? If the heat radiation of the unit is good?
- If the refrigerant charge is suitable?

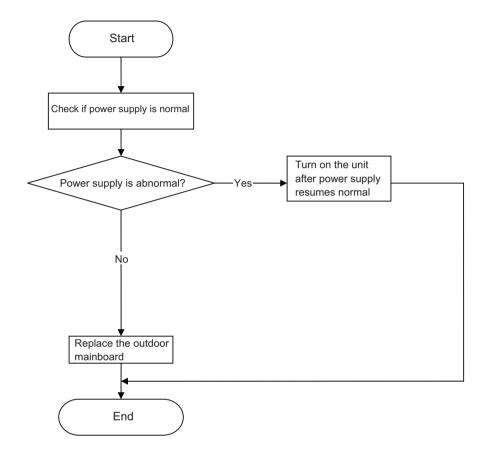

Flow chart:

- 2. PFC protection malfunction, capacity charging malfunction Main checking points:
- If the wiring of the induction is connected well and if the induction is broken;
- If the mainboard is broken;

Flow chart:

For 14/18K

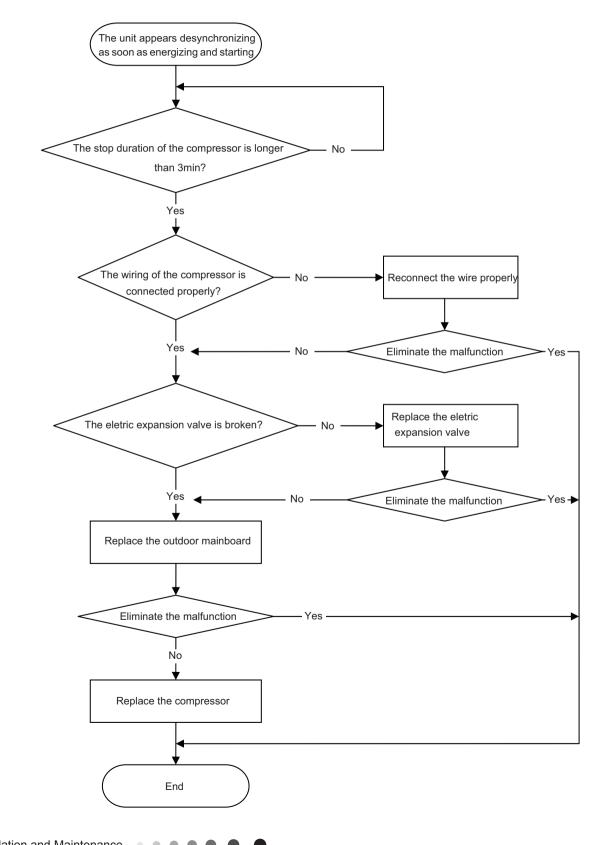

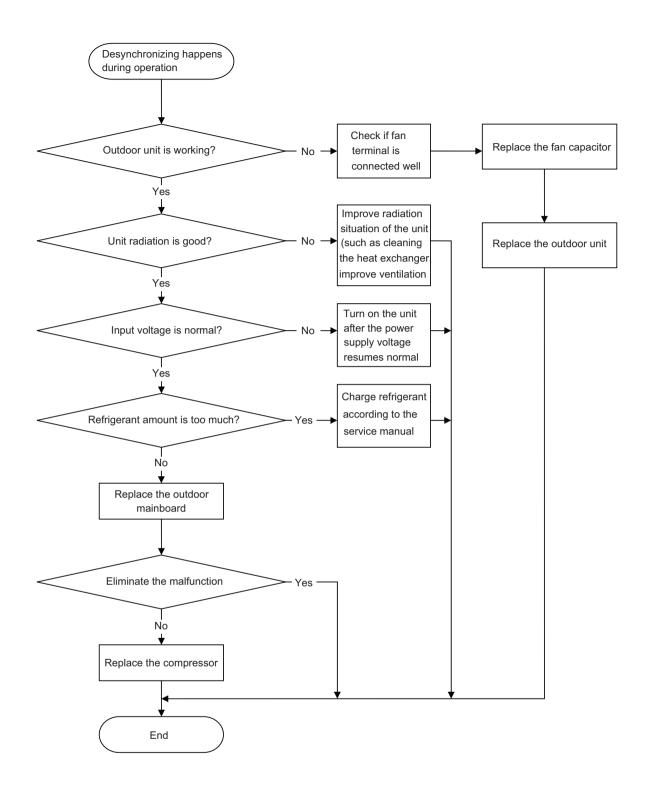

3. Compressor desynchronizing malfunction

Main checking points:

- If the pressure of the system is too high;
- If the eletric expansion valve is working normally or it is broken;
- If the radiation of the unit is good;

Flow chart:

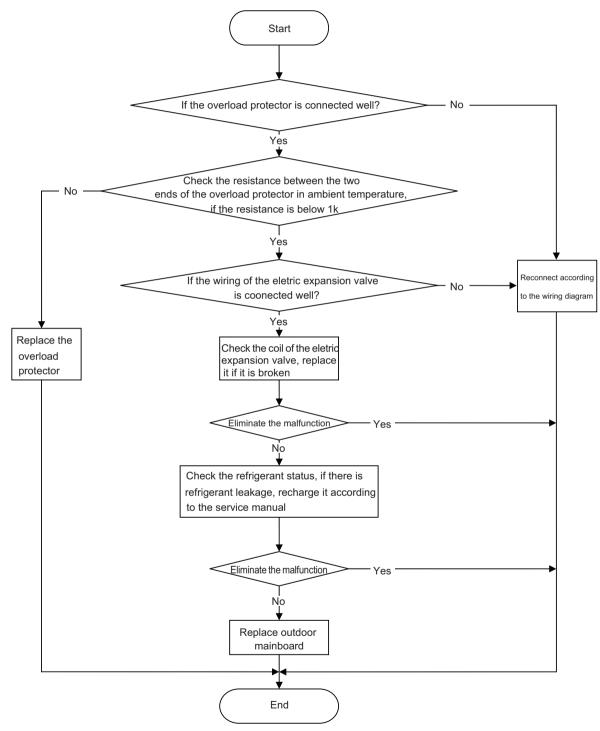

4. Compressor overload, diacharge protectionmalfunction

Main checking points:

- If the eletric expansion valve is connected well or it is broken;
- If there is refrigerant leakage;
- If the overload protector is broken;

Flow chart:

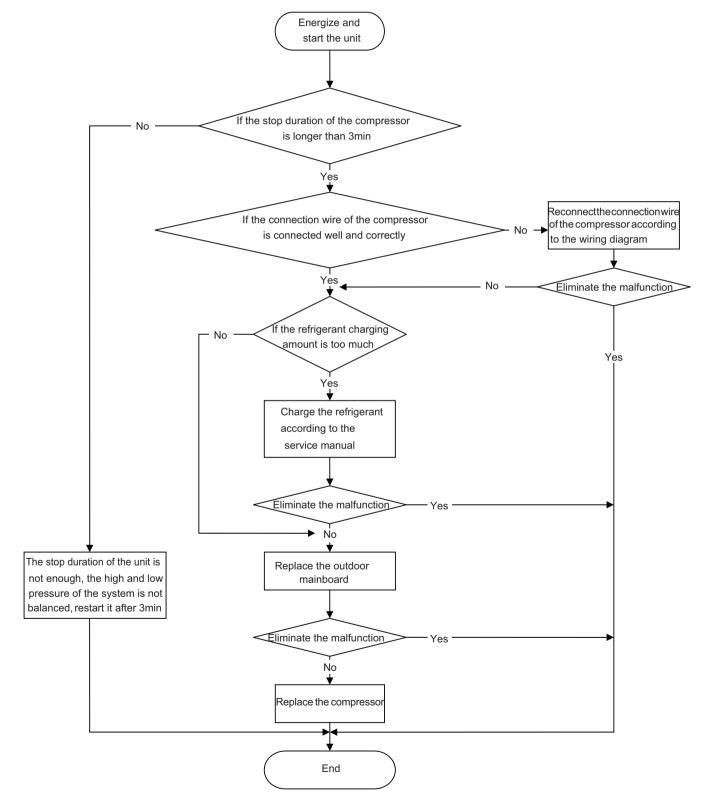

Note: the detection method of the coil of the eletric expansion valve: there is five pieces of coil of the eletric expansion valve, the resistance of one of them (the leftmost or the rightmost one) is almost the same as the resistance of other terminal (within 100Ω). Judge the condition of the electronic expansion valve through detecting these resistance.

5. Start failuremalfunction

Main checking points:

- If the connection wire of the compressor is connected properly;
- If the stop duration of the compressor is sufficient;
- If the compressor is broken;
- If the refrigerant charging amount is too much;

Flow chart:

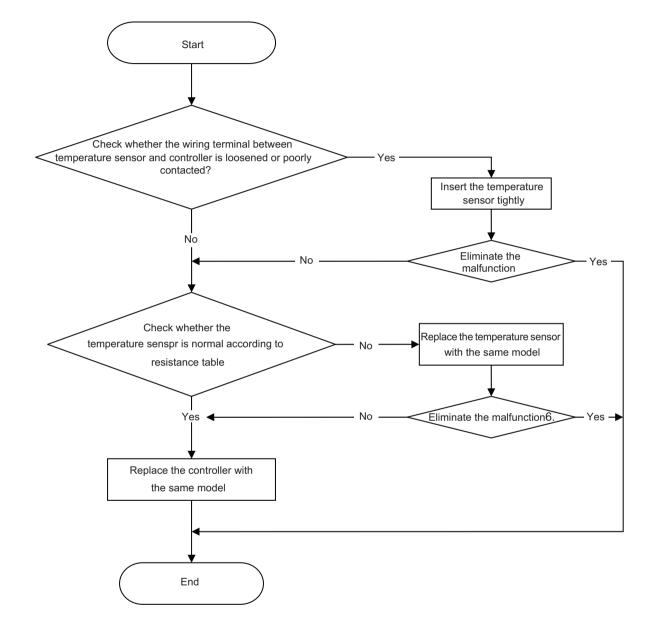

6. Temperature sensor malfunction

Main checking points:

- If the temperature sensor is damaged or broken
- If the terminal of the temperature sensor is loosended or not connected;
- If the mainboard is broken;

Flow chart:

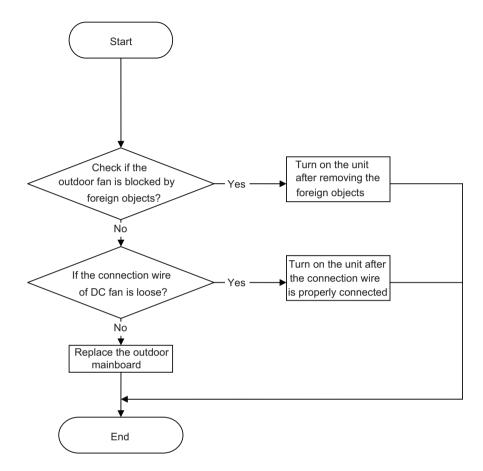

7. DC fan malfunction

Main checking points:

- If the outdoor fan is blocked by foreign objects;
- The connection wire of DC fan is connected reliably? If it is loose?

Flow chart:

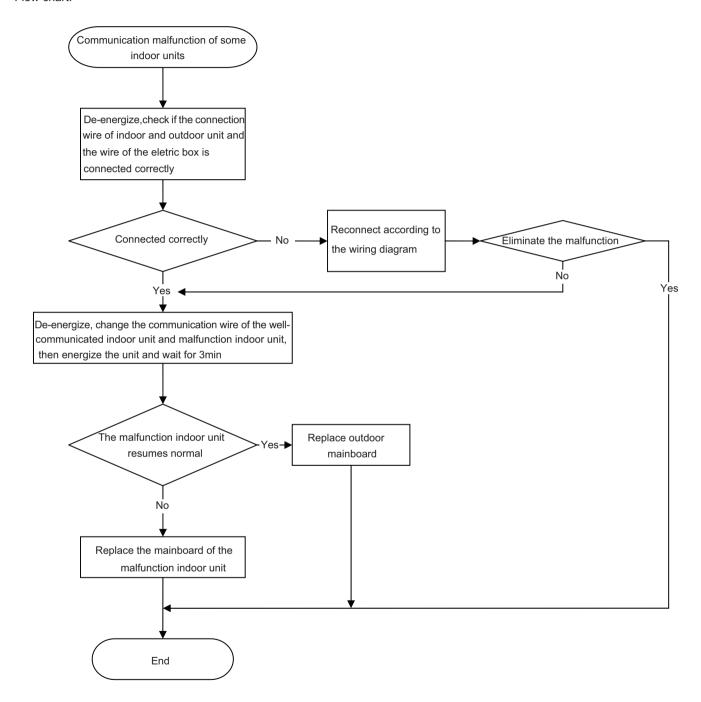

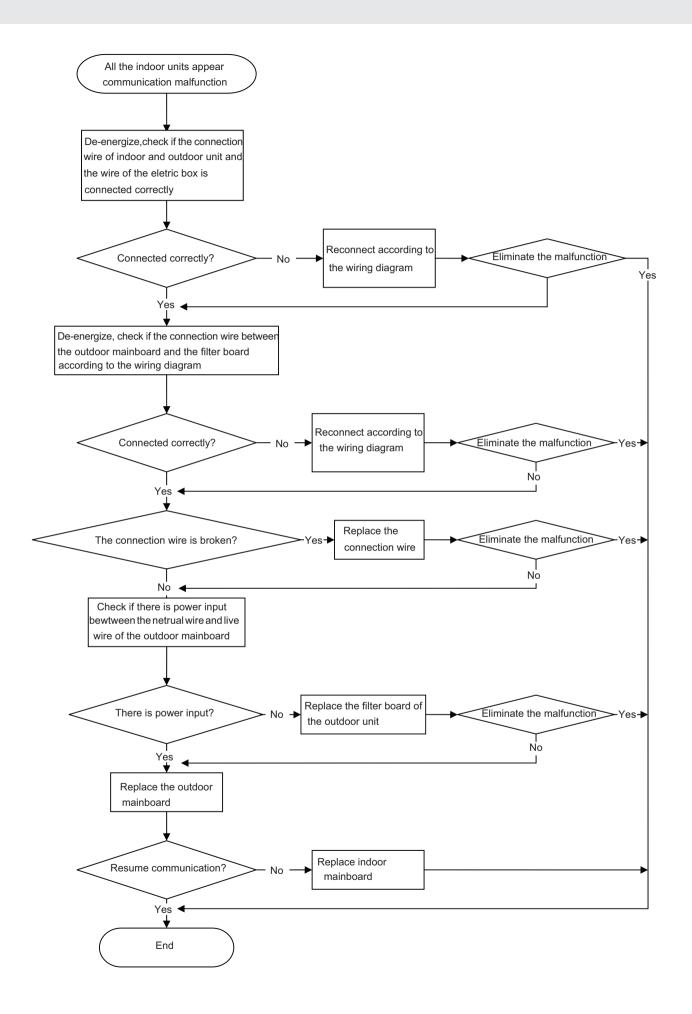

8. Communication malfunction

Main checking points:

- If the connection wire between the indoor unit and outdoor unit is connected well, if the wires inside the unit is connected well;
- If the indoor mainboard or outdoor main board is broken;

Flow chart:

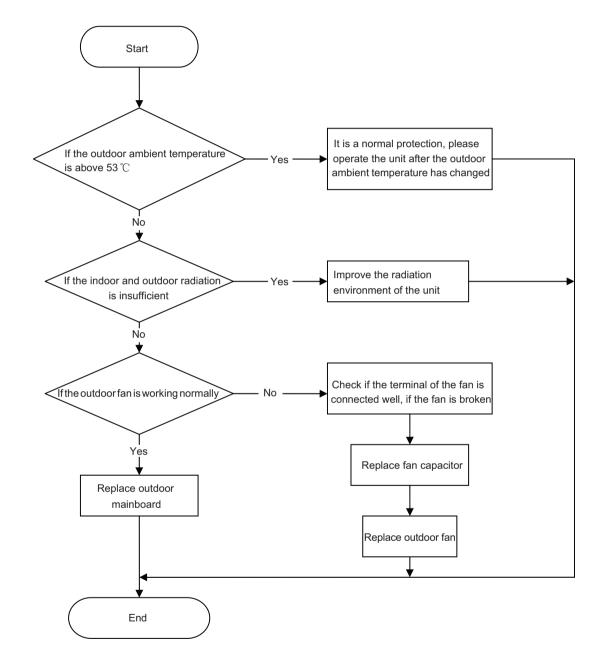

9. Anti-high temperatureand overload malfunction

Main checking points:

- If the outdoor ambient temperature is within the normal range;
- If the indoor fan and outdoor fan are running normally;
- If the indoor and outdoor radiation environment is good;

Flow chart:

9.4 Troubleshooting for Normal Malfunction

1. Air Conditioner Can't be Started Up

Possible Causes	Discriminating Method (Air conditioner Status)	Troubleshooting
for power plug	bright and the buzzer can't give out sound	Confirm whether its due to power failure. If yes, wait for power recovery. If not, check power supply circuit and make sure the power plug is connected well.
Wrong wire connection between indoor unit and outdoor unit, or poor connection for wiring terminals		Check the circuit according to circuit diagram and connect wires correctly. Make sure all wiring terminals are connected firmly
Electric leakage for air conditioner	After energization, room circuit breaker trips off at once	Make sure the air conditioner is grounded reliably Make sure wires of air conditioner is connected correctly Check the wiring inside air conditioner. Check whether the insulation layer of power cord is damaged; if yes, place the power cord.
IIIIDIODEI	After energization, air switch trips off	Select proper air switch
Malfunction of remote controller	After energization, operation indicator is bright, while no display on remote controller or buttons have no action.	Replace batteries for remote controller Repair or replace remote controller

2. Poor Cooling (Heating) for Air Conditioner

Possible Causes	Discriminating Method (Air conditioner Status)	Troubleshooting
Set temperature is improper	Observe the set temperature on remote controller	Adjust the set temperature
Rotation speed of the IDU fan motor is set too low	Small wind blow	Set the fan speed at high or medium
Filter of indoor unit is blocked	Check the filter to see its blocked	Clean the filter
Installation position for indoor unit and outdoor unit is improper	Check whether the installation postion is proper according to installation requirement for air conditioner	Adjust the installation position, and install the rainproof and sunproof for outdoor unit
Refrigerant is leaking	Discharged air temperature during cooling is higher than normal discharged wind temperature; Discharged air temperature during heating is lower than normal discharged wind temperature; Units pressure is much lower than regulated range	Find out the leakage causes and deal with it. Add
Malfunction of 4-way valve	Blow cold wind during heating	Replace the 4-way valve
Malfunction of capillary	Discharged air temperature during cooling is higher than normal discharged wind temperature; Discharged air temperature during heating is lower than normal discharged wind temperature; Unitt pressure is much lower than regulated range. If refrigerant isn't leaking, part of capillary is blocked	Replace the capillary
Flow volume of valve is insufficient	The pressure of valves is much lower than that stated in the specification	Open the valve completely
Malfunction of horizontal louver	Horizontal louver can't swing	Refer to point 3 of maintenance method for details
Malfunction of the IDU fan motor	The IDU fan motor can't operate	Refer to troubleshooting for H6 for maintenance method in details
Malfunction of the ODU fan motor	The ODU fan motor can't operate	Refer to point 4 of maintenance method for details
Malfunction of compressor	Compressor can't operate	Refer to point 5 of maintenance method for details

3. Horizontal Louver Can't Swing

Possible Causes	Discriminating Method (Air conditioner Status)	Troubleshooting
	Check the wiring status according to circuit diagram	Connect wires according to wiring diagram to make sure all wiring terminals are connected firmly
		Repair or replace stepping motor
Main board is damaged	Others are all normal, while horizontal louver can't operate	Replace the main board with the same model

4. ODU Fan Motor Can't Operate

Possible causes	Discriminating method (air conditioner status)	Troubleshooting
Wrong wire connection, or poor connection		Connect wires according to wiring diagram to make sure all wiring terminals are connected firmly
	Measure the capacity of fan capacitor with an universal meter and find that the capacity is out of the deviation range indicated on the nameplate of fan capacitor.	Replace the capacity of fan
	Ivoltage. The voltage is a little fligh of low	
Motor of outdoor unit is damaged	When unit is on, cooling/heating performance is bad and ODU compressor generates a lot of noise and heat.	Change compressor oil and refrigerant. If no better, replace the compressor with a new one

5. Compressor Can't Operate

Possible causes	Discriminating method (air conditioner status)	Troubleshooting
Wrong wire connection, or poor connection		Connect wires according to wiring diagram to make sure all wiring terminals are connected firmly
Capacity of compressor is damaged	Measure the capacity of fan capacitor with an universal meter and find that the capacity is out of the deviation range indicated on the nameplate of fan capacitor.	Replace the compressor capacitor
Power voltage is a little low or high	IVOITAGE. THE VOITAGE IS A TIME HIGH OF TOW	Suggest to equip with voltage regulator
Coil of compressor is burnt out	Use universal meter to measure the resistance between compressor terminals and its 0	Repair or replace compressor
Cylinder of compressor is blocked	Compressor can't operate	Repair or replace compressor

6. Air Conditioner is Leaking

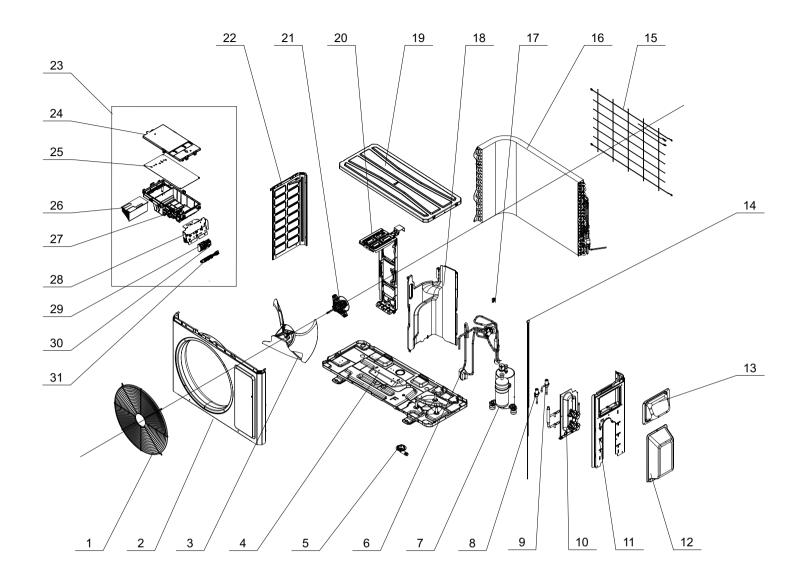

Possible causes	Discriminating method (air conditioner status)	Troubleshooting
Drain pipe is blocked	Water leaking from indoor unit	Eliminate the foreign objects inside the drain pipe
1		Replace drain pipe
Wrapping is not tight	Water leaking from the pipe connection place of indoor unit	Wrap it again and bundle it tightly

7. Abnormal Sound and Vibration

Possible causes	Discriminating method (air conditioner status)	Troubleshooting
When turn on or turn off the unit, the panel and other parts will expand and theres abnormal sound		Normal phenomenon. Abnormal sound will disappear after a few minutes.
When turn on or turn off the unit, theres abnormal sound due to flow of refrigerant inside air conditioner	Water-running sound can be heard	Normal phenomenon. Abnormal sound will disappear after a few minutes.
Foreign objects inside the indoor unit or therere parts touching together inside the indoor unit	Theres abnormal sound fro indoor unit	Remove foreign objects. Adjust all parts position of indoor unit, tighten screws and stick damping plaster between connected parts
together inside the outdoor unit	Theres abnormal sound fro outdoor unit	Remove foreign objects. Adjust all parts position of outdoor unit, tighten screws and stick damping plaster between connected parts
Short circuit inside the magnetic coil	During heating, the way valve has abnormal electromagnetic sound	Replace magnetic coil
Abnormal shake of compressor	Outdoor unit gives out abnormal sound	Adjust the support foot mat of compressor, tighten the bolts
Abnormal sound inside the compressor	Abnormal sound inside the compressor	If add too much refrigerant during maintenance, please reduce refrigerant properly. Replace compressor for other circumstances.

10. Exploded View and Parts List

MULTI18HP230V1EO

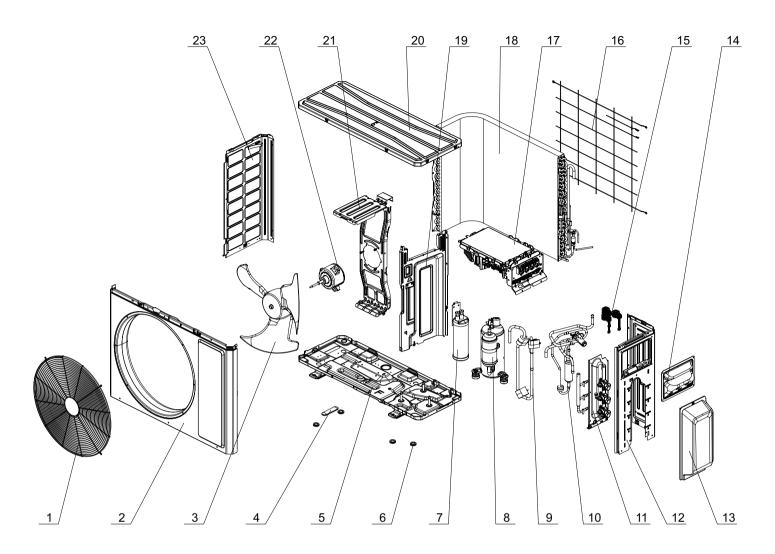

NO.	Description
1	Front Grill
2	Front Panel Assy
3	Axial Flow Fan
4	Chassis Sub-assy
5	Drainage Joint
6	4-Way Valve Assy
7	Compressor and Fittings
8	Electric Expansion Valve Sub-Assy 2
9	Electric Expansion Valve Sub-Assy 1
10	Valve Support Sub-assy
11	Right Side Plate

NO.	Description
12	Valve Cover
13	Handle Assy
14	Temperature Sensor
15	Rear Grill
16	Condenser Assy
17	Tempreture Sensor clamp
18	Clapboard Sub-Assy
19	Top Cover Assy
20	Motor Support Assy
21	Brushless DC Motor
22	Left Side Plate

NO.	Description
23	Electric Box Assy
24	Electric Box Cover
25	Main Board
26	Radiator
27	Electric Box
28	Terminal Board Support sub-assy
29	Terminal Board
30	Terminal Board
31	Wire Clamp

Some models may not contain some parts, please refer to the actual product.

MULTI24HP230V1EO

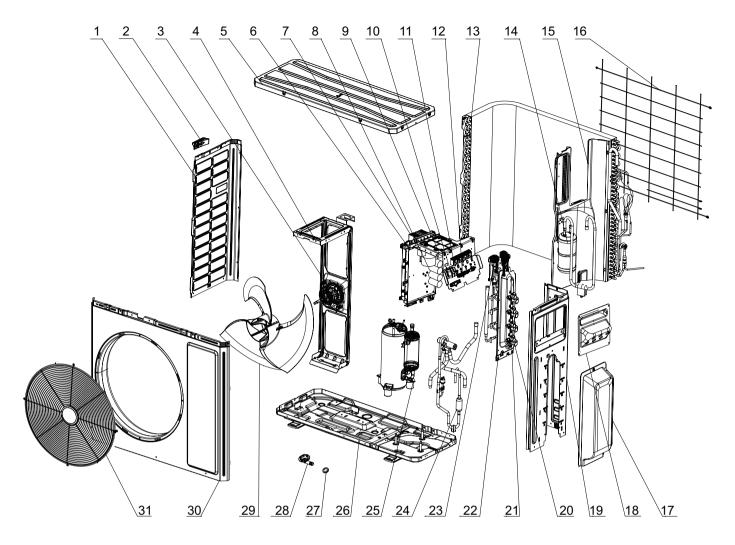

The component is only for rererence; please refer to the actual product.

NO.	Description
1	Front Grill
2	Front Panel
3	Axial Flow Fan
4	Drainage hole Cap
5	Chassis Sub-assy
6	Drainage hole Cap
7	Gas-liquid Separator
8	Compressor and Fittings

NO.	Description
9	Inhalation tube Assy
10	4-Way Valve Assy
11	Valve Support Assy
12	Right Side Plate
13	Valve Cover
14	Handle
15	Electric Expand Valve Fitting
16	Rear Grill

NO.	Description
17	Electric Box Assy
18	Condenser Assy
19	Clapboard Sub-Assy
20	Top Cover Assy
21	Motor Support
22	Brushless DC Motor
23	Left Side Plate

Some models may not contain some parts, please refer to the actual product.

The component is only for rererence; please refer to the actual product.

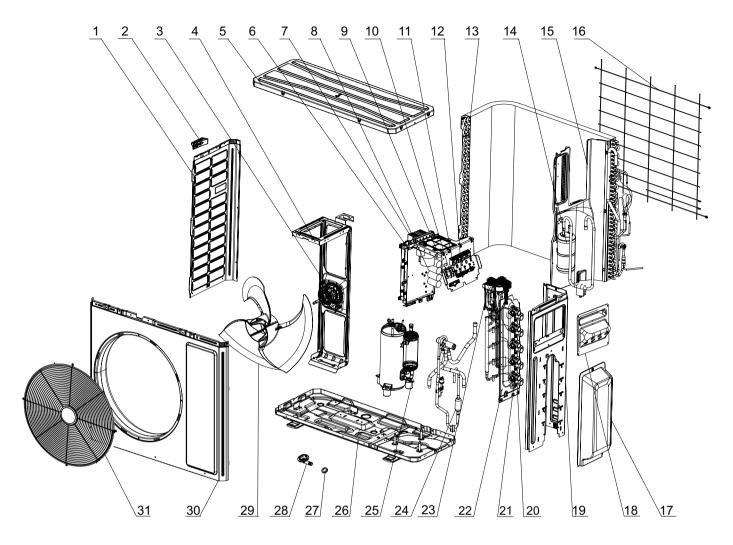

NO.	Description
1	Left Side Plate
2	Handle
3	Brushless DC Motor
4	Motor Support Sub-Assy
5	Top Cover Sub-Assy
6	Electric Box Assy
7	Radiator
8	Main Board
9	Filter Board
10	Terminal Board
11	Terminal Board

NO.	Description
12	Wire Clamp
13	Condenser Assy
14	Gas-liquid Separator Assy
15	Clapboard
16	Rear Grill
17	Valve Cover
18	Handle
19	Right Side Plate
20	Cut off Valve Sub-Assy(1/4)
21	Cut off Valve Sub-Assy(3/8)
22	Valve Support Sub-Assy

NO.	Description
23	Electronic Expansion Valve assy
24	4-Way Valve Assy
25	Compressor and Fittings
26	Chassis Sub-assy

11. Removal Procedure

MULTI24HP230V1EO

Warning: Be sure to wait for a minimum of 20 minutes after turning off all power supplies and discharge the refrigerant completely before removal.

completely before removal. Procedure Step 1. Before disassembly Complete axonometric drawing. 2. Remove valve cover Remove the connection screw fixing the valve cover and then remove the valve cover. valve cover 3. Remove handle Handle

56 Installation and Maintenance

Remove the connection screws fixing the handle and the right side plate, and then remove the handle.

4. Remove top panel

Remove the connection screws connecting the top panel and the front panel, and then remove the top panel.

5. Remove front grille

Remove the connection screws connecting the front grille and the front panel, and then loosen the clasp to remove the front grille.

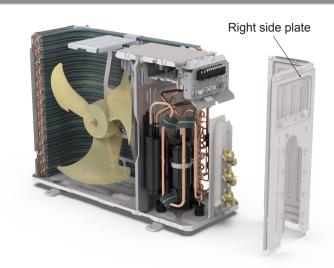

6. Remove front panel

Remove the screws connecting the front panel and then remove the front panel.

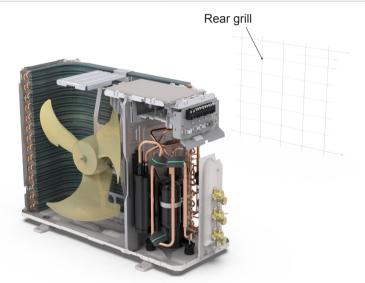

7. Remove right side plate

Remove the screws connecting the right side plate with the chassis and the valve support. Then remove the right side plate.

8. Remove rear grill

Remove the screws connecting the rear grill and left side plate, and then remove the rear grill.

9. Remove left side plate

Remove the screws fixing the left side plate with the chassis and the condenser support, and then remove the left side plate.

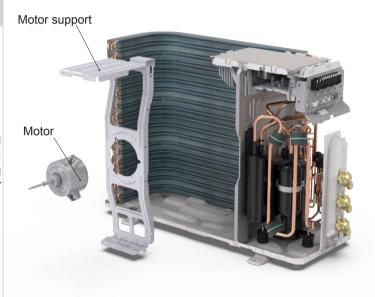

10. Remove axial flow blade

Remove the nut on the blade and then remove the axial flow blade.

11. Remove motor and motor support

Remove the 4 tapping screws fixing the motor and disconnect the leading wire insert of the motor. Then remove the motor. Remove the 2 tapping screws fixing the motor support and chassis, and then lift the motor support to remove it.

12. Remove electric box assy

Remove the screws fixing the electric box assy and the middle isolation sheet, loosen the wire bundle, unplug the wiring terminals, and then lift the electric box assy to remove it.

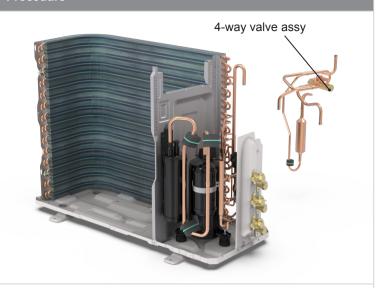

Step

Procedure

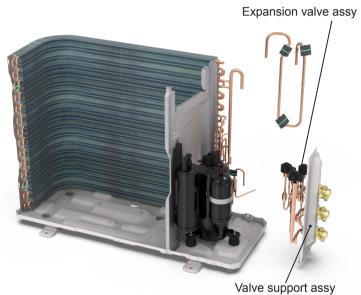

13. Remove 4-way valve assy

Unsolder the welding joint connecting the 4-way valve assy with the cut-off valve and the condenser connection pipe, and then remove the 4-way valve assy.

14. Remove valve support sub-assy and expansion valve assy

Remove the screw connecting the valve support and the chassis, and then remove the valve support assy. Unsolder the welding joint connecting the electronic expansion valve assy with the cut-off valve and the condenser connection pipe, and then remove the expansion valve assy.

15. Remove middle isolation sheet

Remove the screws connecting the middle isolation sheet with the chassis assy and the condenser assy, and then remove the middle isolation sheet.

Step Procedure 16. Remove compressor Compressor Remove the 3 foot nuts fixing the compressor and then remove the compressor. 17. Remove condenser assy Condenser assy Remove the screws fixing the condenser support and then remove the condenser support. Remove the screws connecting the condenser support and the chassis assy, and then remove the condenser assy. Support

Warning: Be sure to wait for a minimum of 20 minutes after turning off all power supplies and discharge the refrigerant completely before removal.

Step Procedure

1. Before disassembly

Complete axonometric drawing.

2. Remove valve cover

Remove the connection screw fixing the valve cover and then remove the valve cover.

3. Remove handle

Remove the connection screws fixing the handle and the right side plate, and then remove the handle.

4. Remove top panel

Remove the connection screws connecting the top panel and the front panel, and then remove the top panel.

5. Remove front grille

Remove the connection screws connecting the front grille and the front panel, and then loosen the clasp to remove the front grille.

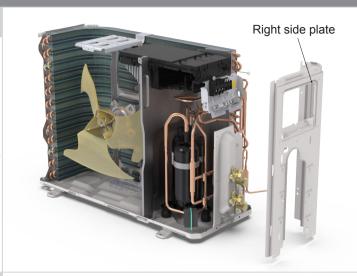

6. Remove front panel

Remove the screws connecting the front panel and then remove the front panel.

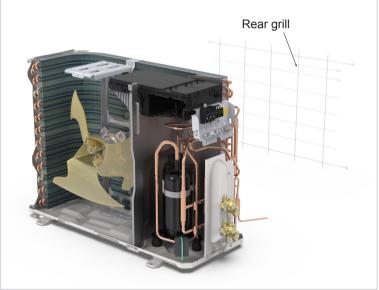

7. Remove right side plate

Remove the screws connecting the right side plate with the chassis and the valve support. Then remove the right side plate.

8. Remove rear grill

Remove the screws connecting the rear grill and left side plate, and then remove the rear grill.

9. Remove left side plate

Remove the screws fixing the left side plate with the chassis and the condenser support, and then remove the left side plate.

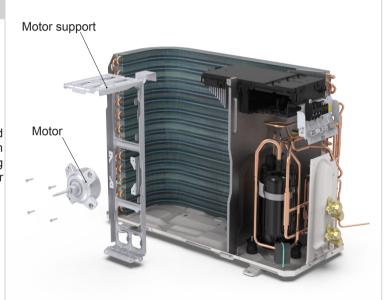

10. Remove axial flow blade

Remove the nut on the blade and then remove the axial flow blade.

11. Remove motor and motor support

Remove the 4 tapping screws fixing the motor and disconnect the leading wire insert of the motor. Then remove the motor. Remove the 2 tapping screws fixing the motor support and chassis, and then lift the motor support to remove it.

12. Remove electric box assy

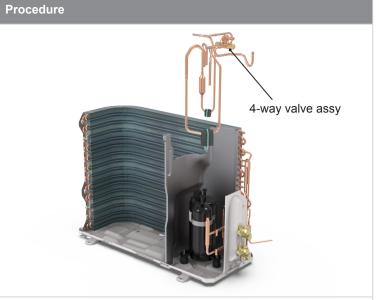

Remove the screws fixing the electric box assy and the middle isolation sheet, loosen the wire bundle, unplug the wiring terminals, and then lift the electric box assy to remove it.

Step

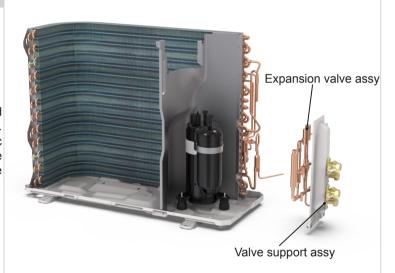

13. Remove 4-way valve assy

Unsolder the welding joint connecting the 4-way valve assy with the cut-off valve and the condenser connection pipe, and then remove the 4-way valve assy.

14. Remove valve support sub-assy and expansion valve assy

Remove the screw connecting the valve support and the chassis, and then remove the valve support assy. Unsolder the welding joint connecting the electronic expansion valve assy with the cut-off valve and the condenser connection pipe, and then remove the expansion valve assy.

15. Remove middle isolation sheet

Remove the screws connecting the middle isolation sheet with the chassis assy and the condenser assy, and then remove the middle isolation sheet.

16. Remove compressor

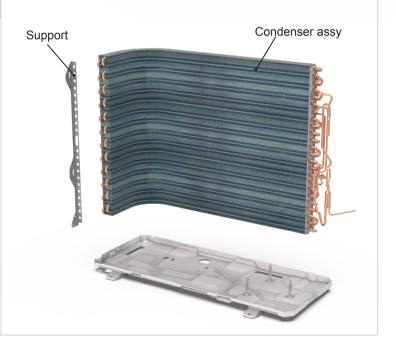

Compressor

Remove the 3 foot nuts fixing the compressor and then remove the compressor.

17. Remove condenser assy

Remove the screws fixing the condenser support and then remove the condenser support.

Remove the screws connecting the condenser support and the chassis assy, and then remove the condenser assy.

Warning: Be sure to wait for a minimum of 20 minutes after turning off all power supplies and discharge the refrigerant completely before removal.

Step Procedure

1. Before disassembly

Complete axonometric drawing.

2. Remove valve cover

Remove the connection screw fixing the valve cover and then remove the valve cover.

3. Remove handle

Remove the connection screws fixing the handle and the right side plate, and then remove the handle.

Step

Procedure

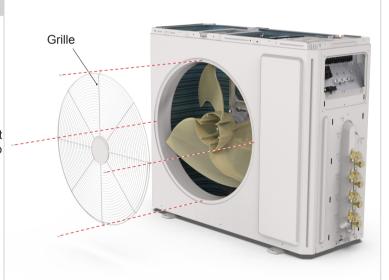

4. Remove top panel

Remove the connection screws connecting the top panel and the front panel, and then remove the top panel.

5. Remove front grille

Remove the connection screws connecting the front grille and the front panel, and then loosen the clasp to remove the front grille.

6. Remove front panel

Remove the screws connecting the front panel and then remove the front panel.

7. Remove rear grill

Remove the screws connecting the rear grill and left side plate, and then remove the rear grill.

8. Remove right side plate

Remove the screws connecting the right side plate with the chassis and the valve support. Then remove the right side plate.

9. Remove left side plate

Remove the screws fixing the left side plate with the chassis and the condenser support, and then remove the left side plate.

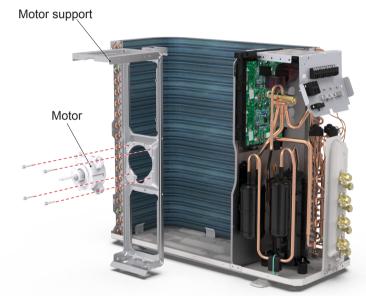

10. Remove axial flow blade

Remove the nut on the blade and then remove the axial flow blade.

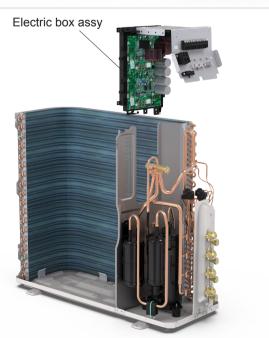

11. Remove motor and motor support

Remove the 4 tapping screws fixing the motor and disconnect the leading wire insert of the motor. Then remove the motor. Remove the 2 tapping screws fixing the motor support and chassis, and then lift the motor support to remove it.

12. Remove electric box assy

Remove the screws fixing the electric box assy and the middle isolation sheet, loosen the wire bundle, unplug the wiring terminals, and then lift the electric box assy to remove it.

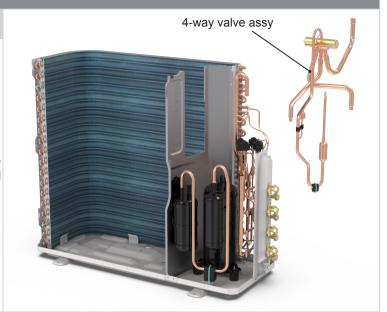

Step

Procedure

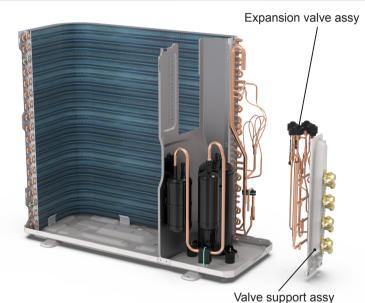

13. Remove 4-way valve assy

Remove screws fixing the electricbox; loosen the wire bundle; pull out the wiring terminals and then pull electric box upwards to remove it.

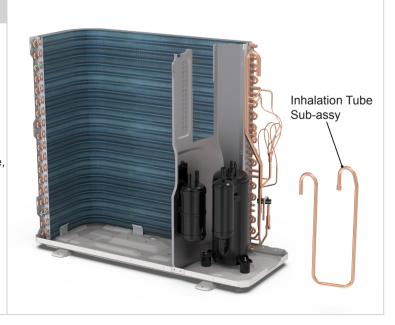

14. Remove valve support sub-assy and expansion valve assy

Remove the screw connecting the valve support and the chassis, and then remove the valve support assy. Unsolder the welding joint connecting the electronic expansion valve assy with the cut-off valve and the condenser connection pipe, and then remove the expansion valve assy.

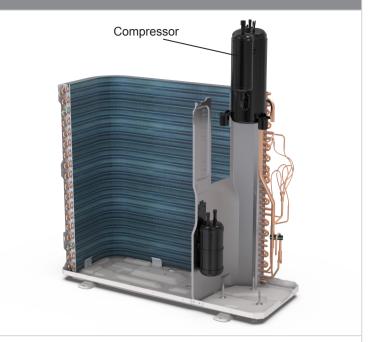

15. Remove Inhalation Tube Sub-assy

Remove all spot welds connected with Inhalation Tube, and then remove the clnhalation Tube Sub-assy.

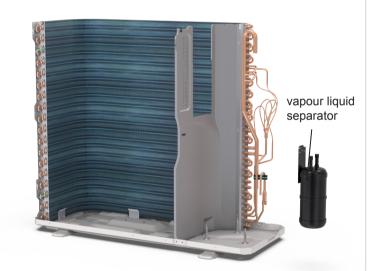

16. Remove compressor

Remove the 3 foot nuts fixing the compressor and then remove the compressor.

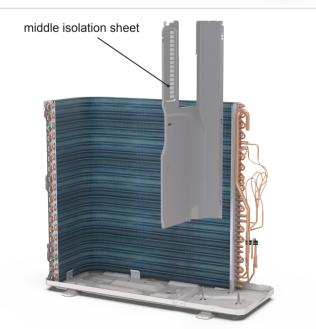

17. Remove vapour liquid separator

Remove the screw connecting the vapour liquid separator, then remove the vapour liquid separator.

18. Remove middle isolation sheet

Remove the screws connecting the middle isolation sheet with the chassis assy and the condenser assy, and then remove the middle isolation sheet.

Remove the screws fixing the condenser support and then remove the condenser support.
Remove the screws connecting the condenser support and the chassis assy, and then remove the condenser assy.

Warning: Be sure to wait for a minimum of 20 minutes after turning off all power supplies and discharge the refrigerant completely before removal.

Step Procedure

1. Before disassembly

Complete axonometric drawing.

2. Remove handle

Remove the connection screws fixing the handle and the right side plate, and then remove the handle.

3. Remove valve cover

Remove the connection screw fixing the valve cover and then remove the valve cover.

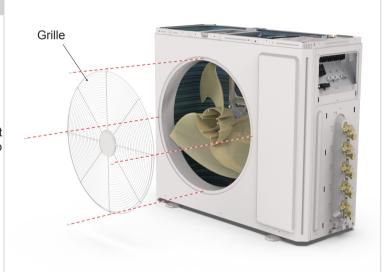

4. Remove top panel

Remove the connection screws connecting the top panel and the front panel, and then remove the top panel.

5. Remove front grille

Remove the connection screws connecting the front grille and the front panel, and then loosen the clasp to remove the front grille.

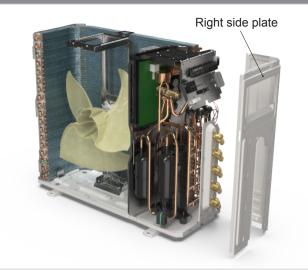

6. Remove front panel

Remove the screws connecting the front panel and then remove the front panel.

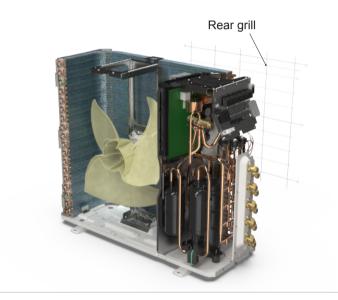

7. Remove right side plate

Remove the screws connecting the right side plate with the chassis and the valve support. Then remove the right side plate.

8. Remove rear grill

Remove the screws connecting the rear grill and left side plate, and then remove the rear grill.

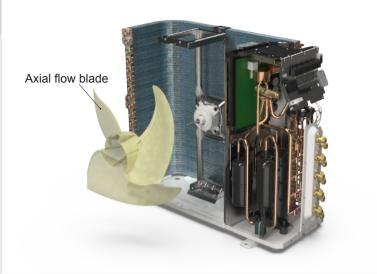

9. Remove left side plate

Remove the screws fixing the left side plate with the chassis and the condenser support, and then remove the left side plate.

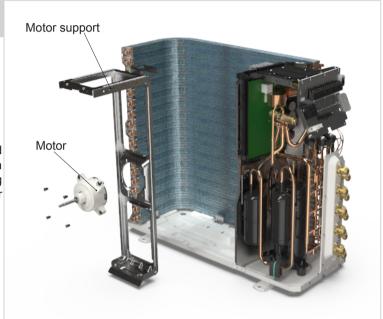

10. Remove axial flow blade

Remove the nut on the blade and then remove the axial flow blade.

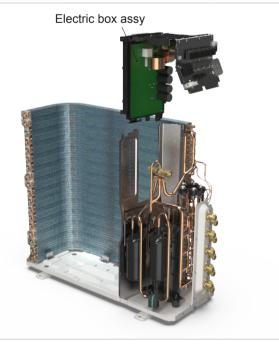

11. Remove motor and motor support

Remove the 4 tapping screws fixing the motor and disconnect the leading wire insert of the motor. Then remove the motor. Remove the 2 tapping screws fixing the motor support and chassis, and then lift the motor support to remove it.

12. Remove electric box assy

Remove the screws fixing the electric box assy and the middle isolation sheet, loosen the wire bundle, unplug the wiring terminals, and then lift the electric box assy to remove it.

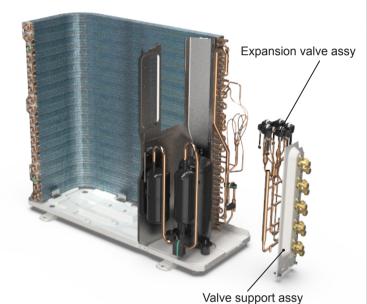

13. Remove 4-way valve assy

Remove screws fixing the electricbox; loosen the wire bundle; pull out the wiring terminals and then pull electric box upwards to remove it.

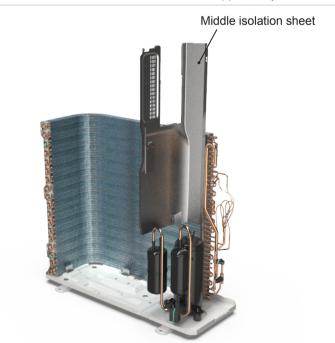

14. Remove valve support sub-assy and expansion valve assy

Remove the screw connecting the valve support and the chassis, and then remove the valve support assy. Unsolder the welding joint connecting the electronic expansion valve assy with the cut-off valve and the condenser connection pipe, and then remove the e xpansion valve assy.

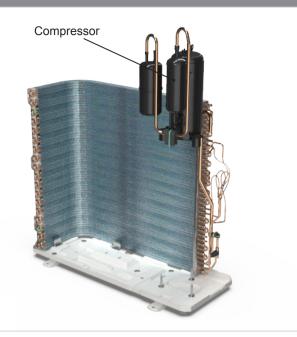

15. Remove middle isolation sheet

Remove the screws connecting the middle isolation sheet with the chassis assy and the condenser assy, and then remove the middle isolation sheet.

16. Remove compressor

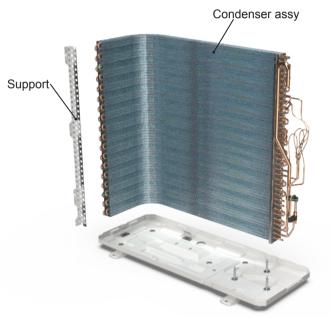

Remove the 3 foot nuts fixing the compressor and then remove the compressor.

17. Remove condenser assy

Remove the screws fixing the condenser support and then remove the condenser support.

Remove the screws connecting the condenser support and the chassis assy, and then remove the condenser assy.

Appendix 2: Pipe Expanding Method

⚠ Note:

Improper pipe expanding is the main cause of refrigerant leakage. Please expand the pipe according to the following steps:

A:Cut the pip

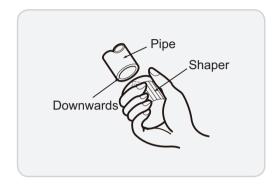

- Confirm the pipe length according to the distance of indoor unit and outdoor unit.
- Cut the required pipe with pipe cutter.

B:Remove the burrs

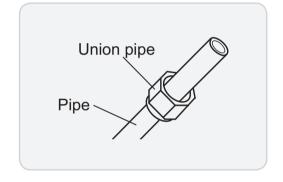

• Remove the burrs with shaper and prevent the burrs from getting into the pipe.

C:Put on suitable insulating pipe.

D:Put on the union nut

• Remove the union nut on the indoor connection pipe and outdoor valve; install the union nut on the pipe.

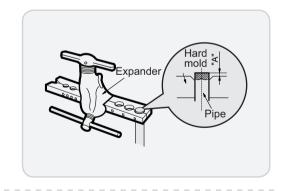

E:Expand the port

• Expand the port with expander.

⚠ Note:

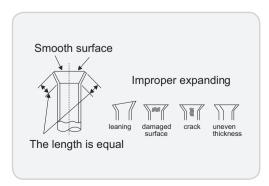

• "A" is different according to the diameter, please refer to the sheet below:

Outer diameter/mm)	A(mr	n)
Outer diameter(mm)	Max	Min
Ф6 - 6.35 (1/4")	1.3	0.7
Ф9 - Ф9.52 (3/8")	1.6	1.0
Ф12 - 12.70 (1/2")	1.8	1.0
Ф16 - 15.88 (5/8")	2.4	2.2

F:Inspection

• Check the quality of expanding port. If there is any blemish, expand the port again according to the steps above.

Appendix 3: List of Resistance for Temperature Sensor
